Until a fixed capital was established at ↗Gondär in the 17th cent., the medieval imperial G. was characterized by its mobility. European visitors describe a remarkable tented capital that moved around the highlands from one place to another. This system had two main functions: first, it enabled the emperors to maintain control over the dispersed provinces of the empire through their own physical presence; and second, it spread the economic burden of maintaining the central G., which could scarcely have remained permanently in the same place without exhausting local supplies. At the same time, it prevented the development of any institutional structure of G. that was in any way separate from the person of the emperor: the G. moved with him and was dependent on him. The physical lay-out of the imperial camp was clearly organized: as soon as the emperor's tent was pitched, all the subordinate officials knew where their own accommodation would be. There was also a complex set of titles and offices, including the ↗*ṣähafe təʿəzaz*, the ↗*afä nəguś* and the ↗*liqä mäkʷas*. However, these remained individual positions, in the gift of the emperor, and did not lead to the creation of any permanent bureaucracy.

The establishment of a permanent capital at Gondär under *aṣe* ↗Fasilädäs, from 1636 onwards, did little to change this pattern of G. One significant factor was that this coincided with a decline, both in the territory and resources that the empire controlled, and in the authority of the emperors. It followed the destruction of the empire as a result of the invasions of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") in the early 16th cent. and the steady encroachment of the ↗Oromo peoples on areas previously controlled by the empire. It also coincided with the internal divisions prompted by the arrival of ↗Portuguese missionaries and their attempts to convert leading elements to ↗Catholicism. A further consequence of the Gondärine monarchy was the increasing inability of the emperors to control the outlying provinces, a trend that was most visible in ↗Šäwa, in ↗Təgray and elsewhere. Whereas previously, emperors had travelled around the highlands in order to control subordinate rulers, now the provincial lords – such as *ras* ↗Mikaʾel Səḥul of Təgray – brought their own armies to Gondär in order to intimidate and control the emperor. This process culminated in the ↗*Zämänä mäsafənt* (1770-1855) when no Ethiopian central G. existed.

History after 1855

Introduction

The increasing encroachment of European powers on Ethiopia from the mid-19th cent. onwards led successive Ethiopian G. to reorganize their own structures so as to enable them to cope more effectively with the new demands that were being made on them – initially very largely in order to manage relations with foreign G. and the increasing number of foreigners who came to live in Ethiopia, but also and increasingly to promote economic, social and political changes. These changes were invariably introduced under the close supervision and control of the existing political authorities, notably the emperors, and were never permitted to challenge their powers, at least until the moment when the forces of modernity, established in the newly created state institutions, superseeded the imperial system of G. itself. Before that time, however, modern political institutions were intended to increase the powers of the emperors by providing them with trained staff and effective organizations.

The first emperor to appreciate the need for change in the way in which the G. worked was ↗Tewodros II, who availed himself of the services of foreign advisers. These did not, however, establish any new G. institutions. ↗Yoḥannəs IV made much more sparing use of such advisers. ↗Mənilək II, who had a much more acute sense of Ethiopia's need to adapt to the demands of the outside world, recruited a number of advisers, by far the most important of whom was the Swiss engineer Alfred ↗Ilg, who was given the traditional title of ↗*bit wäddäd* and the more modern one of Chancellor of State. Ilg was extensively involved in diplomatic correspondence and conducting negotiations with foreign powers.

Government Institutions, 1907–35

The formal appointment of G. ministers dates from 1907, when Mənilək created Ministers of Justice, War, Interior, Commerce and Foreign Affairs, Finance, Agriculture, the Pen, Public Works and the Imperial Court. In some cases, notably *ṣähafe təʿəzaz*, who became "Minister of the Pen", this involved only giving a new title to an existing office. Similarly, the *afä nəguś* became Minister of Justice. A Minister of Posts and Telegraphs was appointed later. Several of these men, such as the Minister of War *fitawrari* ↗Habtä Giyorgis, were powerful in their own right, but becoming ministers did little to increase their power. There were no ministries, in the sense of G. bureaucracies, for them to direct and they had little idea of their responsibilities. Maḥtämä Śəllase's report that the Minister of Posts and Telegraphs was responsible for delivering telegrams to the emperor indicates how subordinate their role was. In a wider political sense, the ministers were unable to compensate for the declining effectiveness of the central G. as Mənilək himself became increasingly unable to rule. They were included in the ↗Crown Council that in 1909 was established to govern on the emperor's behalf, but the most influential roles in the ensuing struggle for the succession were played by those with military forces at their disposal.

During the following seven years, ministers are frequently referred to in the diplomatic correspondence and were appointed or dismissed in accordance with the changing balance of power among the factions who competed for control over the G. There is, however, no indication that they exercised any significant powers that could be related to their offices, rather than to the influence that they held as individuals. G. remained as before a matter of personalities rather than institutions.

After *ləǧ* ↗Iyasu's overthrow in October 1916, the situation became more conducive to the construction of G. institutions, largely because these suited the ambitions of *ras* Täfäri Mäkʷännən, who sought to establish a control over G. that would be independent of the Empress ↗Zäwditu. Whereas the ministers, who had become a constraint on Täfäri's power, were all dismissed in March 1918, he appointed younger officials, including ↗Ḫəruy Wäldä Śəllase and ↗Täklä Wäldä Hawaryat, to the Addis Abäba municipality and tax-collecting officials with the rank of ↗*näggadras* to the leading commercial centres. During the 1920s and early 1930s, the outlines of a modern administrative system became increasingly clear as permanent offices were established and newly educated Ethiopians were appointed to staff them. Several of these, including ↗Mäkʷännən Habtäwäld at Finance and ↗Wäldä Giyorgis Wäldä Yoḥannəs at the Ministry of the Pen, would become leading ministers after 1941. Greatest attention was paid to the ministries of Foreign Affairs, where Ḫəruy Wäldä Śəllase became Director-General in 1927 and later Minister, Commerce, Finance, and Posts and Telegraphs, all of which were closely associated with Ethiopia's relations with the outside world. By the early 1930s, there were foreign advisers at the Ministries of Finance, Foreign Affairs, Interior and Justice and at the newly established Ministry of Education.

The 1931 Constitution led to the creation of Ethiopia's first formal legislative institutions, with a two-chamber Parliament consisting of the Senate (የሕግ፡ መወሰኛ፡ ምክር፡ ቤት, *yäḥəgg mäwässäñña məkər bet*), which was appointed directly by the Emperor, and the Chamber of Deputies (የሕግ፡ መምሪያ፡ ምክር፡ ቤት, *yäḥəgg mämriya məkər bet*) which, "temporarily, and until the people are in a position to elect them themselves" (Art. 32), was to be chosen by the nobility and local chiefs. Both constitutionally and in practice, these had only limited powers. Practically, this constitution reasserted the Emperor's status. It reserved imperial succession to the line of ↗Ḫaylä ŚəllaseI and declared that "the person of the emperor is sacred, his dignity inviolable and his power indisputable". For all practical purposes, command over central and local government, the legislature, the judiciary, and the military remained with the *nəguśä nägäśt*. The constitution was essentially an effort to provide a legal basis for replacing the traditional provincial rulers with appointees loyal to the emperor and the process was put in motion to limit the power of the regional nobility, and to enhance reliance on modern bureaucratic forms of administration.

The Structure of Imperial Government, 1941–74
Ḫaylä Śəllase's modernization efforts were temporarily halted with the ↗Italian war of 1935/36 (↗Africa Orientale Italiana; ↗Colonialism). The liberation from Italian rule in 1941 provided the opportunity to establish a structure of G. that survived in its basic form until the 1974 ↗revolution and in important respects well beyond then. An official G. gazette, ↗*Nägarit Gazeta*, was first published in March 1942 and carried all legislation, together with orders regulating the powers of G. agencies, and other information including official appointments. The Ministers (Definition of Powers) Order of 29 January 1943 formally established the Council of Ministers and laid down the powers of the different ministries. These were the Ministries of Agriculture, Commerce and Industry, Communications and Public Works, Education and Fine Arts, Finance, Foreign Affairs, Interior, Justice, the Pen, Posts, Telegraphs and Telephones and War. There was also a Minister of the Imperial Court, but this did not have any assigned duties under the Order. The Office of Prime Minister, not provided for in the original Order, was established on 30 September 1943 and *ras bitwäddäd* ↗Mäkʷännən Ǝndalkaččäw was appointed to it.

A Ministry of Public Health was established on 30 March 1948 and on 25 September 1953 the Ministry of War became the Ministry of National Defence. Ministries of Pensions, Stores and Supplies (abolished in 1964), National Community Development, Mines and State Domains (1958) and Information were also set up during the 1950s. Ministries of Land Reform and of Planning and Development were created in July 1966.

The Emperor continued to take the main role in the day-to-day management of the G. and the most powerful individuals and institutions were those most close to him. During the period between 1941 and 1955, the most important minister was the Minister of the Pen, *ṣähafe təʿəzaz*

Wäldä Giyorgis Wäldä Yoḥannəs, rather than the Prime Minister, who had a largely ceremonial role. Subsequently, in 1959, an institution called His Imperial Majesty's Private Cabinet was created to provide a secretariat for the Emperor, independent of the ministers; but this declined in power after one of its leading members, ↗Wärqənäh Gäbäyyähu, was killed fighting for the rebels during the abortive Coup d'état of December 1960. Another institution, the Crown Council, was formally recognized by the Revised Constitution of 1955, in which it was given sensitive powers relating to the possible incapacity of the Emperor or the Crown Prince and the establishment of a regency. There is little evidence that this played any significant role.

The first Prime Minister, ↗Mäkʷännən Əndalkaččäw, held office until 1957, when he was appointed President of the Senate. His successor was ↗Aklilu Habtäwäld, previously Minister of Foreign Affairs and one of three influential brothers, the eldest of whom was Mäkʷännən Habtäwäld, long-time Minister of Commerce. Until 1961, Aklilu was designated only as acting Prime Minister and the Minister of Defence, *ras* ↗Abbäbä Arägay, presided over meetings of the Council of Ministers. Following *ras* Abbäbä's assassination (along with Mäkʷännən Habtäwäld and other leading officials) during the attempted coup, Aklilu became full Prime Minister in early 1961 and held office through until February 1974. In April 1966, the Prime Minister's powers were enhanced by giving him the power to choose and dismiss the other ministers, but in practice this made little difference to the composition of the G., which was drawn from a small group of courtier-politicians, none of whom had any source of power independent of the Emperor.

In addition to the ministries, the imperial G. established a large number of specialized agencies. The best known of these was ↗Ethiopian Airlines, established in 1948, while other agencies in the area of communications and public works included the Ethiopian Electric Light and Power Authority (1956), the Imperial Board of Telecommunications of Ethiopia (1952) and the Imperial Highway Authority (1951). Further specialist organizations were responsible for specific areas of economic management, including the Tobacco (1942), Grain (1950), and Coffee Boards (1957) and the Awaš Valley Authority (1962). These were generally under the supervision of a board of directors, consisting largely of ministers whose responsibilities most closely related to the work of the agency concerned, together with a number of technical experts and were placed under the executive control of a director or general manager. They also provided a mechanism through which foreigners could be given responsibilities beyond a status of advisors.

The ↗Parliament established under the 1931 Constitution was revived after 1941, but exercised no discernible power, its most visible manifestation being its ceremonial annual opening by the Emperor in November each year. Until 1957, there were five Deputies for each province and a total of about 30 Senators. Under the Revised Constitution of 1955, the Chamber of Deputies was for the first time directly elected, while the Senate continued to be appointed by the Emperor and Parliament's powers were increased; it now had to approve legal proclamations and the budget, although decrees could be promulgated by the Emperor while Parliament was not sitting, subject to its later approval. The executive remained exclusively under the Emperor's control and matters concerning the internal organization of the G. were regulated by imperial orders, which did not require parliamentary approval.

The first direct elections to the Chamber of Deputies were held in 1957 and these followed at four-year intervals until the 1974 revolution. However, no political parties were formed, even though these were not explicitly prohibited, and elections at the constituency level were contested on the basis of personalities. The Senate served largely as a place of semi-retirement for distinguished former officials, and despite attempts to increase the role of Parliament by a number of ambitious deputies, which extended to the occasional rejection or amendment of G. legislation, it remained marginal to the political process.

The most significant legislative change was the codification process, carried out under the supervision of a Codification Commission established in 1954 (↗Criminal codes; Maritime Code; ↗Civil Code; ↗Commercial Law; ↗Criminal Procedure Code; ↗Law and Judiciary). From early forms of arbitration, which were still kept active and encouraged particularly for the rural areas (↗Customary law), a legal system developed gradually into a formal system.

The structure of provincial G. was also thoroughly reorganized after the liberation. Under a decree of August 1942, the national territory

Inaugural meeting of the Council of Ministers in April 1966 headed by Ḫaylä Śəllase I; from ClapHS 130

was divided into twelve regions or *ṭəqlay gəzat*: Arsi, Bägemdər-Səmen, Gamo Gofa, Goǧǧam, Harärge, Illubabor, Käfa, Šäwa, Sidamo, Təgray, Wälläga and Wällo, each subject to a Governor appointed by the Emperor. Bale region was subsequently created from the part of Harärge between the Ganaalee and Wäbi Šäbälle rivers, while ↗Eritrea, which had a special status as a self-governing unit at the time of its unification with the rest of Ethiopia in 1952, was made an ordinary *ṭəqlay gəzat* in 1962. Each *ṭəqlay gəzat* was placed under an ↗*əndärase* (deputy governor) in the case of commoners holding the position and *ṭəqlay gäž* (governors-general) in the case of aristocrats ruling the provinces, all appointed directly by Ḫaylä Śəllase. Each province was subdivided into *awraǧǧa* (sub-provinces), *wäräda* (districts), and *məkəttəl wäräda* (subdistricts). This structure remained broadly intact until the introduction of the short-lived Constitution of 1987 (↗Administrative division).

During Ḫaylä Śəllase's reign, "modern" aspects of G. ruled mainly only in the centre, both geographically and socially. In distant regions, the *əndärase* continued often to rule as in the times of Mənilək and in the villages the nobility kept its privileges and allowed little or no recourse to the law or the modern court system. As long as they paid their tribute and did not rebel, villages were largely untouched by any aspect of modern G. Ḫaylä Śəllase knew his rule depended on the support of the local nobility and allowed them to continue their own way. Even in Addis Abäba, the poor were hardly reached by any aspect of modern law. But the land-owners class and local nobility tried to expand privileges and rights.

After his return from exile, Ḫaylä Śəllase enacted new laws establishing "freehold" as a first form of private property on land. Courts began to accept payment of land taxes as proof of ownership and the local nobility was quick to grasp the chance: collecting as before the state tax from the peasants together with their tributes, they made sure to keep tax receipts in their own names. Peasants, unaware of this change, saw how landlords put their lands on sale or brought them as a share into a "joint venture" with foreign investors. Only when peasants were told to leave, did they realize that they had been effectively disowned of their inherited claims to the use of land (Pausewang 1983:46, 81).

Centralization

Centralization of G. drew the nobility increasingly into the centre, to join the court, staff the administration and lead the growing standing army. Many of them left their local functions unattended to join the new G. structures in the centre. But they kept their local privileges, in particular their rights to tributes from "their" peasants who, by this, had to finance the expensive urban life of the nobility. This happened not only in the southern provinces, conquered by Mənilək, but also in the ↗*rəst* areas in the north. This indirect shift of resources to the centre must be seen economically as a central part of Ḫaylä Śəllase's reforms: it allowed to build up a modern administration in the centre at the expense of the peasants.

A standing military force was built up in a system of different units balancing each other: the standing army was the ↗Imperial Body Guard, the reserve forces of a "territorial army", the Air Force and the small naval force. In the civilian G., Ḫaylä Śəllase balanced in an equally thorough fashion the ambitions and animosities of his ministers and civil servants against each other. Frequent reshuffles did not allow any group to become too strong, a balance of powers being the most important weapon for the Emperor to safeguard his control.

The attempted Coup d'etat of 1960 showed the importance of such precautions. Profiting from an absence of the Emperor on a state visit abroad, the Imperial Body Guard attempted to form a new G. Aided by university students, the leaders tried to convince other military units and the public at large of the need to establish a new rule. But the regular army remained loyal to the Emperor and foiled the coup.

Since the students' support for the failed coup, the land question became the biggest challenge. Student demonstrations took up yearly the issue of the depressed situation of peasants. Their slogan "Land to the tiller" became the central programme-issue of the opposition. When in 1973 Ḫaylä Śəllase attempted to hide a famine in northern Ethiopia from the urban public, unrest flared up in the capital, eventually turning into a revolution. The new G., still appointed by Ḫaylä Śəllase, in an attempt to quell the unrest, ordered a group of experts to draft a proclamation for a land reform. But by the time their draft was ready, power relations had already changed. A group of young experts, recently graduated from the university, drafted a new proclamation.

The land reform of 5 March 1975 nationalized all rural land and gave peasants the right of access to farm land. It did not redistribute much land. But it did create a radically different local G. administration. Peasant associations were formed in every village, with elected leaders, occupied in overseeing a land distribution "as far as possible equal" within the village. Freed from all tributes and contributions to the landlords, the peasants had substantially better living conditions. But the urban population felt the difference as prices for food rose sharply and food became scarce in towns and the resources for both the army and the central G. threatened also to dry out (Pausewang 1983:105–25).

The new military G. found a smart way to tame the peasant associations: a new law demanded that a chairman of a peasant association must be able to read and write. This excluded the older distinguished farmers to the advantage of youngsters who had gone to school, but had little experience in agriculture and no confidence among peasants. Their only way to assert their new authority was to lean towards the new central administration. They became, thus, the executive arm of the central G., forcing upon the peasants a series of unpopular measures: a National Grain Board forced the peasants to deliver obligatory quota of their crops at a fixed low price. New taxes were levied and contributions for different campaigns and proclaimed national purposes were imposed. Many peasants were forced into collective farms and others could not escape the feared resettlement to remote regions. The hated villagization programme forced them to move their homesteads into arbitrarily designed villages. The immensely detested forced recruitments to the army also made use of the peasant-association leaders as local mediators. Through this system and for the first time the G. established its local presence in all villages. Peasant associations became – remaining till today – the structure of state control over the peasants.

When, in 1991, the military G. was defeated, the ↗Ethiopian Peoples' Revolutionary Democratic Front (EPRDF) took over the local G. structure. Peasant associations became the basic unit of local G., the cadres of the old Workers Party of Ethiopia were replaced by cadres of the new ruling parties in each region, dependent on the ↗Tigray People's Liberation Front (TPLF) as the leading force in the coalition EPRDF. The country was re-structured according to ethnic borders. Just as in 1973 no G. could expect to win public support without solving the land question, in 1991 no one could win support and loyalty without granting ethnic groups more freedom and self determination.

The new regions proceeded to build up regional and local G. with more administrative capacity than earlier. Regional, zonal and *wäräda*-administrators had to be recruited, mostly locally as the new law demanded that they speak their region's languages. The new local cadres know that they owe their positions solely to their membership in the ruling party and act accordingly. Lines of communication come from the top and orders are executed without questioning. Communication upwards is mainly concerning reports of successful execution, leaving out negative or shameful information. Local representatives consider any illoyality as an offence, any criticism as treason. A hierarchic "culture of power" (Tronvoll – Vaughan 2003) developed in practice, in spite of a democratic decentralization in theory. Central power remains unchallenged by regular elections which do not offer any chance to organize an opposition able to challenge it.

The court system endured expansion and decentralization. Courts are established down to the level of the *wäräda*. The reform of 1991 demanded recruiting a huge number of judges and lawyers who speak local languages. Since they are recruited by the local party, it is difficult to expect them to be independent. In fact, a recent study (Tronvoll – Vaughan 2003) revealed that most local judges do not want to be independent, preferring to consider themselves part of local administration and accountable to it. Thus, there is little division of powers in practice. Local G. and its administration has become more sophisticated, but as yet not more accountable.

Granary

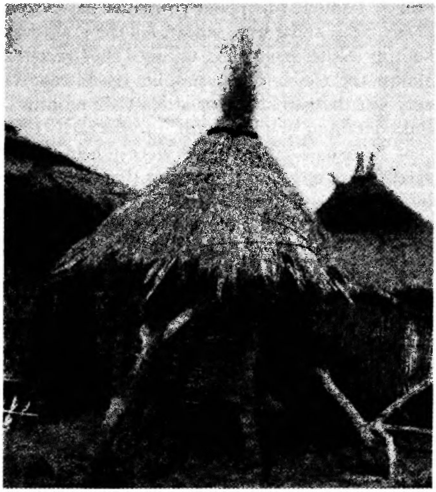
One of the main concerns in agriculturist economy is the conservation and protection of its products. The harvested field-crop has to be kept dry. Vermins such as rats, mice, bugs, locusts and army worms, as well as bigger animals have to be prevented from damaging it. The products have to be kept under the control of the household member responsible for the distribution of the food and they must be protected from theft.

Cereals are stored in various ways. In some cases the grain is simply stored in baskets, sometimes sealed with dung and clay, in the house itself. In the ↗*ḥədmo*-type houses in Təgray and Eritrea the grain is stored in tube-like containers integrated into the wall separating the different parts of the house.

There exist underground as well as overground G. (Amh. ጐተራ *gʷätära*, or *gotära*). The under-ground stores consist of large holes dug in the ground and are also known as *gʷədgʷad*.

Most types of over-ground G. roughly have in common that they consist of the part containing the grain, a platform keeping the container from the ground and a roof. Variations can be observed in the height of the platform, the character of the container and the shape of the roof. Some G. resemble traditional Ethiopian round ↗houses en miniature standing on a platform (e.g., drawings of G. in Baka, Basketo, Maale, VSAe I, Tafel 4, 1., 2., Tafel 9, 8.). In other cases the container is a huge basket, sometimes covered with dung and clay, or a large clay vessel. G. can also be simpler, consisting only of a large bamboo basket, with or without roof, a platform without roof (e.g., s. pictures of G. in Aari, VSAe I, Tafel 33, 1., 2.; VSAe III, Tafel 17, 2.) or a vessel standing under a roof (e.g., in Dorze, VSAe III, Tafel 7, no. 8).

Monarchs often controlled extensive G. These were supplied from the taxes and used to dis-



Gʷätära; photo courtesy of Peter the Great Museum of Anthropology and Ethnography, St. Petersburg (photo no. 2097–81) pense grain to the ruler's followers, as well as to the general public in time of ↗famine. The Chronicle of *aṣe* Iyasu I states that in 1706 starving peasants came to Gondär to ask the ruler to save them from hunger. The monarch "gave relief to innumerable people for two months, while others were supplied by the nobles acting on his orders". He reportedly freely offered his help and is said to have provided charity without discriminating against any part of society (GuiIohan 231f.). Grain storage was no less significant in the 19th cent. Harris (HarAeth vol. 3, 33), the British envoy to Šäwa, tells of a famine in the late 1820s during which provisions could "alone be obtained from the royal granaries". Large monasteries such as ↗Däbrä Libanos also had large G.

G. were equally important for the upkeep of the soldiers. In the mid-19th cent. *ras* ↗Ali Alula was reported to have whenever possible supplied his troops with a monthly allowance of grain from his G., though the men frequently relied on a "half-plundering license" to live on the peasantry (House of Commons 1868:115).

Aṣe ↗Tewodros, in his attempt to establish a modern, paid army, built several large grain stores for his troops (PankHist II, 59). One of these was at his palace at Mäqdäla, which, according to Markham (1869:357), was filled with grain. Blanc (1868:209) reports that there were also "half a dozen large huts, protected from the rain by a double roof. They contained barley, *ṭef*, beans, peas, and a little wheat. All the grain was kept in leather bags piled up until they reached almost the roof". These supplies could reportedly last the garrison "for at least six months". Pits containing grain, according to the early-19th-cent. British observer Pearce, were in many cases carefully covered up to prevent their discovery by marauding soldiers.

Aṣe Mənilək II in the years immediately prior to the ʿAdwa campaign (1896–97) strengthened his army and reduced the threat of its looting the countryside by establishing special G. for his troops. These stores were set up in the main area of anticipated conflict, namely Təgre and Wällo. According to Keller (1918:94), these G. later proved of great value during the subsequent fighting with the Italians.

Considerable storage in G. likewise took place on the eve of the Italian Fascist invasion of 1935–36, as evinced by a dramatic photograph of burying grain in a hole in the ground (s. Goldmann 1935:106).

Grassland

G. defines a formation of vegetation without or with only a low portion of wood. In the tropics it includes all types of savannah, semi-deserts and some parts of highland areas. Naturally evolved and evolving, G. is generally the result of climatic conditions and climatic changes. In some places specific edaphic conditions may also provoke G. Depending on the length of the rainy season and annual rainfall, the types of tropical G. can vary considerably: from short grass not fully covering the soil up to high grass (approximately 400 cm) interspersed with bush, trees and forests. In general the average annual temperature is quite high (above 20° C), with low variations from month to month (typically 5° to 10° C). In highland areas natural G. is the result of low temperatures preventing trees from growing.

In Ethiopia G. is primarily to be found below 1,500 m A.S.L. (↗ecological zones of *bäräha* and ↗*qʷälla*), in the *wərč̣* and high *wərč̣* (above 3,200 m A.S.L.), but also in parts of the dry ↗*wäyna däga* (1,500 m to 2,300 m A.S.L.) and ↗*däga* (2,300 m to 3,200 m A.S.L.).

Because of the long-established pastoral and ox-plough systems, it is probable that many of Ethiopia's G. today are man-made, especially in the *wäyna däga* and *däga*, with areas cleared of shrub, trees and forests over the last 2,000 years or longer. Depending on socio-cultural and demographic patterns, in certain regions land use may have suffered several changes, shifting between grazing and cropping areas.

Today G. is important in all agricultural systems which depend on grazing. However, two serious problems threaten the regions concerned and their households: 1) soil degradation through overgrazing and soil erosion make G. vulnerable to climatic and socio-economic instability; 2) when a growth in the population is not natched

by an analogous growth of agricultural productivity, G. tend to be considered as resource-areas for intensifying land use. This option may lead to land conflicts between the pastoralists, farmers, communities and institutions concerned.

Alfons Ritler

Graven, Jean

G. (b. 27 April 1899 Sion, Valais, d. 31 December 1988, Genève) drafted the Ethiopian criminal law codes (↗Criminal Codes, ↗Criminal Procedure Code). After carrying out humanistic studies at the Collège de Sion, G. attended the Faculty of Law, at Geneva University. There he obtained his degree and later his Ph.D., with a dissertation on the development of the law of the Valais until 1798, which earned him a prize.

From 1930, G. worked at the Federal Swiss Insurance Tribunal at Lucerne, and then between 1943 to 1969 as a Professor of Law at Geneva University, being its Rector between 1963–65. Between 1954–56 he was also in Ethiopia, where he moved in 1957 to draft the Ethiopian Penal Code, following an invitation by *aṣe* ↗Ḫaylä Śəllase I. In 1961 G. was involved in the drafting of the Criminal Procedure Code together with his son Philippe. At the UN he acted as an expert on questions related to war criminals and crimes against mankind. Member of the international Pen-Club, he was also a productive writer, earning several prices.

G.'s son was also involved in the development of the Ethiopian law system. From 1954 he was his father's assistant in Addis Abäba and later was appointed secretary of the Imperial Commission of Codification. After his father left Ethiopia in 1956, Philippe Graven was appointed lawyer of the law faculty, in which time he worked on the application of laws and the Criminal Procedure Code. He also taught criminal law and criminal procedure law, even before the foundation of the university, at the University College and at the Police College. He wrote a commentary on the first 84 articles of the Ethiopian Penal Code (s. Aberra Jembere in EAE vol. 1, 813f.). From 1967 to 1993 he taught criminal law and criminal procedure law at Geneva University.

Graves

Grave culture in antiquity

As elsewhere in North East Africa, G.-fields in the region of the ancient ↗Aksum were marked by ↗stelae (some of them dated to 5,000–2,000 B.C.; Phillipson 1998:95). The earliest known

Ethiopian G. date back to pre-Aksumite times; it has been claimed that an underground G. near the ancient temple at ↗Yəḥa dates from ca. 750–500 B.C., and perhaps belonged to a pre-Aksumite ↗Dᶜ MT ruler (Phillipson 1998:45).

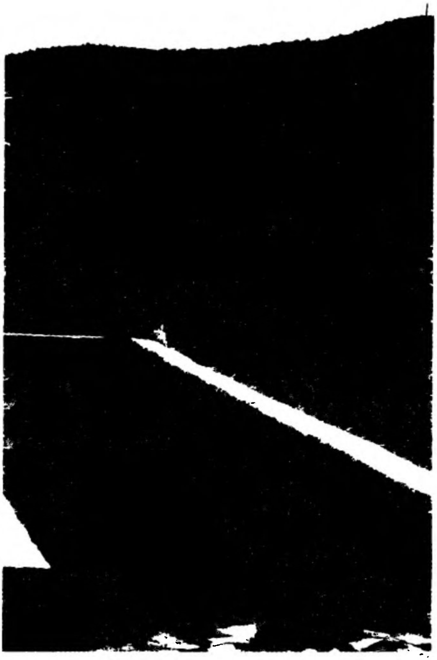
The funerary monuments of the Aksumite, composed of man-made stone platforms and stelae, are usually associated with three main types of tombs: a) pit-G.; b) shaft-tombs; c) staircase tombs.

Pit-G. consists of a) a circular pit, over 2 m deep, cut in the bedrock at the bottom of the platform, or b) two rock-cut shafts. Shaft-tombs are rock-cut tombs, and consist of a quadrangular shaft, 3 m to 8 m deep, at the bottom of which are one or more burial chambers, usually round or roughly square in plan. Staircase tombs consist of rock-cut burial chambers entered by staircases cut in the bedrock. Constructed tombs are either excavated tombs with masonry lined walls or tombs covered with soil.

Proto-Aksumite and Aksumite stone platforms were erected as a superstructure to protect the elite tombs and as a place for the votive offerings to the deceased. Pottery basins often placed on the surface of platforms demonstrate the latter function. The stelae, most distinctive monuments in the Aksum area, were most likely erected to commemorate lineages rather than individuals. They vary from simple unshaped natural monoliths found on ↗Betä Giyorgis hill, to dressed, symmetrical and sculptured stones at Aksum, and range in height from about 2–3 m to over 30 m (all of them bear no inscriptions).

One of the most remarkable Aksumite G., dating from the 3rd cent. A.D., was at ↗Näfas Mawč̣a. This G. is covered by a gigantic block of stone, measuring 17m x 7m x 1m. Also of interest is the "Tomb of the Brick Arches", a G. of the early or mid-4th cent., which lies under a structure of mud-mortared stones, and a horseshoed arch of square bricks. Also dating from the same period was the "Brick Vaulted Tomb", constructed of bricks, held together with mortar. An even larger tomb, now called the Mausoleum, was entered through a massive 15 m square granite doorway, and flanked by ten adjacent rooms. Of somewhat later construction is the "Tomb of the False Door" (with a false door facade), probably dating from the late 4th or early 5th cent., of a typical Aksumite shape with symmetrical recessed facades. Long better known were the tombs attributed by tradition to the 6th-cent. kings Kaleb (↗Ǝnda Kaleb) and ↗Gäbrä Mäsqal, which consist of two underground granite chambers, with a double superstructure, and a 40 m long facade, with two columned halls set on a platform reached by a staircase (MHAksum 125–33). It seems that tradition to cut this type of mausoleum-like G. continued until the end of the Aksumite epoch and perhaps later, as it is witnessed by structures in ↗Dəgum, Bärak̲it and ↗Ḥawzen.

Since the beginning of archaeological research of the region by the ↗Deutsche Aksum-Expedition, substantial burial deposits (pottery, iron, bronze, silver and glass artifacts, coins etc.) were unearthed almost intact: e.g., in the Tomb of the Brick Arches, burials at the so-called Gudit Stelae Field (near ↗Dungur), in some shaft-tombs and elsewhere (however, most of the G. were opened and their contents robbed many centuries ago). It has been postulated that the dead of high rank would be buried ornately dressed, with their jewellery, and laid in individual stone coffins; persons of lower status would be buried more



Aksumite grave near Aksum; in the background, a stele as a tomb marker; photo 1972/74, courtesy of the Frobenius Institut, Frankfurt am Main, ODT.02.05.01 0044 modestly, without a coffin, and with only few artefacts, perhaps only pottery, glassware and few iron tools (MHAksum 255ff.). This practice demonstrate that the Aksumites believed in the next world and were "deeply concerned with the well-being of their kings and other citizens after death" (ibid. 125).

Grave culture in Christian regions

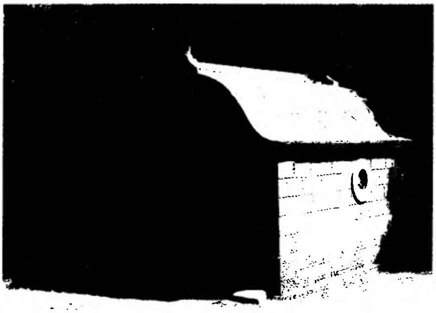
The coming of ↗Christianity brought about new features in burial practice and G.-culture, which became particularly prominent with the gradual decline of the Aksumite ↗architecture (and, later, with the movement of the centre of the Ethiopian state to the south). No more stelae were erected; burial places moved towards churches. Characteristics of the newly emerged G.-culture were influenced by the Christian doctrine with its concerns over the soul, its destiny after the death, the Resurrection and the Last Judgement (↗*Dägəm maṣᵓatu läkrəstos*; ↗Eschatology). The funeral ceremony retained some pre-Christian features, but it was regulated, first of all, according to the *Mäṣḥafä* ↗*gənzät* (↗*Fəthat*; ↗Funerals); the rituals following thereafter were aimed on the care of the soul of the dead (↗*Täzkar*). The main (but strict) requests was that the corpses of the dead should not remain unburied, and that the burial should not take place "without the Church" (Dillmann 1884:66).

Ethiopian Christian rulers of post-Aksumite times often had their G. in prominent churches, many of which they had themselves erected. *Aṣe* Bäᵓədä Maryam was buried in the church of ↗Däbrä Nägʷädʷad (Amhara), and Naᶜod in that of ↗Mäkanä Śəllase (BeckHuntAlvar vol. 1, 257). Remains of some other monarchs rest on islands in Lake Ṭana. The emperors Dawit II, Yəkunno Amlak, Zärᵓa Yaᶜəqob and Zädəngəl, as well as the subsequent Gondärine rulers Fasilädäs and Bäkaffa, were laid to rest in ↗Daga Ǝsṭifanos (ChTana 142f.). The body of *ətege* Məntəwwab (↗Bərhan Mogäsa), her son *aṣe* Iyasu II and grandson Iyoᵓas were preserved at the church of ↗Däbrä Ṣäḥay Qʷəsqʷam, near Gondär. *Nəguś* ↗Täklä Haymanot of Goǧǧam, who died in 1901, was buried at the church of that name at ↗Däbrä Marqos (ChTana 36).

In the monasteries the problem of burial was solved in different ways. In some places G. were cut directly in the rocks around the establishment (↗Däbrä Damo); sometimes natural caves were used for this purpose (↗Gʷəḥ). In some places there are funeral chapels, or the large caves with many graves on different levels (↗Däbrä Mäᶜar). Often more than one body was put in a grave. Some of them are overcrowded and treated more as the *ostoaria* then the graves. As *ostoaria* were also used clay vessel, sometimes many meters large and high (Saida Gäbrä Gälila Maryam in Wag).

According to an old Christiam custom, the G. are deprived of inscriptions or other signs identifying the defuntes. In case of important persons, including emperors and high ecclesiastics, the identity of remains is usually preserved by the local tradition only (cp. the burial of *abba* Sälama Käśate Bərhan at ↗Ǝnda Abba Sälama). Devout Christians, both nobles and commoners, were completely "depersonified" in their corporal death (this being "balanced" by the hope for eternal life of the soul). It was not uncommon for them to order, as the last will, their bones be carried for re-burial or deposition at some holy site, usually a church or a monastery (the most pious cherishing the dream of being buried in ↗Jerulsalem). These sites where the ↗relics of saints were kept or which were famous as particularly holy places show a concentration of graves of different kinds, for instance ↗Lalibäla or ↗Yəmrəḥannä Krəstos (at some of them, like ↗Däbrä Libanos of Šäwa, large depots of bones have been recorded).

The tradition of burial in mausolea probably dates back at least to the ↗Gondärine kingdom and its architectoral tradition. The bones of the "king-martyr", *aṣe* ↗Iyasu I, and of the members of his family were deposited on Məṣraḥa island (in Lake ↗Ṭana) in a "big rock-and-mortar building with an arched roof and stone steps going down twelve feet to the vaults" (ChTana 190f.). This notable development was maintained in the second half of the 18th cent. in ↗Šäwa, as a mausoleum was erected at Ankobär for *märədazmač* ↗Amməḥa Iyäsus. *Märədazmač* ↗Wäsän Sägäd reportedly erected his own mausoleum decorated with paintings showing battles and the hunting of wild animals (Rochet



Mausoleum of Ṣägga Zäʾab, Ǝtissa, Däbrä Ṣəlaləš; photo 2004, courtesy of Denis Nosnitsin

d'Héricourt 1841:215ff.). The 19th and even more so the 20th cent. witnessed the construction of larger and finer stone mausolea. *Nəguś* ↗Śahlä Śəllase is reputed to have erected stone mausolea for the relics of Ṣägga Zäʾab and Ǝgziʾ Ḫaräya, parents of 13th-14th-cent. *abba* Täklä Haymanot, at ↗Ǝtissa Däbrä Ṣəlaləš, in Bulga. Däbrä Libanos of Šäwa became a site of imposing mausolea for *ras* ↗Darge Śahlä Śəllase, who died in 1900, and *ras* ↗Abatä Bwayaläw in 1917. Stone mausolea were also built in other parts of the country, notably at ↗ʿAdwa (Bent 1896:127). In Addis Abäba, one of the earliest stone mausolea was that of *käntiba* Zäʾamanuʾel, who died in 1918. Much more imposing, however, was that for *aṣe* Mənilək II, Empresses Ṭaytu, Zäwditu, and of Princess Ṣäḥay Ḫaylä Śəllase in the Bäʾata Church, constructed by the engineers who were also responsible for the construction of the Djibouti railway (Karl Haertel, a German, being one of them).

The G. of Christians of ordinary rank, in the late 19th-early 20th cent., were situated in the vicinity of churches, without headstones (Rey 1923:79). Today, the G. of Christian Amhara may be marked with headstones if the family can afford it; they may be covered with concrete, or they are just protected with a sheet of corrugated iron (Aspen 2001:89-102). The tombstones for individuals, or occasionally families, may be inscribed in Amharic with the name of the deceased, and the date of death (or, in some cases, with a kind of epitaphy; ↗*Ǝngʷərgʷəro*). Rural G. may be marked with a circumference of rocks around it, allowing it to gradually disappear by the growth of the surrounding bush and by the impact of rain (Messing 1985:232).

Some use was however also made of *sänbäte bet*, or communion houses, i.e. "burial-houses" erected over the actual G., with the floor "cunningly smoothed over with plaster so that none would know that a body lay buried beneath" (Walker 1933:64f.). Some such houses, for persons of status, might be of stone, but without windows. The largest of such houses might be eight cubits square (ibid. 54f.).

Traditionally, cemeteries are placed near or in the parish churchyard. The assigned area for G. reflects the socio-religious hierarchy. Priests, monks and other servants of the church as well as pious Christians are buried inside the outer fence; people of higher standing are buried closer to the church, inside the inner fence or inside the church itself. Persons who have died by drowning, by falling from a cliff, by being eaten by wild beasts, or by committing suicide are not buried in the churchyard and are not entitled to church rites (Fassika Bellete 1957:21). G. for Muslims are normally set apart from those of Christians.

The G. is dug by members of the burial association (↗*Ǝddər* and የአፈር ፡ ቅሬ, *yäʾafär qəre*) in an east-west direction. It has a rectangular shape which narrows from east to west. It is rather shallow, about three feet deep, and is just long enough to accommodate the corpse (Fassika Bellete 1957: 22f.). The head is pointed east (Shack 1974:43). If relatively flat stones are available, they may be used on the floor of the G.; they may also be used on top of the corpse if there is n o coffin. The poor cannot afford coffins and are buried wrapped in a cloth. In earlier days coffins were made of either hollowed acacia trunks or of acacia bark (Aspen 2001:90f.). The G. may have some ritual significance at the later memorial services (Debebew Zellelie 1957:29f.); after the Mass, the *täzkar*-commemoration continues in private homes and, for the priests, in "dedicated houses" (ደጀ ፡ ሰላም, *däğä sälam*) in the churchyard.

The principal graveyard for Ethiopian as well as European Catholics, Armenians, Greeks, and other foreigners was established at Gullälle, on the borders of Addis Abäba, around 1906, the year when the Russian envoy General Lishin was buried there. Tombstones with photographs of the deceased became more common after Ethiopia's Liberation in 1941, when they also tended to be larger and more ornate. Church G. buildings, in which coffins were packed side by side on shelves, came into use towards the end of the imperial period.

Richard Pankhurst - Harald Aspen

Grave culture in the Muslim regions

According to Islamic traditional law two kinds of G. are acceptable: the *laḥd*, the lateral G. which is dug down the side of the body, oriented towards ↗Mecca, and the *šaqq*, in which the pit is located in the middle of the tomb. As the Prophet ↗Muḥammad was buried in a *laḥd*, most Muslims prefer the lateral G., using the *šaqq* only when obliged by the friability of the soil or by the size of the corpse. No universal consent was reached by the four major Islamic legal schools on the depth of the G. The Šāfiᶜīs, who represent the majority of Ethiopian ↗Islam, favour a deep G. (up to 2,50 m) while the Mālikīs, who are widely present in Eritrea, prefer more superficial G. (60 cm). A great disagreement exists on the materials to be used for the building of a G., even though all the Islamic jurists unanimously consider green bricks as lawful. As for the exterior shape of the G., a great part of the Islamic legal scholars teach that a G. should be a span high, convex (a flat G. being a characteristic of Šiᶜī Muslims) and made easily recognizable by stones or pieces of wood. Burial pits are normally dug for only one person, but collective G. are not uncommon. Since many believers are persuaded that the blessing power of a saint (↗Saints) can take them to paradise, they are eager to be buried near G. of ↗holy men. Many Islamic cemeteries thus grew near the shrine of a *walī* (*qubba*, *maqām*), which may sometimes assume the structure of an imposing funeral building.

Gravestones with Islamic funerary ↗inscriptions, belonging to a lapse of time between the 11th and the 16th cent., were found in various regions of Ethiopia. A small amount of twin stelae has also been discovered: in fact, an Islamic G. may have two tombstones, one at the head and another at the feet of the buried person. All the gravestones show a certain degree of variety in calligraphic and ornamental patterns, which reflect the different level of technical capability and of artistic sensibility of the craftsmen. In particular, some of the gravestones of the necropolis of ↗Dahlak are remarkable for their refined beauty (Schneider 1983:51-58), while others are very simple and coarse. The language used to indicate the name of the buried person and the date of his decease is exclusively ↗Arabic, everywhere in Ethiopia. Other elements very often present in the epitaphs are: 1) a number of Arabic eulogical expressions for the departed; 2) the standardized formulas of blessings upon the prophet Muḥammad; 3) Qur'ānic quotations, in particular of verses dealing with death and life in the hereafter (e. g. *sūra* 3:182 or 55:26-7).

Nowadays, at least in the major towns, the name and date of death of the deceased are inscribed in Arabic/Amharic on tombstones.

Alessandro Gori

Grave culture in southern Ethiopia

Although G. culture differs largely among the several groups of southern Ethiopia, some common features can be distinguished. G. are mostly individual, without access and below the earth. Exceptions are the "death-huts" in which kings or ritual leaders are kept to be buried later on (e.g., ↗Basketo, ↗Komo, ↗Konso and ↗Maale), or in which the dead are placed for their final rest (e.g., ↗Bäšada, ↗Hamär, ↗Šeko). Šeko-leaders are wrapped in *ənsät* leaves and left on poles in a designed area in the bush.

The marker of the tombs are usually mounds, either of earth or of stones. The Hamär, ↗Banna and Bäšada additionally place a small stele (*baba*) on this mound when the tomb is of a married man or of woman with children. The Ṣamay mark the place of the dead's head by erecting a stone and in some areas of Konso each tomb is marked with a wooden statue depicting the defunct.

Among several groups – ↗Koorete (Amarro), ↗Arsi, Basketo, Berb-Burun, Komo, ↗Dime, Ǧumǧum, ↗Käfa, Konso, Maale, ↗Mao, ↗Mabaan, Šeko, Uduk etc. – the G. has been reported of consisting of a pit with a lateral niche in which the dead is placed. Among the ↗Boorana, it is reserved for rich and influential persons. In ↗Sidaamo, this type of tomb is known to have existed since about the 12th cent. The northern ↗Guǧǧi as well as the ↗Aari construct a rim in the tomb, on which wooden sticks are placed before closing the G. "to prevent the earth to fall on the dead man's face" (Schulz-Weidner in Jensen 1959:153). Other groups, like the Hamär, Banna, Bäšada, Suri and ↗Meʾen, lay the dead in a simple round hole.

Sidaama grave (of an uncircumcised man); photo 1954/55 by Elisabeth Pauli, courtesy of the Frobenius-Institut, Frankfurt am Main (027–Pa005–28)

According to the reports, no enduring funeral deposit seems to be placed into the tombs, except that Koorete high officials are supposed to be buried with their ↗*kallačča*. Basketo and Dime cover the ground of the G. with leaves of *ənsät* before posing the dead. Boorana, Dime and Konso spill some blood of sacrificed animals in the G., whilst the Southern ↗Gonga spill honey and milk.

In many southern societies, the dead body is buried in a crouched position, but some, like the ↗Kambaata, Konso, ↗Nayi, have adopted the Christian way of burial. Among the Maale and the Boorana, a man is laid on his right side (in Boorana facing east), a woman on her left side (in Boorana facing west). The Aari bury a body so that the feet point in the direction of the supposed origin of his clan. In Ṣamay the dead should face the direction of his clan-origin, which, however, should never be west. Neither of the groups bury adults completely naked, rather covering the bodies with a cloth or tie them into a skin.

In societies with a ↗*gadaa* system, the location of burial depends largely on the grade the defunct achieved in this system before his death. In other societies, the location may differ according to the rituals that had been accomplished at the time of the death, such as birth-ritual, ↗circumcision and initiation. In ↗Burǧi, ↗Gidiččo, some regions of Konso, Ṣamay and Šeko, we find cemeteries, often organized by clan affiliation. Among Banna, Bäšada, Meʾen, Hamär and some Konso the G. are dispersed in the bush. The Meʾen, Suri and Šeko bury common people near to the dead persons' hut, whilst the deceased of the Dizi are buried underneath their hut.

Remarkable are the cenotaphs – reminiscences of deceased enemy-killers or hunters of ferocious animals (↗Meritorious complex). Some ↗Arsi G. of such men are surmounted by high tumuli and surrounded with decorated stele. Anthropomorphic stelae with spears and other signs mark many ancient G. in the region which is today called ↗Gurage; in Sidaama, ancient stelae have been found in great number. Still today, the Gawwada and Konso erect stelae to remember a killer of men or of dangerous animals. The Koorete, Gideo, Wälaytta, Burǧi, Guǧǧi, Leeqaa

(↗Leeqaa Neqemte), Boorana hang the trophies of a defunct in trees near to the G. or a pathway, and in Konso, killer-heroes are remembered by erected groups of statues carved in wood which stand along a pathway or a communal place. The Sidaama and Oromo of Wälaytta also used to place anthropomorphic wooden statues or reproductions of hunted animals from wood or *ənsät* leafs on the G. or near the pathways. In the Gamu highlands, the G. of such heroes are surrounded with bamboo fences, those of the Koorete heroes and high officials with pointed wooden boards. The Burği distinguish the G. of hunters of buffaloes, which are decorated with forked staffs, from those of hero-killers, decorated with ostrich-eggs. As many passers-by as possible should notice the cenotaphs and, thus, remember the fame of the defunct. Several groups plant trees at G. site (e.g., Meʾen, Dita, Dorze: trees; Arsi: euphorbia; Bayso: sansivieria; Oromo from Wälaytta: grass). On the cemetry of Tuto Fela, microlithic obsidian tools have been found in the graves, as well as a stone axe and pottery that were probably positioned on top (Jousseaume 1995:89).

Nicole Poissonnier

Graziani, Rodolfo

G. (b. 11 August 1882, Filettino, d. 11 January 1955, Rome) was an Italian officer who played a leading role in the Italian expeditions to Libya, ↗Italian Somaliland and Ethiopia. He also took part in ↗World War II, when Mussolini planned to invade Egypt to renew the "glory" of the ancient Roman Empire.

He entered the army in 1904 and had a rapid career. In 1908 he was dispatched to Eritrea as commander of the 1st *Battaglione Indigeni* at ʿAddi Wəgri (↗Mändäfära). He was back to Italy in 1912; in the next year, when he married Ines Chionetti, he already was a captain. During World Wat I, at the age of 36 he became the youngest colonel of the Italian army of the time.

As an officer, G. was notorious for his brutality and toughness. In 1930 he was appointed by Mussolini as deputy to General ↗Badoglio in Barka, Libya. There he succeeded in nearly eradicating the colony. Many inhabitants were killed or sent to prisons. G. created special courts, the *tribunali volanti*, which gained him the local appellation of "butcher of the Arabs". There Libyan opponents were condemned, with great dispatch, and sentences were executed publicly. Wells were blocked with cement and many of his opponents were thrown from planes and crashed to their deaths.

In February 1935 G. was appointed governor-general of Italian Somaliland and commander of the expeditionary force, in preparation for the invasion of Ethiopia, ordered by Mussolini in October 1935. Aiming less at the defeat than the total annihilation of the enemy, during the ↗Italian War 1935–36 G. deployed the most deadly weapons, including gas, banned by international law. He was likewise proud to have under his command the Libya Division, known for not taking any prisoners.

G. reached Addis Abäba in May 1936, and was then appointed Marshal of the Italian army and Viceroy of Ethiopia. In the latter capacity, at the end of the war, he also ordered the elimination of the remains of the imperial army; and implemented a wide range of suppressive measures, especially against the local nobility. As a reaction he became the target of an assassination attempt (followed by the ↗Graziani massacre). On 6 October 1937 he was removed from Ethiopia and granted the title of Marchese di Neghellì.

Upon the launch of World War II, G. was re-appointed general commander of the Italian army in Libya. After the war G. was sentenced by an Italian jury to 19 years imprisonment for collaborationism, but was released shortly after in 1950. During his last years he participated actively in the re-establishment of Fascism with the neo-Fascist party *Movimento Sociale Italiano*. G. wrote a number of books glorifying his victories and the fascist ideology.

Shawki El Gamal

Graziani massacre

On 19 February 1937, whilst attending a ceremony celebrated at the ↗Gännätä Ləʿul palace, the Viceroy Rodolfo ↗Graziani suffered a failed assassination attempt. The perpetrators were two Eritreans, ↗Abrəha Däboč̣ and ↗Mogäs Asgädom, with the complicity of the taxi-driver Səmʿon Adäfrəs, who had provided them with hand-explosives and a car. The attempt, in which Graziani was seriously wounded, was followed by a devastating reprisal. For three days, Italian and Eritrean soldiers and civilians ravaged the indigenous areas of Addis Abäba, killing more than 4,000 people. The following days the more progressive members of the Ethiopian intelligentsia – including several foreign-educated ones – were killed, as well as not less than 2,500 story- and fortune-tellers who had pleaded guilty of having announced from village to village the coming end of the Italian occupation.

Convinced that the perpetrators had enjoyed the help of the monks from ↗Däbrä Libanos of Šäwa, Graziani ordered General Pietro Maletti to advance towards the holy place. According to Graziani's own account to Mussolini, the number of monks, priests and deacons shot dead would have been 449. Yet, according to field research done by Ian L. Campbell and Däggəfe Gäbrä Ṣadiq in the late 1990s, the actual number probably was between 1,423 and 2,033.

Whilst these summary executions were perpetrated, Graziani deported to Italy hundreds of Ethiopian noblemen and imprisoned thousands of presumed opponents in the concentration camps of Noqra and Dänane, where 3,175 Ethiopians were killed. The excesses of Graziani brought Mussolini, so far a supporter of his tactics, to replace him at the end of 1937 with Amedeo di ↗Savoia, Duke of Aosta, whilst the country was in full uprising.

Grébaut, Sylvain

G. (b. 22 December 1881, Gournay-en-Bray, Normandy, d. 26 November 1955, Caen, Normandy) was a distinguished French Ethiopisant. While attending the seminary of Rouen, he met Maronite students, who may have first inspired his keen interest in Oriental studies. During the years 1904 and 1905 he studied at the Biblical School of Jerusalem, together with the future Cardinal Eugène ↗Tisserant. On returning to France, in 1907 G. was ordained priest and in 1913 he was put in charge of the parish of Neufmarché.

In 1926, Pope Pius XI sent G. to Ethiopia with the task of acquiring manuscripts for the ↗Biblioteca Apostolica Vaticana, where, at that time, Tisserant was in charge of the Oriental manuscripts. The catalogue of both the 165 manuscripts G. brought to Rome, mostly from Šäwa, and those already in the old funds of the Bibliotheca appeared in 1935–36 (GreTisVat).

From 1926 to 1952 G. taught Gəʿəz in the Institut Catholique in Paris. From 1941 he was also giving complementary courses in various subjects at the Ecole Pratique des Hautes Etudes, under the directorship of Marcel ↗Cohen. From 1929 on he was a prelate of His Holiness.

In the words of Tubiana (1965), G. was a "discreet, never-tiring and zealous" person who "knew Gəʿəz as a real *däbtära*". He devoted his scholarly life to philological works and translations that appeared in the *Revue de l'Orient chrétien* or ↗*Patrologia Orientalis*. His catalogues and his supplement to Dillmann's *Lexicon* (Paris, Imprimerie nationale, 1952) are valuable contributions to ↗Ethiopian studies. In addition to that, between the years 1922 and 1938, time when there was no regular periodical on Ethiopian studies, he created and nourished a scholarly bulletin – influential in spite of its desultory appearance and change of name: ↗*Æthiops* (1922–23), ↗*Æthiopica* (1933–36), *Æthiops* (1936, 1938).

Alain Rouaud

Greece, relations with

Early relations with Greece

Since the beginnings of Ethiopian civilization, there existed connections with the Greek world, especially through ↗Egypt: hence the ancient Ethiopic description for 'Greece' and 'Greeks' *Ṣər(ə)ʿ/-r(ə)ʾ*, which seems to have first indicated Hellenized Egypt (Fiaccadori 2004:141f., 157; cp. ↗*Färänğ*). Links between ↗Aksum and the ↗Byzantine empire existed in several areas of mutual interest. However, after direct ties were severed by the Muslim expansion in the eastern Mediterranean and Red Sea, only sporadic relations existed between the Greeks and Ethiopia. With the fall of Constantinople to the Ottomans in 1453, a number of Greeks is supposed to have sought refuge in Ethiopia (Petrides 1945:11). In the 16th cent., the Portuguese found there several foreigners, and ↗Alvarez reports that the only non-Muslim merchants were "Roumes from Greece" (BeckHuntAlvar 187, 275f.). The chronicle of ↗Gälawdewos mentions foreigners from Rome, viz. Constantinople, and G. residing in Ethiopia (ConzGal 158). Late in the 17th cent. Demetrius, from the island of Skopelos, rose to some political prominence at ↗Iyasu I's court. According to the French Consul in Cairo De Maillet, he was "l'un des premiers ministres" of the Emperor, and married one of the latter's daughters (BecRASO XIV, 38-49; Dapontes 1872:89). At the beginning of the 18th cent., a Greek fishing-boat captain was sent to Bombay on an unspecified royal mission; in the 1720s *nəguś* ↗Bäkaffa employed two Greeks known as Demetrius and Giyorgis to construct a vessel on Lake Ṭana (BecRASO XIV, 341f., GuiIohan 337f.).

In the late Middle Ages, contacts also continued on the Greek island of ↗Cyprus, which was to house the Ethiopians who had left Palestine after the fall of ↗Jerusalem to the Muslims in 1189. They lived with the Copts in the monastery of St. Anthony of Famagostā. An Ethiopian community was then centering, at least from the 16th cent., in the church of the Holy Saviour at Nicosia, the capital city of the island. This community was fairly large and at one point consisted of 50 individuals. There is also evidence of Ethiopian farmers in the Nicosia area. There the Ethiopians collected local traditions incorporating them into their collection of the Miracles of Mary (↗*Täʾammərä Maryam*). In an Ethiopian manuscript of the Vatican Library two such miracles taking place in Cyprus are recounted (CerPal vol. 2, 1–11, 33–37; Cerulli 1970:178–86; Fiaccadori 1989:197f., n. 1).

Theodore Natsoulas

Modern relations with Greece and Greek presence in Ethiopia

From the 16th cent. to the mid-18th cent., Greek presence in Ethiopia consisted of isolated individuals who made their way to the central highlands. There is some evidence of Greek merchants, a royal adviser and physician and ship builders on Lake ↗Ṭana. In the mid-18th cent. a small number of Greek craftsmen and merchants who fled from Smyrna and the Aegean islands arrived in Ethiopia. They were involved in the economic, social and political life of the country. Greek presence in Ethiopia is well attested since at least the 18th cent., when the traveller James ↗Bruce testified that *aṣe* ↗Iyasu II was employing Greek craftsmen in his capital ↗Gondär. Intimately tied to the crown and fulfilling fundamental roles in the courts of Iyasu II and his successor, ↗Iyoʾas I, they remained in service until 1771 – when the Ethiopian central authority disintegrated.

The two most prominent Greeks of this early period were George Brakos from Chios and *bäǧərond* Janni from Rhodes. The former was a treasurer and confidant of Iyasu II. Often mentioned by Bruce, Janni had been Iyasu and Iyoʾas's representative in Təgray, and in 1770 was as head of customs there, serving *ras* ↗Mikaʾel Səḥul. The leader of the Greek community of the time of Bruce's stay was Janni's brother, Petros, who was Iyoʾas's chamberlain.

Court positions of the Greeks varied from minor to important posts, such as that of royal advisers, treasurers and chamberlains, in both imperial and local courts. Less important positions included those of cook, guide, personal servant, and the like. In addition to official appointments, a few Greeks held high status by rendering some service to the Emperor. In return, they received land and titles. Greek craftsmen, including ↗goldsmiths and painters, were commissioned by Iyasu II to decorate his palace; they also renovated some of the principal buildings of the capital. The Smyrnites introduced the art of filigree in both silver and gold, applied to this date in Ethiopia with notable success. 18th-cent. Greek settlers served in the army as officers and were involved in training and command. They also repaired saddles, bridles, swords and other such military equipment for the ↗cavalry (BruNile vol. 4, 122f., 133f., 211; SaltTrav 421; Dapontes 1872:339).

The "tradition" went on in the 19th cent. However, in sharp contrast to the Smyrnites and the islanders, usually skilled and educated individuals, most of the Greeks arriving during the early 19th cent. proved to be an uneducated roughhewn lot that showed scant interest for learning or the arts. Even freed from the Ottoman rule, after 1830, G. remained a very poor country and, being Orthodox Christians, the Greek had an ambiguous status in Europe. Ethiopia was, therefore, a realm where they could express their identity and find self-realization. Greeks took employment with regional overlords during the first half of the century and with Ethiopian emperors later on. The 19th and the very first years of the 20th cent. were the golden age for those who were sometimes referred to as *yäfäränǧ barya*, the "white slaves", since they were working in professions that Christian Ethiopians despised.

Greek migrants were appreciated by Ethiopian emperors and landlords for their manual skills and trading experience. Several were employed as gunsmiths and armourers who manufactured ↗firearms and trained Ethiopians in their use. Others were involved in construction and mechanical arts and built bridges, homes, palaces and even a watermill, for instance, for ↗Śahlä Śəllase (1813–47), and for *aṣe* ↗Tewodros II (1855–68). The Greek trade network was also well organized, and many craftsmen increased their income through trade. In the mid-19th cent., Greek merchants were present and active in ↗Kassala, a commercial Sudanese town close to the western boundary of Ethiopia and a crossroad for caravan-roads connecting Egypt and Ethiopia.

During the reigns of Tewodros II and ↗Yoḥannəs IV, a number of Greeks became Ethiopian advocates and pursued Ethiopian interests. Tewodros used to deal with a certain Marcopoulos. Ioannis ↗Koztikas was the most prominent of several Middle East Greek merchants who unsuccessfully attempted to deter the British invasion of Ethiopia in 1868. Regarded almost as an Ethiopian patriot, Kotzikas contributed to the formation of the image of Tewodros as a hero by presenting in Athenian newspapers the Ethiopian side of the Ethio–British conflict and defending the opinion that the retrieval of hostages could have been done without bloodshed.

Other members of the Greek establishment are emblematic figures in the 19th-cent. Ethio–Hellenic relations. *Bälambaras* ↗Giyorgis Fotis, who arrived around 1870 with nothing and who died in 1910 in ↗Addis Abäba as a wealthy man with an Ethiopian family, is a symbol of the success that simple migrants could achieve.

Another eminent figure was Demosthenes Mitsakis (Mitzakis), vice-consul of G. in Suez and the first diplomat sent by the Greek government to Ethiopia. The British sent twice negotiators on behalf of Egypt to conclude a treaty with Ethiopia, and on both occasions Mitzakis was negotiating on behalf of Ethiopia (Kotsikas 1970; Mitsakis 1880). In 1879, during the negotiations with ↗Gordon for the Ethio–Egyptian peace treaty, he acted as a mediator between *aṣe* Yoḥannəs and the English general. In 1884, during the ᶜAdwa treaty, he played the same role for the future *aṣe* ↗Mənilək II. For his assistance to the ↗Hewett mission, he received a medal from Great Britain. Mitzakis was also concerned with the question of Church unity: on the Greek side, the purpose was to enhance the prestige of the Greek Orthodox Church; on the Ethiopian side, the project was used as a threat to obtain concessions from the Coptic Church.

Nicholas Parisis, a physician, who was in Ethiopia in 1885–86, is said to have been influential at Yoḥannəs IV's court. Like Mitzakis, he was aware of the potential value of Ethiopia for Greeks and was genuinely promoting the country's territorial integrity and independence. Parisis, who was professor of pathology and therapeutics at the National University of Athens, went to Ethiopia in December 1884 to serve as the Emperor's physician, but became embroiled in Ethiopia's disputes with ↗Italy. He detected immediately Italy's colonial ambitions in north-east Africa, and counselled Yoḥannəs about them. Sent by his government, Parisis would have had enough political support to gather information about Italian strategies and, according to Carlo Conti Rossini, seems to have helped preserve Ethiopia's integrity. A colonized and dismembered Ethiopia would have been dangerous for G.'s policy against ↗Turkey, as much as it could have endangered G.'s Red Sea commerce. During his stay, Parisis also scored major successes as a physician. He introduced smallpox vaccination with serum brought from Europe. Parisis also combated ↗malaria, using for the first time in Ethiopia sulphate of quinine as a prophylactic. Besides, he treated tapeworm, syphilitic ulcers, blennorrhea, and dermatic ulcers (Parisis 1888a; 1888b; ↗Diseases).

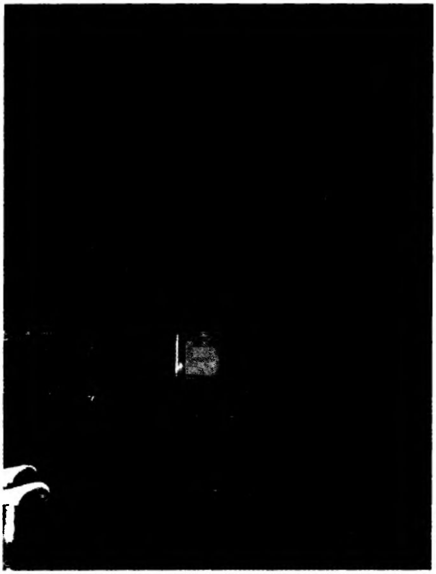
The history of the Greeks in Ethiopia took a different turn late in the 19th cent. From 1896 onward, their presence in the country became more stable and community-oriented. Greeks began to come in larger numbers, gradually bringing their families with them, or establishing families in Ethiopia.

Greek merchants had begun entering Ethiopia through ↗Harär in the early 1880s. Many originally were agents of foreign-based houses, but once in Ethiopia, although remaining representatives of the larger concerns, they established their own business. One of the largest international Greek firms was the Liverato Brothers, whose representatives, such as I. Gerolimatos and the Kalogeropoulos brothers, became successful merchants on their own. The Greeks of Harär were involved in both domestic and international trade. The small shopkeepers sold almost anything, though mostly dealing with metal wares, cloth, arms and ammunition. In international commerce, ↗coffee was their primary export. They purchased it from local planters and/or had their own plantations and exported it to Greek houses in ↗Yemen and Aden that in turn shipped it throughout the world.

For Mənilək II's reign, two periods can be distinguished. From 1889 to 1902, Greek migrants were primarily young single men or married men who left their wives and families behind. Their objective was to gain wealth as quickly as possible and return home. In the urban centres, where the majority of the Greeks settled, they attempted to recreate a "little Greece", with their own communal organization, church and school. Although there are no precise figures, the number of Greeks in these years expanded rapidly. Prior to and immediately after 1896 most Greeks resided in the eastern town of Harär, and in the Italian occupied towns of ↗Asmära, ↗Kärän, and ↗Massawa (Mérab 1922:108f.). In Eritrea approximately 180 Greeks were resident at this time. In Harär, the figure was probably less than 100, most of them single men who were either merchants with ties to ↗Djibouti in French Somaliland or workers engaged in the Franco-Ethiopian Railroad (↗Railways). During the first decade of the 20th cent., most gravitated to the capital.

During these years, Greeks prospered considerably. Their participation in commerce, industry and construction contributed to Ethiopia's economic growth. Besides, Greeks continued playing a political and public role. Some Greeks ran guns to Mənilək in the 1890s, one painted the portraits of Mənilək and his wife, and another was the court dentist in the 1920s. Other Greeks had responsible positions in the Telephone, Telegraphs and Telecommunications, Agriculture and Commerce, and Foreign Ministry Departments.

Among the prominent Greeks of these years



Interior of the Greek Church of Addis Abäba, Piyassa area, July 2004, photo courtesy of Wolbert Smidt

were Christos Papadopoulos, counsellor of Mənilək in 1890, followed by Athanase Sourvis, his private secretary and translator. Andreas E. Kavvadias was the founder and editor of Ethiopia's first Amharic-language newspaper, ↗*A'əmməro* ('Knowledge'), in 1902. In this period, George Zervudakis, a Greek banker in Egypt, organized the arrival of Greek workers and craftsmen in Ethiopia.

The railroad was a vehicle for large-scale Greek penetration into central Ethiopia. Of the ca. 500 Europeans, the Greeks constituted the largest group and were prominent in the construction of the railroad, employed in various positions. The most important were the approximately 15 subcontractors who vied with each other for parts of the line. Skilled workers were brought from G. to complete portions of the line. Greeks were also employed in other capacities, erecting bridges and trestles and setting up the first telephone and telegraph lines. In daily operations they filled such positions as drivers, station guards, stokers, station masters, engineers, chief of districts, and mechanics. Greek repairmen were found not only in the central depots but were scattered along the entire line. Finally, they also established cafes and inns along the most important depots.

After 1902, with the railroad connection to ↗Dərre Dawa, the structure of the Greek community began to change. More and more poor and uneducated migrants arrived, largely through Djibouti, where they had worked on the French railway. A first big influx occurred in 1905, with large numbers of Greeks making their way to the Ethiopian capital. At the very beginning of the 20th cent., the Greeks in Ethiopia numbered more than 300 persons, possibly the largest foreign community after the Armenians. The estimates for Greeks in Addis Abäba rose from 65 in 1906 to 344 in 1910. Another calculation in 1910 combined Armenians with Greeks and estimated that the two comprised 80% of the foreign population, totalling 1,000. Until 1916, Greeks lived in a liminal situation, in which law and order were not always present. These early immigrants, essentially individualistic and rugged, without communal, familial, or religious ties, and living in a community where civil authority was minimal, were often in conflict with each other and with Ethiopians. Those "poor whites" had problems with integrating into society and created serious competition with Gurage people, who also performed most of the hard labour in Addis Abäba at this time. Mənilək tried to regulate their number. Consequently, in 1907, some criteria for admission were set up on the initiative of the Greek community in Addis Abäba, who wanted to avoid any difficulties with Mənilək and Ethiopian authorities. Migrants must be acquainted with a trade or possess at least 100 Maria Theresia thalers over and above the sum required for their journey. No diplomatic representative was sent by Athens at this time. In July 1907, at the request of the Greek government, Britain agreed to assume protection of Greek interests in Ethiopia (Natsoulas 1977: 134–42). A number of Greeks therefore worked for the British Legation in the capacity of vice-consul, consular agent and Oriental secretary. The British consulate offered its services and protection to the Greek community until 1911.

The Commercial Bank of G. was founded in 1907 following the creation of the first Ethiopian bank in 1906 (↗Banks, banking system). In 1909, Souvis played an important role in the foundation of the Banque Nationale d'Agriculture et pour le Développement du Commerce. Greek entrepreneurs created factories, mills, bars and restaurants (the Ṭaytu Hotel was named Hotel Bololakos after the name of its first manager), while traders developed markets in Addis Abäba and in Harär.

Greeks were also gardeners, hair-dressers, tailors, carpenters, masons etc.

After 1916, more Greek families decided to settle in Ethiopia. The establishment of the Greek community can be traced by a few key dates: the first bishop was designated in 1908; the first school built in 1915; the Greek consulate opened in 1918; the first Greek newspaper, "*Ethiopikòs Kósmos*", founded in 1927; a Greek church built in 1935. At this time, the Greek community consisted of approximately 3,000 persons, which made it the second foreign community after the Arabs. They were running some 30 factories, 2 cinemas, 4 garages, 15 import-export enterprises and 20 retail shops. But in one way, this quite exclusive network of Greek institutions in an Ethiopian context prevented the Greek community from a proper integration into Ethiopian society, while some of its members developed a kind of superiority complex, which created some tensions between Greeks and Ethiopians. A prominent personality of this time was Iakovos (James) ↗Zervos who became ↗Ḫaylä Śəllase I's physician and personal confidant. He never had an official title, but the Emperor bestowed upon him the title of ↗*bitwäddäd* for his services.

In Addis Abäba Greeks were principally involved in four types of enterprises: construction and building trades, small scale or light industry, international and local trade and small shop-keeping and services. Of the ca. 200 European-style houses that were constructed by this time, over 100 had been erected by Greeks. Some of the major public constructions in and around the city included St. George Church (↗Gännätä Ṣəge Giyorgis), constructed by Panayotis Myriallis, following the design of Castagna, the Italian chief engineer of the Emperor. Greek builders were active in the immediate countryside where they constructed roads and bridges. E. Makras, another former railway sub-contractor, built the first paved road from the capital to ↗Addis ʿAläm, with a distance of about 50 km. The contractors and builders employed their own countrymen as masons, carpenters and in other skilled capacities, while generally employing Ethiopians for unskilled labour.

During the first two decades of the century, many Greeks opened small shops, ranging from groceries and bakeries to various repair shops. Virtually all the eating places, inns and cinemas in the capital were owned or managed by Greeks. These small enterprises included Antonopoulos (general store), Mastropetro (gun repair), Pekatos (watchmaker), Kourtessis (general store and café), Ortengatos (Café and restaurant), Balambaras Giyorgis Fotis (curio shop). The first European-style hotel, the Imperial, was run by Bololakos (Natsoulas 1989:219–42).

The growth of Addis Abäba attracted many of the Harär and ↗Djibouti-based Greek mercantile houses. Branches were established in the capital and in many instances the headquarters were transferred. Some of the Greeks became agents of French and British commercial houses that were centred in the Middle East. As in the past, they were principally involved in the export of coffee, and secondarily skins, ↗tobacco and other products.

In the early 20th cent. western Ethiopia was another major area of Greek enterprise. A new international commercial route was established through eastern Sudan and Khartoum. The first Greeks to come to ↗Gambella, the major eastern town, were those that had been active in the eastern Sudan during the 19th cent. and Greek from Cyprus who followed the British after their conquest in 1898. Gambella was in the lowlands, so Greeks tended to settle in the highland towns of ↗Gore, ↗Bure and, especially, ↗Dambi Dolloo. These towns became minor entrepots, and the entire area was opened to trade to Khartoum. In representing several large Sudanese firms as well as establishing their own, Greeks organized the export/import trade of the area, coffee being again the most important export commodity, followed by rubber and bee wax, whilst imports included liquor, textiles and other manufacture products. Some Greeks also received from the court special concessions to exploit the agricultural and mineral wealth of the region, including coffee, Indian rubber, rubber, mica and gold.

The period between 1936 and the beginning of the 1960s' is poorly documented. One can mention Pierre Pétridès, counsellor in the Ethiopian embassies in Cairo and Turkey and adviser to the Foreign Ministry (1955–74).

The decline of the Greek community begins in the 1960s after the abortive coup d'état against Ḫaylä Śəllase. Most of its members began to transfer their money out of Ethiopia, looking for a more secure place for their activities and feeling that the rise of African independence would not be favourable to them. In 1974, enterprises belonging to Greek people were nationalized and their owners and their families left Ethiopia. But, since 1991, some of them have concluded agreements with the Ethiopian Privatization Agency and have taken back their properties. This is the case for instance of the famous Bambis supermarket in Addis Abäba.

In 1970 *Abba Salama, a review of the Association of Ethio-Hellenic Studies* was created, sponsored by the Commercial Bank of G. This review published ten issues until 1979. A large number of articles were dedicated to inter-Orthodox and ecumenical dialog and to the history of Ethio-Hellenic relationships since antiquity.

Theodore Natsoulas – Anaïs Wion

Greek literature on Ethiopia

In G.l., Ethiopians (Αἰθίοπες, *Aithíopes*, lit. 'those having [sun]burnt faces', cp. ↗ Aithiopía) appear for the first time in the Homeric poems (ca. 8th cent. B.C.), the *Iliad* (I, 423ff.; XXIII, 205ff.) and the *Odyssey* (I, 22ff.; IV, 83; V, 282, 287). They are portrayed as a people renowned for their piety, dwelling in a land that is the preferred resort of the gods and that coincides with the edge of the world. However, it is hard to assess what degree of real knowledge these references inspired. Homer's division of the Ethiopians into two parts, those living where the Sun sets and those where it rises, probably echoes the attribution of the name Ethiopians to all dark-skinned peoples east and west of the Erythraean Sea – as it was common among ancient Greeks.

Ethiopians and their land occupy a considerable place in mythological tradition. Their piety is reflected in the legend of the women warriors, the Amazons, who conquered the island of Hespera and destroyed all its cities, except for Mene (Μήνη), the sacred city of the Ethiopians. Ethiopia was also the remote country par excellence, as implied in the fate of Eumolpos, son of Chione (Χιόνη), whom Poseidon saved by entrusting him to the Ethiopians. It is also noteworthy that, in Homer, the goddess Athena hastened to intercede with Zeus in favour of Ulysses when his enemy Poseidon was on a visit to far away Ethiopia, the south-easternmost land, near the Ocean.

The association of Ethiopia – as the beginning and the end of the daily celestial journey of the Sun – with sunlight emerges in several myths. Hesiod (8th cent. B.C.) records that the goddess Heos (Ἕως, 'Dawn') took Tithonos to Ethiopia, where they had two sons, Memnon (Μέμνων) and Emathion (Ἠμαθίων), both of whom became kings of the Ethiopians (*Theogony*, 984f.). In a legend that locates the Garden of the Hesperides not in the west, as was usually the case, but in Ethiopia, Hercules kills Emathion when the latter tries to prohibit him from obtaining the golden apples. Memnon appears in the lost epic *Ethiopis* (possibly earlier than the *Iliad*) as an ally of the Trojans, to be finally killed by the Greek Achilles. Her mother pledges Zeus to grant him immortality and buries his body in his homeland. In this myth Ethiopia was originally located in the east, and later, by the Hellenistic period, in the Upper Nile Valley.

Ethiopia also appears in the labours of the mythical hero Perseus (Περσεύς). Andromeda (Ἀνδρομέδα), the daughter of Kepheus (Κηφεύς) king of Ethiopia, was offered as an expiatory sacrifice to a sea monster sent by Poseidon to punish queen Cassiope for her arrogance. Kepheus agreed with the king to save the girl and take her as his wife in return.

These mythological episodes were later used by the great dramatists of the 5th cent. B.C. In his *Prometheus Bound* and *Prometheus Unbound* Aeschylus mentions the remote Ethiopia where the sun rests, and in his *Memnon* and *Psychostasy* he elaborated on Memnon's myth. Sophocles wrote the *Ethiopians* and, like Euripides, composed an *Andromeda*.

More precise information is preserved by the historians. Herodotus (5th cent. B.C., *Histories*) declares that he had travelled up to Elephantine (by the borders between Egypt and Nubia). Although following the common use of the term Ethiopian to denote dark-skinned peoples, he also identifies explicitly Ethiopia with Nubia, and names ↗Meroes as its capital city. Moreover he records the Persian King Cambyses' superficial campaign against the Macrobian (long-living) Ethiopians and describes the Ethiopian warriors in the Persian King Xerxes' army during his unsuccessful campaign against Greece in 480 B.C. (*Histories*, II, 29f., 89, 104, 106, 134-40, 152; III, 17-25, 97, 144; IV, 69f., VII, 61, 69f., 150; IX, 32). According to Diodorus of Sicily (ca. 1st cent. B.C.), the Ethiopians claimed that they had colonized Egypt. He also narrates how Ergamenes, a Meroitic king of Greek education, opposed to the powerful priests of the country (*Universal History*, I, 33 and 37; II, 22; III, 2-34).

The work of geographers is of great importance. Agatharchides of Cnidus (2nd cent. B.C.) wrote *On the Erythraean Sea*, which, although no longer extant, has been a source for Diodorus and Artemitorus of Ephesus who, in turn, served as a source for ↗Strabo. Agatharchides acknowledges the regions south of Egypt as Ethiopia, speaks of the Ethiopian gold-mines, fauna, weaponry etc., and refers to the campaign of the Egyptian monarch Ptolemy II Philadelphus against Ethiopia (i.e., Nubia) in the 270s B.C. Agatharchides describes several Ethiopian groups, such as the Ichthyophagoi and the Troglodytai. Among the attempts at identifying the modern descendants of Agatharchides' Ichthyophagoi (Ἰχθυοφάγοι, 'Fish-eaters'), the most likely seems to be that equating them to the ↗Beğa and with the Bisharin tribes, from the Eastern desert and the coast of Sudan.

Strabo (late 1st cent. B.C. – early 1st cent. A.D.) drew information from the cartographer Eratosthenes of Cyrene (2nd cent. B.C.) and Artemidorus, asserting that he also reached the Ethiopian mountains. He mentions Meroes as the capital city of the Ethiopians (apparently Nubians) and records that they were ruled by queen ↗Candace, whose royal seat was ↗Napata (*Geography*, XVI, 4, 7 and 13; cp. also Pseudo-Aristoteles, *Problemata* [898b], X, 66).

It was only by the 1st cent. A.D. that certain references were being made not only to Nubia (e.g., the Ethiopian Candace mentioned in Acts 8:27, was actually a Nubian sovereign), but directly to the Ethiopian kingdom of ↗Aksum. The kingdom is first mentioned in the work of an anonymous author, the ↗*Periplus of the Erythraean Sea* (mid 1st-cent. A.D.), while Claudius ↗Ptolemy (2nd cent. A.D., *Geography*) is the first to mention the Aksumites, though he is silent about the city of Aksum. In two novels, ↗Heliodorus' *Ethiopica* (3rd cent.) and Pseudo-Callisthenes's *Romance of Alexander the Great* (5th cent.; ↗Alexander the Great), the wisdom of the Aksumites is praised.

↗Cosmas Indicopleustes (*Christian Topography*) visited the kingdom of Aksum ca. 518. He considers the Ethiopians as descendants of Cush, one of Noah's sons who shared between them the entire earth up to the Ocean of Ethiopia. In ↗Adulis, at the order of the Aksumite king ↗Kaleb, he copied a now lost inscription – but probably related to an Aksumite king (late 2rd/early 3rd cent. A.D.) – which celebrates the extension of his sovereignty over the Ethiopian highlands and his campaign to South Arabia (↗Monumentum Adulitanum). The king expounds his victories over several peoples, among whom the Gaze (Γάζη) nation, whom Cosmas (or perhaps a slightly later interpolator) identifies with an Ethiopian group of his times: the Agaze (Ἀγάζη), i.e. the ↗Agᶜazi.

The Christianisation of Ethiopia is mentioned in several Greek texts. The early Byzantine historian Socrates (late 4th-early 5th cent., *Church History*) records a tradition that ascribes its evangelization to the apostle Matthew, while Gelasius of Cyzicus (5th cent.) speaks of the apostle Bartholomew (*Church History*, III, 9, 2). Irenaeus of Lyons (2nd cent., *Elenchus*) and ↗Eusebius of Caesarea (4th cent., *Church History*) both state that Ethiopia was the first gentile land to accept Christianity. Socrates, Sozomenos (early 5th cent., *Church History*, II, 24, 1f.) and Theodoretus (5th cent., *Church History*, I, 23), possibly depending upon ↗Rufinus, describe the missionary work of Frumentius (early 4th cent.; ↗Sälama Käśate Bərhan), while according to Philostorgius (late 4th-early 5th cent.), an attempt at introducing Arian Christianity into Aksum was made in the mid-4th cent. by ↗Theophilos the Indian (*Church History*, III, 4, 7). Several texts refer to a possible re-evangelization and the war between Ethiopians and Ḥimyarites in the first half of the 6th cent. (Procopius, 6th cent., *Wars*, I, 19f.; Malalas, 6th cent., *Chronography*, XVIII, 433f., 458; ↗Nonnosus, 6th cent., *Fragments*, IV, 179; Theophanes, late 8th-early 9th cent., *Chronography*; Photius, 9th cent., *Bibliotheca*, I, 4, 24, 147-52; VII, 134-89; Cedrenus, 12th cent., *Synopsis of Histories*, I, 656). Information about 6th-cent. Aksum is also provided by the texts related to the establishment of the Christian Ḥimyarite kingdom after the war with the Ethiopian and the latter's invasion of South Arabia (*Martyrdom of St. ↗Arethas*; *Laws of the ↗Ḥimyarites*; *Life of St. ↗Gregentius, Bishop of the Ḥimyarites*; *Disputation with the Jew Herban*).

Finally, innumerable are the references to Ethiopia and its people in Greek patristic and ascetic literature. In most cases they are exegetical rhetorics, either conceiving the encounter of the Gospel with remote Ethiopia as the symbol of the Ecumenicity of the Christianity or using black colour as a metaphor for sin and vice.

Greetings

Greetings in Amharic

The traditional canons of Ethiopian etiquette are well regulated and far from empty ceremoniousness. Ethiopians are generally polite and show consideration and respect to each other. When people meet on the road, they will inquire after each other's health, followed by inquiries after other members of the family. The exchange of the formulae of G. may take fully a minute or two. A low bow is a must in almost all instances. When relatives or friends of either sex meet after a long separation, they usually kiss each other on the mouth or on both cheeks repeatedly, the older or superior in status kissing first. The handshake is customary among equals. When hands are joined, they remain in this position throughout the entire greeting. A younger or subordinate person often greets an older or superior person by putting his left hand under his stretched right forearm. When people are sitting together, they usually greet an incoming person by rising from their seats.

Among the Amhara people the formula ጤና፡ ይስጥልኝ (*ṭena yəsṭəlləññ*, lit. 'May He grant you health for my sake!') is the general greeting of welcome or of parting and may be used any time for any person. The word ሰላም (*sälam*, 'peace') is also used as a substitute for *ṭena yəsṭəlləññ*, usually by the young people.

The other formulae are more specific in meaning and their verbal forms differ according to the addressed person, i.e. the polite form (the form 2nd pers. sg. masc./fem./pl.).

The most common of the G. on meeting are:

Good morning! – እንደምን [እንዴት] አደሩ [አደርክ/አደርሽ/አደራችሁ] (*əndämən* [*əndet*] *addäru* [*addärk/addärš/addäraččəhu*], lit. ‘how did you [2nd pers. sg. polite/masc./fem./pl.] pass the night?’);
Good afternoon! – እንደምን፡ ዋሉ [ዋልክ/ዋልሽ/ዋላችሁ] (*əndämən walu* [*walk/walš/walaččəhu*], lit. ‘how did you spend the day?’);
Good evening! – እንደምን፡ አመሹ [አመሸህ/አመሸሽ/አመሻችሁ] (*əndämən amäššu* [*amäššəh/amäššəš/amäššaččəhu*], lit. ‘how did you spend the evening?’);
How are you? – እንደምን፡ አሉ [አለህ/አለሽ/አላችሁ] (*əndämən allu* [*alläh/alläš/allaččəhu*]).

Greetings on leaving are:
Good night! – ደህና፡ ይደሩ [እደር/እደሪ/እደሩ] (*dähna yədäru* [*ədär/ədäri/ədäru*], lit. ‘spend the night well’);
Good day! – ደህና፡ ይዋሉ [ዋል/ዋይ/ዋሉ] (*dähna yəwalu* [*wal/way/walu*], lit. ‘spend the day well’);
Good evening! – ደህና፡ ያምሹ [እምሹ/እምሺ/እምሹ] (*dähna yamšu* [*amšu/amši/amšu*], lit. ‘spend the evening well’);
Good-bye! – ደህና፡ ይሁኑ [ሁን/ሁኚ/ሁኑ] (*dähna yəhunu* [*hun/ huñ/hunu*], lit. ‘be well’);
So long! / See you! – በሉ [በል/በይ/በሉ] እስክንገናኝ (*bälu* [*bäl/bäy/bälu*] *əskənnəggänaññ*, lit. ‘until we shall come together again’).

When greeting a person who has just arrived or come in, the following exchange of phrases characteristically takes place:

- Welcome! – እንኳን፡ ደህና፡ መጡ (*ənk^{w}an dähna mäṭṭu*, lit. ‘be glad you [polite] came safely’);
- Thank you! – እንኳን፡ ደህና፡ ቆዩ (*ənk^{w}an dähna qoyyu*, lit. ‘be glad you [polite] remained well’).

Greetings in Təgrəñña

The traditional opening greeting expression in Təgrəñña is ጥዕና፡ ይሃበለይ (*ṭə^{c}ənna* (*yə*)*habälläy*, ‘May (God) give (you) health on my behalf!’). It is still used in rural areas, in the first place in Təgray, predominately when addressing the elders.

What follows is a question (of both speech act partners) of how well the addressee is in general or has been during a certain time span preceding the current speech act. This time span may be (a) not more than one day, i.e., the night-time, the morning, the daytime, the evening, or (b) more than one day, i.e., a week or a season.

The most usual questions, without specific time reference, are ከመይ፡ አሎኻ [-ኺ/-ኹም/-ኽን] (*kämäy* [*ʾa*]*lloḵa* [-*ḵi*/-*ḵum*/-*ḵən*], ‘how are you [sg. masc./fem./pl. masc./fem.]?’), ደሓንዶ፡ አሎኻ [etc.] (*däḥando ʾalloḵa* [etc.], ‘are you well?’), and slightly more informal ከመይ፡ አሎ (*kämäy ʾallo*, ‘how is it going?’). All these questions are today the most frequent opening greeting formulas.

In the morning one refers to the previous night with the understanding of a meeting one day before, i.e.: ከመይ፡ ሓዲርካ (*kämäy ḥadirka* [etc.]; also ከመይ፡ ሓደርካ, *kämäy ḥadärka* [etc.], lit. ‘How did you [sg. masc./fem./pl. masc./fem.] spend the night?’) or ደሓንዶ፡ ሓዲርካ (*däḥando ḥadirka* [etc.], lit. ‘Did you spend the night well?’).

In the late morning the converbal morpheme *ḥadir-* is substituted by አርፊድ (*ʾarfid-*), in the afternoon by ውዒል (*wə^{c}il-*) and in the evening by አምሲ (*ʾamsi-*). When referring to a week or more one uses ቀኒ (*qänni-*; after the vowel, *k* of the suffix is aspirated: *qänni-ḵa* [etc.]).

In the countryside one can refer to the respective seasons: ከመይ፡ ቀዊዕካ (*kämäy qäwwi^{c}-ka* [etc.], ‘how did you spent the harvest time?’, ከመይ፡ ሓጊኻ (*kämäy ḥagi-ḵa* [etc.], ‘how did you spent the dry season?’), ከመይ፡ ጸዲኻ, (*kämäy ṣäddi-ḵa* [etc.], ‘how did you spent the season for sowing?’), ከመይ፡ ክረምካ (*kämäy kärim-ka* [etc.], ‘how did you spent the rainy season?’).

In dialects, the plural masc. form *-kum* can be replaced in all cases by *-ḵum* or *-ḵatḵum*; a more polite form would be *-om* (e.g., *kämäy ḥadir-om*).

The answer to all these questions is እግዚአብሄር፡ ይመስገን፡ ደሓን [or simply ይመስገኖ] (*ʾəgziʾabəher* (*y*)*əmmäsgän, däḥan* [(*y*)*əmmäsgänno*], ‘praise to God, well!’). The word for ‘God’ can also be pronounced *əgzer*, *əzger*, *əgzihar* or *əzgəhar*. The Muslims say *alḥamdullah*(*i*) instead. A wide-spread response is ደሓን፡ አሎኹ / እየ (*däḥan ʾalloḵu / ʾəyyä*, ‘I am fine’) or ደሓን፡ አሎ (*däḥan ʾallo*, ‘it is fine’). Naturally, the person asked has to reciprocate by applying the same formulas to the other person.

A more informal and more recent greeting expression is ሰላም (*sälam*) or ሰላማት (*sälamat*, ‘greetings’). As response, these phrases are repeated.

The farewell expressions refer to the approaching time, be it the day, the evening, the night, the week or a longer period of time: ደሓን፡ ውዓል (*däḥan wə^{c}al* [*-i*, *-u*, *-a*], ‘Have a nice day!’), ደሓን፡ አምሲ (*däḥan ʾamsi* [etc.], ‘Have a nice evening!’), ደሓን፡ ሕደር (*däḥan ḥədär* [etc.], ‘Have a good night!’), ደሓን፡ ቀኒ (*däḥan qänni* [etc.], ‘Have a good week/fortnight!’ [etc.]), and in general ደሓን፡ ኩን (*däḥan kun* [etc.], ‘Have a good time!’).

Rainer Voigt

Greetings in Oromo

A common feature of all ↗Oromo G. is wishing each other peace (*nagaa*) and asking about each other's well-being. Conversation usually begins with *Akkam ğirta/ğirtu*? ('How are you doing?'), *Akkam bulte/bultani*? ('How did you pass the night?'), or *Akkam oolte/ooltani*? ('How did you pass the day?').

The expected answer is usually: *Gaarii* (*da*) ('well'); *Fayyaa* (*da*) ('fine') or *Nagaa* (*da*) ('[in] health/good state'), to which is often added *galata Waaqaa* ('thanks to God'). The responding person now asks the same question in return.

There may also occur a direct exchange of question and counter-question: *Akkam bulte*? – *Akkam bulte*?; *Naguma*! – *Naguma*! ('Peace!'). Boorana often greet each other *Bultini nagaa*? ('Have you passed the night at peace?') – *Nagaa, nagaa* ('[at] peace, [at] peace'; cf. Baxter 1990: 245; Leus 1995:610). As a rule, the polite exchange of greetings is extended according to the age and status of the individuals involved in the conversation.

Greeting each other by use of the term *nagaa* means in a larger sense: 'may you be healthy', 'may you not become ill', 'may you experience no fighting or disagreements with others', 'may you enjoy protection from harm', 'may you be in proper relationship with God (the sky) and the earth, people and cattle' (van de Loo 1991:278f.). At farewells, the term *nagaa* is taken up again, for instance when wishing each other to return home in peace: *Nagaatti gali/galaa*.

The Oromo hold a strong ideal of peace in society, at least within their subgroups. Peace exists where people observe their appropriate role in the community and respect the established order. Disturbing the peace of society would mean to disturb the peace of God (Baxter 1965:65f., 75). Blessings and prayers for peace, mostly given by elders, are constantly invoked on occasions of Oromo ceremonies and meetings.

Greetings in body language

G. is a basic feature of body language, marking the beginning of a social interaction and partially defining the social relation of the participants. In Ethiopia and Eritrea, gesticulatory forms of G. vary considerably from region to region and depend largely on kinship and class relations, as well as relative age, gender, religion and other determinants of status and situational roles.

According to the social context and certain "grammatical" rules, the different gestures of G. (gesticulatory elements) can be combined. In informal situations, the freedom to combine these elements is much greater than in formal or ritualised situations. The multi-ethnic and partially globalized society of today's Ethiopia and Eritrea allows the parallel or amalgamated usage of G. forms of different cultural origins.

The basic gesticulatory elements of G. are: shaking or holding hands (one or both hands involved), raising of one or both hands (showing palm[s], waving, saluting), hugging, kissing and bowing. The types of G. are differentiated further by the intensity and quantity of gesticulatory elements. For example, if the participants in a conversation have not seen each other for a long period, the quantity is increased by repeating oral and gesticulatory G. Different intensities are connected each with a different meaning, ranging from only suggesting the full gesture to its theatrical exaggeration.

For the hand-shake, the G. partners stand face-to-face and hold each other with the open palms of their right hands. As a symbol of respect or subordination, the left hand supports this gesture by touching the right forearm or elbow. It is considered polite to press the hand of the partner only very gently. Hand-shaking as well as raising the hands and showing the open palms in a Christian setting is often combined with bowing of the head or the upper part of the body. Muslims in general avoid bowing, for they reserve this gesture of devotion "for God only". Instead of nodding or bowing, Muslims may lay their hand on the left side of their chest where the heart is. Some Muslim women avoid the hand-shake (and eye-contact) with a stranger or give their hand only through their veil.

Sidaama women greeting each other; photo 1954/55 by Elisabeth Pauli; courtesy of the Frobenius Institut, Frankfurt am Main (027–Pa017–37)

Between equals or relatives it is common to embrace each other. This can be combined with hand-shaking as well as kissing. There are various forms of embracing. A characteristic form especially in the highlands with many regional variants is "shoulder-hugging" between members of the same sex. In this form of G., the two partners touch the shoulder(s) of the other with their own shoulder(s) subsequently. This can be done a couple of times, either with the two right shoulders or with right and left shoulders. During "shoulder-hugging" the hand(s) hold the hand(s), arm(s) or shoulder(s) of the other person or he/she is embraced.

Kisses are carried out by touching a body part of the other with both lips. Kisses are very often only implied by bringing the lips near to the other's body, sometimes enforced by non-verbal sounds (e.g., in Təgray and Eritrea). Depending on the relation between the participants, different parts of the body may be kissed expressing different grades of intimacy or familiarity (forehead, cheeks, mouth) or subordination/devotion (shoulder[s], knees, hands, feet). The kissing of the feet expresses deepest subjugation. Among the Amhara and Təgray traditionally the child up to the age of 15 had to kiss the feet of the father and the servant had to kiss the feet of his lord after washing them.

The kissing of the hand-cross of a priest, which automatically involves bowing, can be understood as a G., but the addressee of this action is more the "sacral sphere", in general, than the priest as a person. Mainly among Muslims the palms of an elder are kissed by those who received his blessing. Here a similar interpretation can be made.

Bowing ranges from nodding to a full prostration. It can be a single gesture, but is often combined with others. Equals can bow without any indication of status difference, while asymmetrical bowing is a clear sign of hierarchy. The low-ranking person is expected to bend down considerably lower than the higher-ranking person. In the case of subject and emperor or king and vassal and lord respectively, a full prostration of the inferior expresses his/her total subjugation.

Dirk Bustorf

Gregentius

Archbishop of ↗Ẓafār (South Arabia) and saint, G. (Gr. Γρηγέντιος, *Grēgéntios*, fl. second quarter of the 6th cent.) is chiefly known from his Greek Vita (BHG³ no. 705 [= CPG 7009], also preserved in a Slavonic translation), according to which he travelled from his native Moesia to north and central Italy (including Rome), hence sailing to Alexandria, where Patriarch Proterius (actually Timothy III) sent him as a bishop to the land of ↗Ḥimyar. This was to comply with the request of a bishop by the Aksumite king ↗Kaleb Ǝllä Aṣbəḥa (Ἐλεσβοάμ), who had just gained total control over Ḥimyar by defeating the Jewish king ↗Ḏū Nuwās (Δουναᾶς) – in 523/4 or 525 – as a reaction to the martyrdom of Christians in ↗Nağrān (Νεγρά).

In his biography, G. appears to have played an important role in the restoration of South Arabian Christianity: together with Kaleb, who went then back to Aksum, he consecrated several churches in Nağrān, Ẓafār (Ταφάρ/Τεφάρ), Qānaʾ ('Ακάνα), as well as in the obscure Atárph/Atephár ('Ατάρφ/'Ατεφάρ) and Legmía (Λεγμία, s. Shahîd 1979:38-53 and Fiaccadori 1985:198f., 210f.). After remaining some thirty years in Ẓafār at the side of ↗Abraha ('Αβράμιος), the newly appointed Aksumite viceroy of Ḥimyar, G. died on 19 December, and on this day his liturgical memory is celebrated in the Byzantine Church (Fiaccadori 1980:314, n. 79).

Beside his Vita, known only from excerpts published by Vasiliev (1907, a complete ed. being prepared by Albrecht Berger), two other Greek hagiographic texts are traditionally linked with the name of G. and his staunch activity in re-establishing Christian orthodoxy all over Ḥimyar and converting the Jews living there: the so-called *Laws of the Ḥimyarites*, issued by him to the benefit of his South Arabian flock at the request of Abraha, and the *Disputation with Herban the Jew* (BHG^{3} nos. 706h-i and 706d [= CPG 7008 and 7009] respectively), i.e. the record of the contention about the true faith he held with the Jewish law-teacher Herban. In fact subsequent compilations not always transmitted together, both texts are of middle-Byzantine origin (the latter, though, seeming to echo juristic features of pre-Islamic South Arabia, s. Irvine 1967:290f.), and formally belong in the known hagiographic tradition that was shaped not before the late 9th or early 10th cent. as a continuation of the Acts of ↗Arethas. It was probably then that the end of the Vita was detached and placed after the *Disputation*, as a conclusion to the entire dossier.

Within such a belated and legendary dossier, however, the final or "Arabian" section of the Vita provides valuable information: if not on G. himself, certainly on Ethiopia and South Arabia at the time of the 6th-cent. Aksumite intervention(s). Part of the materials used here by the compiler, especially in terms of historical topography, must go back to the 6th cent. (a similar story on the consecration of churches in South Arabia is, e.g., in the *Book of the ↗Ḥimyarites*). Yet, a certain impact of Arabic sources must be considered that ultimately accounts – by subsequent misreadings and/or misspellings – for the Greek forms of a few puzzling names, and can be traced to the Melkite bilingual milieus of 8th/9th-cent. Palestine and Sinai (s. Fiaccadori 2003:184f., 233f.).

For instance, the son of Kaleb, called 'Αθερφοθάμ (*Atherphothám*) in the Vita, is none other than ↗Gäbrä Mäsqäl: from Ar. **Ġbrmsql* > **ʿṯrfṯʿl* via Gr. *ΑΘΕΡΦΟΘΑΑΛ > ΑΘΕΡΦΟΘΑΜ; the Ethiopian capital city, 'Αμλέμ (*Amlém*) is Aksum: from Ar. **ʾlʾksm* (= **al-Aksum*, exceptionally with the article) > *ʾlʾlsm* via Gr. *ΑΛΑΛCΜ > (*ΑΛΑΛΕΜ >) ΑΜΛΕΜ; the name of the place to which Kaleb retired on abdicating, 'Οφρά (*Ophrá*), said to be a βουνός (*bounós*, 'mount[ain]'), seems to conceal the Ethiopic word ↗*däbr*: from Ar. **dbr* (glossed as *ğabal*, i.e. βουνός?) > **wfr*, possibly hinting at the hermitage of his spiritual mentor *abba* ↗Ṗänṭälewon on a high *däbr* ('mountain') found to the north of Aksum and simply designated as such in the 15th-cent. *Gädlä Ṗänṭälewon* ('Vita of Ṗänṭälewon', ch. 3: Conti Rossini 1904:45-48, s. Nosnitsin in StudAeth 92, n. 6). Likewise, as pointed out by Maxime Rodinson (1965/66: 140), the expression Μηδέκιον (vars. Δαικκέον, Δεκκαιόν) ἄντρον (*Mēdékion ántron*) includes the Arabic name of ↗Bāb al-Mandab, *Maḍīq* (lit. 'Strait'), which is *Madiq* in the Ethiopic Acts of Arethas, translated from Arabic in the 13th cent. (Esteves Pereira 1899:115, s. 160 n. 1 on στενὸς τόπος, 'narrow place' in the Greek Acts). A similar connection for the whole dossier – of which partial Arabic versions of uncertain age are barely known (GrafLit vol. 1, 370) – is advocated by the name of Abraha's son found in the *Disputation*: Σέ(ρ)διδος, i.e. Σεράϊλος/-αῖλος or Σερίλος (*CEP[A]IΛOC > CEP[Δ]IΔOC), corresponding to Šarāḥīl, son of Abraha b. aṣ-Ṣabāḥ of the Ḥimyaritic tradition (von Gutschmid 1880:742f.; cp. Shahîd 1979:230).

Gianfranco Fiaccadori

Gregory of Nazianzos

G. (ጎርጎርዮስ, *Gorgoryos*, also ግርጎርዮስ *Grəgoryos*; born ca. 329) was a native of Arianzos, a village of Cappadocia near the episcopal see of Nazianzos (እንዚናዙ, *Ǝnzinazu* also ናዛዚ, *Nazazi*). He was one of the three "Cappadocian Fathers", together with his friend ↗Basil the Great and the latter's brother ↗Gregory of Nyssa. G. was a rhetor, poet and saint, and due to the importance of his dogmatic writings he was also known as "the Theologian" (ቴዎጎሎስ, *tewogolos*; ቴዎግሎስ, *tewoglos*; ታኦጎሎስ, *taʾogolos*; ታዋሎጎስ, *tawalogos*).

G. was born to a wealthy Christian family; his father was bishop of Nazianzos. After studies in Athens, where he met and befriended Basil the Great, he returned to his family estate in Arianzos in ca. 357. Baptized in 358, he entered monastic life in Iris, Pontos (358/59 – ca. 362). Whilst serving as a priest, he was ordained Bishop of Sasima in 372, but never officiated there, and soon returned to monastic life. After his father's death in 374, he administered the see of Nazianzos. In 379 he was summoned to serve as bishop of the small Nicene community in the see of Constantinople, whereas the majority – congregation and priests – was Arian. At that time G.'s great reputation as a theologian paved the way for him to preside at the Second Ecumenical Council at Constantinople (381). However, disappointed with ecclesiastical politics, he resigned and resumed the administration of the see of Nazianzos. In 383, when a new bishop was appointed there, he withdrew to pursue an ascetic life at his family estate in Arianzos, where he remained until his death (390).

G. wrote a series of 45 *Orations*, some of which were funerary, and five of them, 27–31, form the so-called *Theological Orations* against contemporary heresies. He also left a series of 245 *Letters* (of which 101, 102 and 207 are of great theological importance) and a number of poems (e.g., the autobiographical *De vita sua*).

As a theologian, G. was a champion of the Nicene (Neo-Nicene) orthodoxy and, together with Basil, contributed to the development of Trinitarian doctrine. His *Orations* were translated into Latin, Slavonic, Armenian, Georgian, Syriac, Coptic and Arabic.

The following writings are attributed to G. in Ethiopia (none of them having been critically edited).

1. Several extracts are transmitted in the patristic collection ↗*Haymanotä abäw*:

a. *Homily on the Equality* (of the hypostases) *in the Trinity* (በእንተ፡ ዕሪና፡ ቅድስት፡ ሥላሴ, *Bäʾəntä ʿərina qəddəst śəllase*, 'On the Equality of the Holy Trinity');

b. *Homily on the Son* (በእንተ፡ ወልድ, *Bäʾəntä wäld*, 'On the Son');

c. another *Homily on the beloved Son* (በእንተ፡ ወልድ፡ ፍቁር, *Bäʾəntä wäld fəqur*), which is not an authentic work but a free adaptation of a homily by Patriarch Gregory of Antioch, d. 592/3 (Graf 1937:379);

d. *Letter to Cledonius* (አቅልዲዮስ/ አቅላንድዮስ), an excerpt from "Letter 101": *To Cledonius* (Migne 1842, vol. 37, 177B–181A; CPG 22, no. 3032); this fragment is sometimes transmitted independently, as in ms. Ṭānāsee 52, fol. 111rb–112rb;

e. *Homily on His* (i.e. Christ's) *Nativity* (በእንተ፡ ልደቱ, *Bäʾəntä lədätu*), which was taken from *Oration* 38, §13 (Migne 1842, vol. 36, 325 B–D; CPG II, no. 3010);

f. in the Anathemata part of the *Haymanotä abäw* there are 12 "Anathematisms" (ቃለ፡ ግዘት,

qalä gəzat) which are said to come from the *Homily on the Letter to Cledonius*, but are in fact excerpts from G.'s *Letter* 101: *To Cledonius* (Migne 1842, vol. 37, 177Bff.; CPG II, no. 3032), which were "translated from Coptic into Arabic" (**እምዘተርጐሙ፡ ዝንቱ፡ እምቅብጢ፡ ኀበ፡ ልሳነ፡ ዓረቢ**, *əmzätärgʷämä zəntu əmqəbṭi ḫabä ləssanä ᶜaräbi*);

g. it would appear that only a few manuscripts of the *Haymanotä abäw* have additional "Testimonies" (**ስምዓት**, *səmᶜat*), and these writings address the Incarnation and include a quotation from G. (Graf 1937:402; s. ms. EMML 2051, fol. 213r–216r).

2. *Homily ... on the Holy Easter* (**ድርሳን፡ … በእንተ፡ ቅድስት፡ ፋሲካ**, *Dərsan ... bäʾəntä qəddəst fasika*), extant in the Homiliary in BritLib Orient. 775 (fol. 111v–118v, from the 15th cent.), is either G.'s First or, more probably, Second *Easter Oration* (number 1 or 45 in the whole collection; s. CPG II, no. 3010); both *Orations* also exist in Arabic (Graf 1937:330);

3. One of G.'s Homilies for Saturday is included in the *Homiliary for Lent* in ms. EMML 1956 (fol. 57r–59r; from ca. 1400, ↗Däbrä Ḥayq Ǝsṭifanos); G. is quoted in:

4. the *Mäṣḥafä ↗ḥawi* (s. ms. BritLib Orient. 784);

5. the *Catena Commentary on the Gospel* (↗*Tərgʷame wängel*) of Syriac origin (Lusini 1988:473; s. ms. BritLib Orient. 736, fol. 37v);

6. an extract *On the Incarnation of the Logos* (**በእንተ፡ ተሠግዎቱ፡ ለእግዚአብሔር፡ ቃል**, *Bäʾəntä täśäggəwotu läʾəgziʾabəḥer qal*) by G., together with anathemas, appears in the 16th-cent. ms. Paris, BN, Éth. 113, fol. 341–44, and the 15th-cent. ms. EMML 1831, fol. 206r (perhaps the same as item 1f. above), in addition to two quotations on fol. 328 and three on fol. 337 (none of these belong to the *Book of Mystery* of Giyorgis of Sägla; van Donzel 1983:132);

7. ↗*Haymanot rətəᶜt* (cf. the 19th-cent. ms. EMML 632), containing many quotations from the fathers, and among them from G.;

8. the Anaphora called "of Gregory, brother of Basil" (**ጎርጎርዮስ፡ እኍው፡ ባስልዮስ**, *Gorgoryos əḫwä Basəlyos*, ms. BN Éth. 329, fol. 96va-102ra; VatLib Aeth. 39, fol. 76v–82), i.e. of Gregory of Nyssa, often attributed to G.; in certain manuscript traditions the attribution varies, referring to one of the other Gregories (Gregory of Alexandria, Gregory the Illuminator). Often, however, the attribution is just to "Gregory" without any further specification (Hammerschmidt 1987:23).

Miniatures of G., from 1667–82, can be found in EMML I, fol. 103v and in fol. 114v. According to the ↗*Sənkəssar*, G. is commemorated on 30 *Ṭərr* (5 February; BudSaint 569); in the Greek Orthodox Church, on 19 and 25 January.

Witold Witakowski

Gregory of Nyssa

G. of Nyssa (**ጎርጎርዮስ፡ ኤጲስ፡ ቆጶስ፡ ዘኑሲስ** *Gorgoryos eppis qoppos zänusis*, 'G. the bishop of Nyssa'; b. ca. 335–40, Caesarea, Cappadocia, d. ca. 395), one of the three "Cappadocian Fathers" – together with his elder brother, ↗Basil the Great, and ↗Gregory of Nazianzos – was a rhetor, theologian and saint. He was born to a wealthy family and educated at home by his brother Basil, his father, who was a rhetor, and his sister Macrina, a nun. In addition to Christian literature, G. was well, read in Greek philosophy. Although consecrated as a lector, G. left church life ca. 364, married a woman by the name of Theosebeia (d. 385) and worked as a rhetor. Later, the other two Cappadocians requested his assistance in ecclesiastical and theological matters and ca. 371, somehow forcing his will, he was consecrated as the second Bishop of Nyssa in Cappadocia. In 374, under accusation of dissipating Church money, he was deposed by an Arian synod, but reinstated to his position after the death of Emperor Valens, when Imperial support for the Arians ceased. After the death of his brother Basil, G. was regarded as the head of the Nicenes (↗Nicaea). He was even temporarily president of the Council at Constantinople in 381 and became thereafter one of the "normative" bishops of Emperor Theodosius I. G. was active at the Imperial court and wrote, *inter alia*, funeral homilies for the wife and daughter of the Emperor. He travelled to Jerusalem several times, and even to Arabia on ecclesiastical missions. In ca. 385 he withdrew from ecclesiastical politics.

The most speculative and mystical writer of the three Cappadocians, G. was renowned for his Trinitarian theology and ascetic ideas. G. was a prolific writer. His numerous works can be divided into the following categories (for full list s. CPG II):
1) Exegetical: *On Creation*, a supplement to the *Hexaemeron* of Basil; *On the Making of Man*; *Apologetical Explanation on the Hexaemeron*; *Life of Moses*; *15 Homilies* on the *Song of Songs*;
2) Polemical and dogmatic: *Against Eunomius*; *Antirrhetikos* (against the Apollinarists); *On the Holy Spirit against the Macedonians*; *The Great Catechism* (a manual of dogmatics that was greatly influenced by ↗Origen's theology).
3) Trinitarian writings: *To Ablabius* (explaining that there are not three gods); *To the Greeks*; *Against Eustathius* (on the *pneumatomachi*).
4) Ascetic and moral: *Dialogue on the Soul and Resurrection*, in which his sister Macrina plays the role of "the Master"; *Eight Homilies on the Blessings*; *On Virginity*; *Life of Macrina*; funeral homilies for the Princess Pulcheria and Empress Flaxilla.

The following writings are attributed to G. in Ethiopia (all unpublished):
1. Four extracts are transmitted in the patristic collection ↗*Haymanotä abäw*:

a. Fifteenth (in fact 13th) *Homily on the Song of Songs* (ትርጓሜ፡ መጽሐፈ፡ ሰሎሞን፡ ዘውእቱ፡ መሓልየ፡ መሓልይ, *Tərgʷame mäṣḥafä Sälomon zäwəʾətu mäḥaləyä mäḥaləy*, 'The Explanation of the Book of Solomon, which is the Song of Songs'; Graf 1937:371; CPG II, no. 3158);

b. *Homily on the Baptism of Our Lord* (በእንተ፡ ጥምቀቱ፡ ለእግዚእነ, *Bäʾəntä ṭəmqätu läʾəgziʾənä*, 'On the Baptism of our Lord'), in fact a work by Patriarch Gregory of Antioch, d. ca. 592 (Graf 1937:372);

c. *Homily* on Phil 2:5–7 from the *First Homily on the Blessings* (ኀልዩ፡ ዘንተ፡ በአልባቢክሙ፡ ምንት፡ ውእቱ፡ ንዴት..., *Ḫalləyu zäntä bäʾalbabikəmu mənt wəʾətu nədet*..., 'Consider this with your hearts, what is poverty...'; CPG II, no. 3161);

d. *Homily on Penance* (በእንተ፡ ንስሓ፡ ወዘከመ፡ ይረክብ፡ ተድላ፡ ወዕረፍተ..., *Bäʾəntä nəssəḥa wäzäkämä yəräkkəb tädla wäʿəräftä*..., 'About the penance, and how one can reach the heavenly pleasure and rest...');
2. an Anaphora of G. (↗Anaphoras), often with no further specifications (Hammerschmidt 1987: 25ff.), occasionally attributed to G. (ጎርጎርዮስ፡ እኅወ፡ ባስልዮስ, *Gorgoryos əḫwä Basəlyos*, s. VatLib Aeth. 39, fol. 76v–82), but in some manuscripts traced to one of the other G. (G. of Nazianzos, G. of Alexandria and G. the Illuminator).
Quotations from G. can be found in:
3. *Mäṣḥafä* ↗*ḥawi* (s. ms. BritLib Orient. 784);
4. the *Catena Commentary on the Gospel*, i.e. ↗*Tərgʷame wängel* of Syriac origin (Lusini 1988:473; ms. BritLib Orient. 736, fol. 37v);
5. the treatise entitled ↗*Haymanot rətəʿt*, possibly of the 18th cent. (e.g., ms. BritLib Ad. 16,199), with many quotations from the fathers;
6. *Questions* of G. to his Brother Basil the Great concerning the exegesis of certain place-names in the New Testament (GrafLit vol. 1, 325, 335, n. 8; cf. 17th-cent. ms. Dāgā Esṭifanos 33, fol. 32va–39rb.).

Additionally, G. is mentioned in compositions such as:
7. *Acts and Miracles of Mercurius*, with an episode describing how Mercurius (↗Märqorewos) helped Basil and Gregory when they were persecuted by Emperor Julian (ms. EMML 3290, fol. 43v–46r, from 1865–1913);
8. ↗*Täʾammərä Maryam* with an episode in which Mary appears to Gregory "Bishop of the Islands, brother of Basil (the Great)" (18th-cent ms. EMML 2058, fol. 164r–v);
9. Commemoration of the Death of Gregory, Brother of Basil (s. ms. BN Éth. 339 [Griaule 35], fol. 44vb–45vb), that is composed in the style of a ↗*Sənkəssar* entry; the latter work commemorates G. on 26 *Ḫədar* (BudSaint 289), but does not provide his life story.

Witold Witakowski

Griaule, Marcel Henri

G. (b. 16 May 1898, Aisy-sur-Armançon, Yonne, d. 23 February 1956, Paris) was a French ethnologist. The son of a railway station-director, G. studied in the Parisian lycée Louis-le-Grand and during World War I joined the air force, where he became an officer and a pilot. Later, he joined the seminars of Marcel Mauss and Marcel ↗Cohen – under whom he studied Gəᶜəz and Amharic – at the École Pratique des Hautes Études and the École des Langues Orientales Vivantes (↗Institut National des Langues et Civilisations Orientales), where he also defended his thesis.

After using local informants (among others, from ↗Bägemdər) in Paris, G. carried out a first mission to the Goǧǧam of *ras* ↗Ḫaylu Täklä Haymanot with Marcel Larget in 1928–29, during which he collected numerous materials. An outcome of the mission were two scientific works (1930, 1933) and a third piece of a more literary character (1934).

Later, G. led a project from the Muséum National d'Histoire Naturelle, a large-scale expedition that, mostly through the French possessions, crossed Africa from west to east: the famous Mission Dakar–Djibouti that took place from May 1931 to February 1933. The expedition, which included in its team Michel ↗Leiris and – in Ethiopia – *abba* ↗Jérôme, made lengthy stays in Mali among the Dogon and in Gondär. From Ethiopia, despite numerous obstacles, it brought back to France an important collection of manuscrits, paintings – copied by Gaston-Louis Roux – and ethnographical objects, kept today at the Musée de l'Homme – Trocadéro (to be moved to the Musée du Quai Branly; s. Jean Jamin 1996).

After the Italo–Ethiopian conflict began at the end of 1934 (↗Italian war 1935–36), the facts presented in G.'s works were used by the adversaries of Ethiopia to nourish their propaganda, especially in a report presented by Italy to the League of Nations in 1935. G. reacted by helping the Ethiopian delegation in drawing up their response and producing a book where he elaborated his advocacy of Ethiopia (1936).

During the German occupation of France, from 1940 to 1944, G. taught Amharic at the École des Langues Orientales Vivantes, replacing Marcel Cohen, excluded due to his Jewish origin, and additionally was appointed to the newly created chair of Ethnology at the Sorbonne. After the liberation of France, he abandoned Ethiopian studies to concentrate on Western Africa and specifically on the Dogon.

Alain Rouaud – Red.

GRMT

G. (South Arabian GRMT, conventionally rendered as Eth. Gärma[t], cp. ↗GDR[T] for -*t*; first half of the 3rd cent. A.D.) was the son of the Aksumite king *ᶜAzba (South Arabian: ᶜḎBH, also read WḎBH = Gr. ΟΥΑΖΕΒΑϹ, ↗Ouazebas, Eth. *WZB/↗WᶜZB?), who sent him to South ↗Arabia with an army, in terms of ↗Aksum's alliance with ↗Ḥimyar against Saba. He appears as *wld ngšyⁿ* (*mlk ᵓksmⁿ*), i.e. 'son of the *nəguś* [king of the Aksumites]', in two Sabaean inscriptions dating to ca. 230-40 A.D. and mentioning his military operations, with "tribes from Abyssinia [here the Ethiopian highlands] and Tihāma", at the side of the Ḥimyarite king ŠMR [YHḤMD] (Ja. 577.3, 6 and 585.14f., s. Robin in PICES 8, vol. 2, 147, 150f. [and n. 43], 153, 160). G. was defeated and, together with ŠMR, submitted to the Sabaean king ᵓLŠRH YḤḌB, but seems to have continued his war activities not far from ↗Nağrān (CIH 314 + 954). His name, connected with *gärämä* ('be frightful, become fomidable, admirable', cp. *gərämt*, *gərma* 'terror, majesty', with related onomastics: Gərma Asfär[e], G. Giyorgis, G. Ṣəyon, etc., Amh. Gərmaç̣ç̣əw), is possibly found in the "Aksumite" form ↗Gärima – which might even suggest a suitable vocalization for G.

[and n. 43], 153, 160.

Gianfranco Fiaccadori

Grohmann, Adolf

G. (b. 1 March 1887, Graz, d. 21 September 1977, Innsbruck) was an Austrian Orientalist. From 1907 G. studied Semitic philology and Egyptology at the University of Vienna, where he received his doctorate in 1911 with a dissertation on the visions of the Coptic monk and theologian ↗Schenute of Atripe (published later in an enlarged version; Grohmann 1913). Between 1923–45, he held a chair in Semitic philology at the German University in Prague, between 1949–56 a professorship in Ancillary sciences to Islamic history at Cairo University, and after 1956, an honorary professorship at the University of Innsbruck.

G.'s important contributions to ↗Ethiopian studies from his earlier years were a study on Ethiopian script (1918) and a voluminous compendium of Ethiopic religious poetry (including ↗*Maḫletä ṣəge*, ↗*Akkonu bəᵓəsi* and ↗*Anqäṣä bərhan*) with philological commentaries and detailed explanations which are a mine of useful information for the interpretation of other works of Ethiopian literature (1919). G. also worked on Sabaic cultural history and during his later years on Arabic papyri and palaeography where, beside publications of texts and inscriptions, two works stand out (1954; 1969–71).

Walter W. Müller

Grottanelli, Vinigi Lorenzo

G. (b. 13 August 1912, Avigliana, Turin, d. 30 May 1993, Rome) was an Italian anthropologist. G. graduated in 1933 and 1935 in Economics and Law respectively from the University of Turin. For his B.A. thesis in economic geography, prepared under the supervision of the geographer Pietro Gribaudi, he carried out field work in Somalia studying the conflicts concerning indigenous labour in the lower ↗Wabi Šäbälle area. Later, G. lectured in Rome, where he came into contact with the prestigious Scuola di Studi Orientali and attended seminars on Amharic and Gəᶜəz by Carlo ↗Conti Rossini and on non-Semitic languages of East Africa by Martino Mario ↗Moreno. He became a close friend of the historian of religions Raffaele Pettazzoni, founder of the Istituto di Civiltà Primitive, the later Istituto di Etnologia, of which G. himself was to become director. After World War II, he completed his education in ethnology in London.

In the context of the colonial conquest of Ethiopia, in 1937 G. joined the interdisciplinary team funded by the Centro Studi per l'Africa Orientale Italiana (and directed by Giotto ↗Dainelli) with the purpose of studying the Lake ↗Ṭana region. As the member responsible of the anthropological-geographical section, G. studied both local markets, applying conceptual categories of the marginalist school of economic thought, and indigenous dwellings, using the surveying methodology of the Italian geographical school – i.e., chiefly, anthropometry, yet balanced by a strong sense of history. Parallel to the main mission, he conducted research in the western lowlands amongst the ↗Kunama, and, in 1939, amongst the ↗Mao (s. Grottanelli 1940) and ↗Koman of western Wälläga. Later, between 1951–52, he carried out field work in Somalia among the Wabajuni fishermen, the Kismaayu and the Lamu. It was then that he elaborated the category of "pre-Nilotes", clearly bred into a rigid form of historical diffusionism and much contested by contemporary scholars (Grottanelli 1955).

In 1942, G. was appointed Professor of Ethnology at the University of Rome and Superintendent of Antiquities and Fine Arts. For the following 25 years, he was in charge of the study and preservation of the ethnographic collections of the National Museum Luigi Pigorini. Among his numerous scientific involvements, between 1946–68 he was member of the Executive Council of the International African Institute and the international scientific commission set up by UNESCO for the preparation of a General History of Africa. He also taught at the ↗Istituto Universitario Orientale in Naples and the Pontificia Universitas Urbaniana in Rome.

G. placed himself at the intersection of different ethno-historical traditions, being specially influenced by the German and Austrian historical-cultural schools, dominant in Italy during the 1920s–30s (Wilhelm Schmidt) and the historical-philological tradition of Conti Rossini, ↗Cerulli and Moreno. He came also into contact with the historical-geographical school led by Renato Biasutti, the physical anthropology and palaeontology practiced by the Florentine school of Mochi and Biasutti himself and the historical-religious approach of Pettazzoni. G. collaborated in the editorial team of the ↗*Rassegna di Studi Etiopici*, the journal *Africa* (Roma, starting with the 3rd year of publication) and the encyclopaedia *Razze e popoli della Terra* (2nd ed., 1953–57), directed by Biasutti. He also directed the collective work *Ethnologica*, to which he contributed important sections.

G.'s research was primarily focused on material culture, religious and artistic life and the various migrations and mixing processes that shaped the rich ethnic landscape in the Horn of Africa (whereas it also extended to such distant subjects as West Africa or Oceania). He was interested in understanding the way a social structure came into being and generated its own cultural features. More oriented towards fieldwork than theoretical reflection, in 1954 G. returned to Africa with the Missione Etnologica Italiana in Ghana, which he directed until 1975, studying the Nzema of western Ghana.

Gianni Dore

Grühl, Max

G. (b. 1884, Pinneberg, d. 1941) was a German ethnographer and author who organized several ↗expeditions to southern Ethiopia. G. was originally a teacher at a commercial school and had an Egyptological background, which inspired his theory that remnants of the ancient Pharaonic culture are to be found in Ethiopia, especially in Käfa. In 1925–26 and 1928–29 he led two – mainly self-funded – expeditions to areas between the ↗Abbay and Lake Rudolph (today ↗Turkana), where he carried out ethnographic research (Deutsche Nil-, Rudolfsee- und Kaffa-Expedition; Deutsche Äthiopien-Expedition). His son Waldemar, then a secondary school student, accompanied him in 1925 and kept a diary of this adventurous journey, which was published in 1929.

G.'s interest in the improvement of trade relations between Ethiopia and Germany accompanied his scholarly research. He was involved in the ambitious Lake ↗Ṭana project, the British plan to built a dam in the lake in order to regulate the water-flow to the Nile. In the mid-1920s he discussed German involvement with *ras* Täfäri Mäkʷännən and other officials and was commissioned by German industrialists to study the feasibility of the project. German banks finally agreed to raise capital for a concession, but the necessary collaboration with the British was never achieved (Bairu Tafla 1981:140f.). An outcome of G.'s second expedition was the discovery in Moǧo of the "Mojo fever" by his travel companion, the Russian physician Gavriloff of Addis Abäba.

His recordings of Ethiopian music are still kept in the Ethnological Museum Berlin. G.'s books and film sequences (e.g., from a visit to the governor of western border areas *šayḫ* ↗Ḫʷağalī) contain a wealth of data and impressions on Ethiopian personalities and peoples before the Italian invasion. His account of the journey to ↗Käfa (Grühl 1932; 1938) is especially important due to the scarcity of sources on this region. It contains numerous data on oral history, including translations of oral traditions and on administration and social order.

G.'s influence on the formation of a positive image of "Abyssinia" in Germany, also during the Third Reich period, was considerable. A writer especially popular among the youth for his adventurous travel accounts, the political events of the mid-1930s gave him the opportunity to publish a number of books, while public interest was high. Several of them were rapidly translated into English and Italian. His reports combine the "tourist" quest for adventure and exotic peoples and scholarly curiosity. His commercial partner, Major Hans Steffen, a weapons trader in the Near East, in 1927 established connections with the Ethiopian leadership and then became the Ethiopian Consul at Berlin, acting from 1928 to 1936 (Zitelmann 1999:136). In missionary history G. also plays a role; when he returned from Ethiopia in 1926, he appealed for the re-opening of the Protestant mission. The appeal was received in a moment of re-orientation, was interpreted by missionary circles as a sign of God and quickly led to the establishment of the ↗Hermannsburger Mission in Wälläga in 1927 (Bauerochse 2000:586).

Guba

Abba G. (ጉባ, also Gubba, ጕባ Gʷəbba) was one of the ↗Nine Saints likely to have arrived in Ethiopia in the late 5th/early 6th cent. from the eastern provinces of the ↗Byzantine empire. Most obscure among them, G. is only mentioned in a few hagiographic sources (e.g., the *Gädlä* ↗*Ṗänṭälewon*, ed. Conti Rossini 1904: 44); his own Acts have not been found yet. A Homily by "Julian [Luləyanos], bishop of Aksum", in which ↗Yəmʾata and G. are praised, is transmitted in ms. EMML 1763 from ↗Däbrä Ḥayq Ǝsṭifanos, dating between 1336 and 1340 (Getatchew Haile 1985:389), as well as in the almost contemporary ms. EMML 8509 from ↗Ṭana Qirqos (Fiaccadori 1989:150 and n. 3], 161f., ill.). The "standard" version of G.'s story has it that he came from Cilicia (Qəlqəya: whence his purported "Syrian connection", s. ↗Syriac influences) and stayed for a while with *abba* Ṗänṭälewon at Aksum. Then he went to ↗Mädära, the same place as ↗Gärima, and settled within a "three-day walk" from the latter (Guidi 1894:63). The ↗*Sənkəssar* commemorates G. together with Afṣe and Yəsḥaq (Gärima), who all are "of the assembly [*əngəlga*] of the Nine Saints", on 29 *Gənbot* (ColSyn XIII, 346f.). According to a most rare variant in a *Sənkəssar* ms. (from ↗Däbrä Bizän) already in the possession Giuseppe ↗Sapeto, G. "went out into the desert of Baraka [↗Barka], and no one knows about his life or his tomb" (Sapeto 1857:410; cp. Dillmann 1880:25 and n. 4).

Though G. surely belonged to the number of the Nine Saints, and is depicted as one of them in both murals (e.g., in the famous Yəmʾata church of Gʷəḥ, s. Gerster 1972, fig. 188) and illuminations, there seems to be no monastic foundation claiming its origins from him; G.'s mission apparently "died out" (SerHist 118). This may explain why the Jesuit Pedro ↗Paez (BecRASO II, 517) believed that G. was a name later given to "Abbâ Oz" (↗ᶜOṣ, sometimes included among the Nine Saints).

Gubaʾe

G. (ጉባኤ) is a historical town in ↗Ǝnfraz, a region that attracted royal attention from the second half of the 16th cent. There, in 1561, *aṣe* ↗Minas chose to spend the rainy season (Kropp 1988:59) and, in 1571, *aṣe* ↗Śärṣä Dəngəl met the governors of Bägemdər and Təgray. It is only in 1578, however, that G. really becomes the centre of the government of the Ethiopian empire and the ordinary residence of the emperor, until ca. 1589, when it was replaced with ↗Ayba, further north. At G., Śärṣä Dəngəl had a palace "of nice construction" (CRHist 50, 63, 95, 127, 133, 156). Afterwards, apart from a visit of ↗Susənyos in 1607, the site does not appear anymore in the sources, at least under that name. The "short chronicles" of the 18th cent. draw a parallel between G. and Dobit, Dokit or Däbet (BassÉt 117; Perruchon 1896:179, 214), where Fasilädäs spent the rainy season in 1633–34 (BassÉt 133; Perruchon 1897:361f.; 1898:84).

Antoine d'↗Abbadie located the ruins of a castle at a place called Guzara near the Dabed river (d'Abbadie 1873, map 4; cp. EMA map no. 1237 D3, with Guzara and an area called "Gubay" situated 5 to 10km to the south and the river "Dobito" between), on account of which Annequin (1965: 22–25) and Pankhurst (in PICES 5b, 415–20; PankHist I, 94–100) have surmised that the sites of G., Guzara and Dobit are one and the same. In this case, the ruined castle of Guzara could be the palace of Śärṣä Dəngəl and thus the oldest example of the ↗Gondär-style architecture, more than 50 years prior to the erection of the ↗Gondär castles (s. also Merid Wolde Aregay 1984:135f.). Yet, in the absence of either a precise survey of this area or excavations at Guzara, the question cannot find a definitive answer; all the more so, as the sources of the first half of the 17th cent. clearly distinguish between the city of *aṣe* Śärṣä Dəngəl and the seat of an audience by *aṣe* Susənyos in 1607 (PerChron II, 74ff.), G. or "Old G." according to the Jesuits (d'Almeida in BecRASO VI, 155f.), on the one hand, and the cities of *aṣe* ↗Yaᶜəqob, Dobit (PerChron II, 121) and Qoga (PerChron II, 87, 101) or the "New G." (Paez in BecRASO II, 203f.) on the other.

Claire Bosc-Tiessé

Gubaʾe qana

G.q. (**ጉባኤ፡ ቃና**) is one of the traditional forms of ↗*qəne* poetry. G.q. hymns are improvised during the celebration of the Liturgy of the Hours. As with all *qəne*, G.q. hymns are **እንግዳ፡ ድርሰት** (*əngəda dərsät*, lit. 'guest-composition') and unique, being performed only once and never repeated.

This type of *qəne*, with double **ቤት** (*bet*, 'verse'), is known by its shortness and simplicity. It is performed at the celebration of the ↗*Səbḥatä nägh* (Matins or Lauds) on Wednesdays and Fridays and ↗Lent. It is sung in the ↗*gəʿəz* or ↗*ʿəzəl* mode (Täsfa Gäbrä Śəllase 1979 A.M.:31; HabUff 216) after the psalms ↗*zäʾamlakəyä* (lit. 'of my God'), named after the beginning of Ps 62/63 (also Ps 64/65 and Ps 91/92:5, s. Yəḫeyyəs Wärqe 1960 A.M.:20). On Mondays, Tuesdays, Thursdays and Sundays, the G.q. is replaced by the three *bet* of *qəne*-type *zäʾamlakyä*, sung after the psalms *zäʾamlakəyä*.

The G.q. may have references to Christ's suffering on the Cross: **ስለ፡ ተዘክሮተ፡ መስቀል** (*səlä täzäkkərotä mäsqäl*, 'on the memory of the Cross'). It is sung in the *gəʿəz* mode also during the celebration of the Sunday office (↗*Mäwäddəs*) after Ps 5, 41/42, 47/48, when the *Dəggʷa* element ↗*arbaʿət* does not contain the repetition of the closing part of the *arbaʿət* executed on the same melody (the so-called *məlṭan*, or *həyäntä qəne*; Admasu Ǧämbäre 1963 A.M.: 19; Yəḫeyəs Wärqe 1960 A.M.:14, 16).

As to the meaning of the term G.q., scholars offer divergent interpretations. *Gubaʾe* is 'assembly' and *qana* may be understood as *Qan*[*n*]*a zägälila* (**ቃና፡ ዘገሊላ**, 'Cana of Galilee'; Jn 2). According to one explanation, it refers to the name of the feast (the Wedding at Cana), for which this kind of poem was first composed by *aṣe* ↗Bäʾədä Maryam I. Other interpreters maintain that just as Jesus was surrounded by his disciples at the wedding at Cana, so do *qəne* students gather around their teachers, improvising this kind of *qəne*; both the verb **ቀነየ** (*qännäyä*, 'to give intonation, to compose, or to sing an hymn or a poem') and the term *qəne* derive from the name of this biblical place. Still other *liqawənt* prefer to trace the origin of G.q. to Qana, a small village in Šäwa, where ↗*däbtära* would have gathered to discuss *qəne*.

When a student begins to learn and compose *qəne* and modulate his voice (yet another meaning of the verb *qännäyä*) accordingly, it is G.q. that he is concerned with (Admasu Ǧämbäre 1963 A.M.: 18). Thus, the mastery of G.q. stands at the beginning of the career of the future *däbtära*.

Habtemichael Kidane

Gubala

G. (ጉባላ, also called Qerəllos; b. ca. 1696, d. after 1726), was the son and successor of ↗Maḫdärä Krəstos, a pretender from ↗Lasta, who challenged *aṣe* ↗Yohannəs I. G.'s main centre of activity was the mountain stronghold of ↗Ǝmäkina, in eastern Bugna, Lasta. Like his father before him, G. had taken the title of ↗*nəguś* and had established alliances in his rebellion against *aṣe* ↗Bäkaffa. In 1725 Bäkaffa led a campaign into Lasta and devastated the region, but his commanders were unable to proceed to Ǝmäkina.

Aṣe Bäkaffa made another expedition into Lasta in 1726 and eastern Bugna suffered major destruction. Unable to resist the larger imperial forces and because of the destruction of the region, G. sued for peace after 30 years of struggle, which indicates that his rebellion had started before the reign of Bäkaffa. Later in the same year, G. travelled to Gondär with his son and formally submitted to the Emperor. The court was satisfied with the submission of Lasta and G. and his son were sent back to their area with honours.

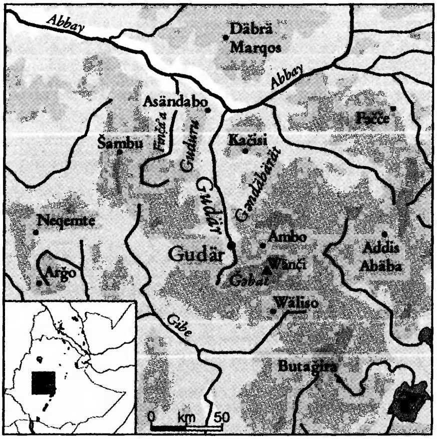
Wudu Tafete

Gudär

The G. (ጉደር) river is a left-bank tributary of the ↗Abbay. The G. has its sources on the slopes around Mount ↗Ǧəbat, more than 3,000 m A.S.L. south-west of Ambo. It flows into the Abbay at an altitude below 1,000 m A.S.L. after running more than 150 km. Its upper course winds through the Šänän high basin, which is flooded during the rainy season. It runs south-north and is bordered by two recently active volcanoes, Mount Tokke to the north and Mount Wänči to the south. Their lava has cut the river, resulting in several falls, up and downstream of the city of G. (2,085 m A.S.L.). After collecting the waters from the slopes of Wänči and the Ambo-Gudär depression, the G. flows northwards through narrow gorges into the Wadessa plateaux. This very deep cut follows a graben covered upstream with recent lacustrine sedimentary deposits (Holocene), with travertine and basalt. Dominated by the ↗Guduru plateaux to the west and by those of Gəndäbärät to the east, the G. canyon joins the Abbay near the Mälka Furi ford.



Caravans, obstructed by the narrowness of these gorges and the endemic malaria, used to travel across the highlands, in the west through Asändabo or via Kačisi in the east. The lower course of the G. is not a way of passage between Goǧǧam, in the north, and Meč̣č̣a, in the south. Despite of its steep descent, the flow of the G. is too modest to allow the installation of a hydroelectric power-plant, which was instead built on the Finčaʾa river, at the edge of the Guduru plateau. In the final years of the *Därg*, the North Korean aid built an ammunition factory in the vicinity of G. that was closed in 1991.

Guddifačaa

G. (also *guddifadda*) is an ↗Oromo term which means 'foster or adoptive parents' and, by extension, those who have reared and are responsible for a person or persons. It is sometimes used reciprocally. The verb *guddisa-ifta* is used to mean 'to make bigger, bring up, make prosper, rear children' (Leus 1995:370). An individual may be adopted or fostered at any age. The word may be generalized and used to express the economic and political relationship between a dominant Oromo group and a group of non-Oromo who have been or are being incorporated and assimilated. The meaning of G. is very close to that of ↗*Moassa*.

Paul T.W. Baxter

Guddinaa Tumsaa

G.T. (also Gudina Tumsa, b. 1929, Boǧǧi, Wälläga, d. 28 July 1979, Addis Abäba) was a prominent Oromo evangelist and patriot. He was born into a family of heterogeneous religious filiation – his father was Protestant, his mother was Ethiopian Orthodox, his brother a ↗*qaallu*. After the Liberation, G.T. went to primary school at Boǧǧi. He completed the first four grades in two years, an early indication of his abilities. He also attended evangelical services. Around 1946 he worked in the compound of the Swedish missionary Manfred Lundgren at ↗Näǧǧo in order to pay his fees during 5th and 6th grades. He then went to Neqemte, where he completed his schooling and trained to be a nurse.

After the parents' death, G.T. and his brothers moved to Neqemte where he started work as a dresser in the hospital of the ↗Swedish Evangelical Mission, during which time he married Ṣäḥay Tolassa (Saeveras 1993:35f.). From 1955 to 1958, he received theological training at Näǧǧo and Neqemte and was ordained priest by the Rev. Stjärne on 20 April 1958, together with six other candidates (Bakke 1987:153). He served as pastor in Neqemte until 1961, then in Kambaata until 1963. The ↗Ethiopian Evangelical Church Mekane Iyesus (EECMY), realising his extraordinary abilities, sent him for further theological training to the United States, where he received his Bachelor of Divinity (B.D.).

On his return in 1966, G.T. was appointed Executive Secretary of the EECMY. Besides office work and preparation of documents on theological and social issues (s. Aster Lensa – Paul Hoffman 2003), his concern was the holistic presentation of the Gospel to city dwellers. He was co-founder and the first chairman of the Council of Lutheran Congregations in Addis Abäba and became president of the Addis Abäba Synod, formed in 1974.

G.T. also became increasingly involved in the emerging Oromo political movements. His distinguished appearance and physical magnetism, combined with his rhetorical skills and charismatic qualities, made him a natural leader. In 1978 he refused to join a government-organised tour to Europe which had been designed to show that there was religious freedom in Ethiopia (Eide 2000:176). He was arrested, then released but kept under close surveillance, and then, on 28 July 1979, snatched off the street and brutally murdered that same night by the revolutionary *Därg* regime (Saeveras 1993:89–92). The killing took place just a few hours after that of Patriarch ↗Tewoflos. G.T. is honoured for his faith by members of his church and as a brave and resolute patriot by Oromo of all faiths.

Johannes Launhardt

Gudela

The songs in honour of *aṣe* ↗ʿAmdä Ṣəyon I report a victory against the ↗Hadiyya as far as Gʷədela (ጕዴላ; Littmann 1914:27). It can thus be assumed that Gʷədela or G. (ጕዴላ) was a locality or group situated in the furthest southern part of the Muslim-dominated state Hadiyya. A complete subjugation of these areas does not seem to have been realized, although they became tributary to the Christian empire. When the Hadiyya leader Mahiko waged war against *aṣe* ↗Zärʾa Yaʿəqob, the *gärad*, chief of G., joined the alliance of the rebels and was defeated by the Emperor (PerrZarY 16–23).

Until the 1980s G. was used by other groups as a pejorative name for all the Hadiyya and their language. The historical continuity of the G. of the above-mentioned literary sources and parts of the present Hadiyya appears obvious. From the oral traditions it can be concluded that the subgroups Wiitto-Giira and Leemo originating from Dallo in Bale and Sidamo, respectively, are genealogically linked with G. They largely joined the *ǧihād* armies of ↗Aḥmad b. Ibrāhīm al-Ġāzī in the 1530s and, following long migrations, finally settled in their present domiciles between the rivers Bilate and Omo.

According to a popular legend, the name G. was derived from the Amharic exclamation ጉድ (*gudd*, 'astonishing, shocking'), when other peoples witnessed the Hadiyya custom of taking the genital organs of slain enemies as trophies. Since times immemorial G. has no longer been employed as an ethnonym by any Hadiyya subgroup and it is totally rejected as an insulting term.

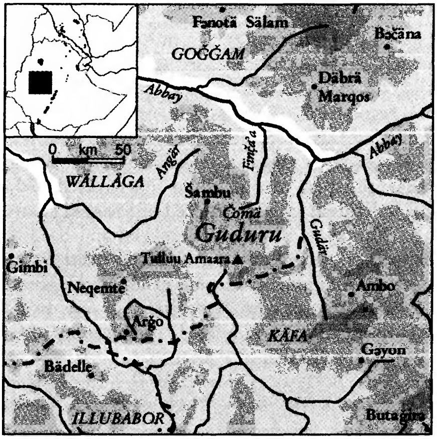
Gudit ↗Ǝsato

Guduru

The highlands of G. (ጉዱሩ, also Gudru) in eastern ↗Wälläga (Oromiyaa *kəlləl*) are limited by the ↗Abbay canyon to the north, the Angär valley to the west, Tulluu Amaara mountain (3,146 m A.S.L.) to the south and the ↗Gudär valley to the east. In 1972 the swamps of Çomä in the centre of the plateau disappeared under the waters of the ↗Finčaʾa hydroelectric power station, using the energy of a reservoir. At the bottom of the dam an irrigated sugar-cane plantation was developed and a sugar factory was inaugurated in May 2000. The densely populated (50 inhabitants per km²) plateau (ca. 2,200–2,300 m A.S.L.) is planted with barley and nug, while scattered hamlets are surrounded by *ənsät* gardens. It has a way out to the east along the new Finčaʾa-Gedo road, while ↗Šambu (15,223 inhabitants) remains isolated.



The name G. comes from the Guduru Oromo, a fraction of the ↗Mäčča, visited and described by d'Abbadie (AbbGeogr). Their chief at the time, *mooti* ↗Gama Moras, who was allied to the rulers of Goǧǧam, welcomed Guglielmo ↗Massaja's mission in Asändabo. Defeated by *ras* ↗Gobäna Dači in Əmbabo on the banks of the Çomän swamps in 1882, *ras* ↗Täklä Haymanot of Goǧǧam had to abandon the G. region and the whole of Wälläga, as well as the kingdoms of ↗Gibe to Mənilək's Šäwans. Their custom of raising tall votive masts described by the d'Abbadie brothers is still practised.

From 1944 to 1987 the Horo Guduru *awraǧǧa* covered all the northern part of the Wälläga *kəflä hagär*. Its capital was Šambu (8,252 inhabitants in 1984; 18,436 inhabitants in 2004). The population of this large subdivision (17,400 km²) was 222,300 inhabitants (density: 12.7 inhabitants/km²) according to the 1970 census. It had more than doubled by the census of 1984, which listed 457,406 inhabitants (density: 26.2 inhabitants/km²). In 2004, the G. *wäräda* (only 2,397.5 km²), a part of East Wälläga zone, had 143,646 inhabitants, which corresponds to a density of 60 inhabitants per km².

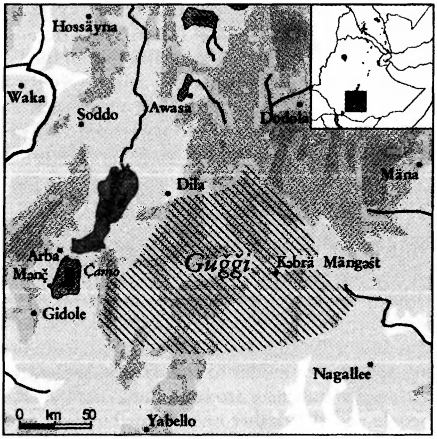
Guǧǧi

The G. are a branch of the ↗Oromo. Most of the G. live in today's Boorana Zone of Oromiyaa Region and number around a million people. They are sometimes referred to by their neighbours, but not by themselves, as ↗Ǧämǧäm or Ǧämǧämtu. Their country varies greatly from mountainous ridges nearly 3,000 m A.S.L. to hot low ↗grasslands; the main crops in the highlands are barley and pulses and in the valleys maize and *ṭef*. Wherever it is possible, each homestead cultivates a plot of *ənsät*. Cultivation supplies basic subsistence, but access to grazing is important because stock, as well as providers of milk and meat, are essential for sacrifice and as sources of social respect.

A style of indirect rule was instituted in the 1890's when the G. were conquered by the forces of *aṣe* ↗Mənilək II. The sacred great ↗*qaallu*, who was also recognized by the neighbouring ↗Diraašša and the ↗Gidiččo (VSAe II, 301ff.), was incorporated into the state as a simple lay headman. His position was compromised, but he continues to be a unique source of blessing and "the person who legitimises the *abbaa gadaa* when they take office" (Hinnant 1978:207f., 238). The ↗*abbaa gadaa* were deprived of any political authority, but their influence, though diminished, was not entirely destroyed. The three ↗*gadaa* systems themselves, which appear to have been similar to that of the Boorana, were interrupted for a period and their complex timetabling was disrupted, but, despite everything, *gadaa* has persisted "as an enormous outpouring of ritual" (Hinnant 1978:207). Accounts of the complex rituals, prayers, obligations and time-sequencing of *gadaa*, and of the organizational changes which have taken place, can be found in Haberland (VSAe II, 308–21, 380–99), Hinnant (1977, passim; 1978, passim) and van de Loo (1991: 23–68). Around the same time the ↗Sidaama began a process, which continues, of infiltrating and taking over G. territory in the north: the G. have compensated by expanding to the south at the expense of the Boorana. Their neighbours perceive the G. to be warlike, as they do themselves in their own *gadaa* rituals (Hinnant 1977:10), but internally they are an extremely "orderly working community" (van de Loo 1991:16). There are local variations in culture, but the G. share common social and religious values, though these are being challenged currently by both Islam and the Pentecostal movement (van de Loo 1991:269).

This article centres on the southern G., on whom we have recent data, but Haberland (VSAe II, 272–343) gives a full account of the northern G., or Alabdu. The southern G. consist of three independent "tribes", ↗*gosa*, known as the Uraga, Mati and Hoku, each of which has its own territory that takes its name, and its own *gadaa* system with its own *abbaa gadaa*. Each territory is the homeland of a complex of patrilineal, exogamous, non-totemic clans (*balbala*, 'doorway'). Each clan is divided into named "houses" (*mana*) which, in turn, are divided into numerous patrilineages. Every G. also belongs to one of the moieties, named Akaku and Dalata, membership of which is determined by "house", so that members of the same clan may belong to opposite moieties. This attenuated version of a moiety system inclines Asmarom Legesse (2000: 183) not to include the G. among those Oromo who have a form of dual organization.

Until villagization in 1986, the G. "lived in small family units scattered across the hills"



Guǧǧi (Alabdu) youngsters running to a dance feast; photo 1954/56 by Eike Haberland, courtesy of the Frobenius Institut, Frankfurt am Main (27–Ha100–09)

which formed "neighbourhoods *(ola)*", consisting of "lineage mates, fellow clansmen and friends", and were separated by pasture and crop-lands (van de Loo 1991:15f.; Hinnant 1978: 208). For the G., both as a people and as individuals, "abundance or deprivation" in daily life depends on following the laws (↗*seera*) of God ↗*Waaqa*. Destiny or providence (*kayyo*) and virility (*kallača*), "the two basic concepts of G., ideology [...], were created by God" (Bernardi 1985:87). It is a constant duty and responsibility for all successful "men in their prime", who combine "seniority and great relative worth with the strength and virility of mature physical prowess", to work for the maintenance of peace (↗*nagaa*) through reconciliation (*araars a*): firstly between neighbours and then, by extension, between neighbourhoods and between *gossa*. For the G., internal peace and religious performance are interdependent (Hinnant 1978: 210–13). The "perpetually unfolding" cycle of *gadaa* ceremonies, "which makes sense of, and humanises the universe" is a major part of the G. complex of religious belief and action (Hinnant 1978:238). These ceremonies remain "the most powerful means cyclically to renew peaceful interregional contacts and the exchange of knowledge, blessing and sacred power across both clan and regional boundaries" (van de Loo 1991:25).

Villagization caused devastating poverty, heavy stock losses, deforestation, overgrazing; it "created tensions and conflicts between individuals and families, increased alcohol consumption, adultery, and other social crimes like theft" (Taddesse Berisso 2002:132). The G. are striving to restore the old and proven modes of subsistence, settlement and *nagaa*, but there are continuing costs for the people and the timber needed for building new houses on the old sites is enforcing further deforestation and ecological degradation.

Gugs

G. (**ጉግስ**) is the Amharic name for mock cavalry warfare, played partly for amusement, and partly as training for real fighting. This game was, and still is, often played during rural marriage celebrations, as well as at major Christian religious festivals, notably ↗*Mäsqäl* and ↗*Ṭəmqät*. G. was traditionally loosely organized and therefore subject to considerable variations of play – with donkeys reportedly being very occasionally substituted for horses.

The game usually starts with the horsemen of a village dividing themselves into two roughly equal groups, who then disport themselves on an open field. Each player will normally have three wands, corresponding to the three spears carried in real warfare, and will endeavour to hit one or more of his opponents on the head or body. The players will also have round shields with which to ward off such attacks and may twist round and endeavour with their own wands to strike those of their assailants. As the tide of battle changes, the horsemen will advance and retreat. When advancing they will urge their horses forwards with their thigh and instep, but, when retreating, will gallop away without touching their bodies. Fallen wands will be collected by servants and restored to the various players. In some variants of the game, horsemen are said to capture unfortunate players by surrounding them with their spears: a player who surrenders is expected to join the victorious party. Though never, of course, as dangerous as actual fighting, accidents do sometimes occur. A player or a horse may thus be wounded by the point of a wand, or a horseman may fall off his steed. At the end of the game the players will often entrust their horses to a servant to drape and lead home, while they themselves may return on mule-back, as at the end of a real engagement.

Gugsa Arʾaya

Ləʿul ras G.A. (ጉግሳ፡ አርአያ; b. 1882, d. 26 April 1933, Mäq̣älä) was a Təgrean noble. A son of *ras* ↗Arʾaya Śəllase Yoḥannəs, G.A. contended with the other surviving grandson of *aṣe* ↗Yoḥannəs IV, ↗Śəyyum Mängäša, for the province's governorship. In 1903 they co-operated in leading a short-lived local revolt against *aṣe* ↗Mənilək II's men, but following its failure their ways parted.

After Mənilək's death, *däǧǧazmač* Śəyyum gambled on *ləǧ* ↗Iyasu's victory in his struggle with the Šäwan elite, and was rewarded with the title of *ras* in May 1914. G.A. joined the opposite camp, that of Täfäri Mäkʷännən's (future ↗Ḫaylä Śəllase I), and in February 1918 was appointed *ras* by the victorious Šäwan elite. He proved himself loyal to Täfäri: married Täfäri's niece Yäšašwärq, captured Iyasu in 1921, and continually frustrated Italian attempts to infiltrate into Təgray.

In 1928, G.A. was appointed governor of eastern Təgray (Ǝndärta and ʿAgamä) with Mäq̣älä as his capital. At the same time, though Täfäri Mäkʷännən did not fully trust Śəyyum, he appointed him over western Təgray. In 1930 G.A. supported Täfäri in his crucial clash with *ras* ↗Gugsa Wäle.

In April 1930, however, Täfäri summoned the two rivals to Addis Abäba for his coronation as *aṣe* Ḫaylä Śəllase I. During the coronation ceremonies in November 1930, G.A. was promoted to the title of *ləʿul ras*. While the two were forced to remain in the capital, the Emperor appointed his own men over important areas in Təgray, thus depriving G.A. of his control of Aksum. G.A. was only allowed to return in November 1931. By this time he resented the Emperor and began sharing his frustration with the Italians. His resentment grew further in May 1932, when the Emperor married his son, crown prince ↗Asfa Wäsän Ḫaylä Śəllase, to Śəyyum's daughter, Wälättä Ǝsraʾel. G.A. complained and was appeased on 16 June 1932 when the Emperor married one of G.A's sons, *däǧǧazmač* ↗Ḫaylä Śəllase Gugsa, to his younger daughter, Zännäbä Wärq, but G.A. was still bitter at not being trusted with control over all Təgray.

Gugsa Arʾaya; from Frangipani 1936:64

G.A.'s failing health led to his dependency on the Italian doctors who were sent to Mäqälä in 1932. Italians hoped for G.A.'s full support in an open conflict in Ethiopia. However, they could never test this assumption as G.A. died of pneumonia shortly after.

Gugsa Darge

Ləǧ G.D. (ጉግሳ፡ ዳርጌ; b. ca.1867?, d. 1922, Massawa) was an Ethiopian noble. G.D., probably the fourth and last child of *ras* ↗Darge Śahlä Śəllaśe, uncle of *aṣe* ↗Mənilək II, was in a better position to lay claim to the crown than his cousin, as Mənilək had no male inheritors. Due to his intelligence and friendship with the Italians who frequented the court – notably with ↗Leopoldo Traversi – he was sent for studies to French Switzerland in 1894, together with ↗Afäwärq Gäbrä Iyyäsus and Qəṭaw Zämanuʾel.

In December 1895 G.D. was the main figure in the so-called "kidnapping of the Abyssinian princes", a term with which the contemporary press described the passage of the three young people to Italy. This most probably was done following Italian suggestions, Italy seeing in G.D. a "*nəguś* in reserve". During the ↗ᶜAdwa campaign he went to Eritrea together with his two companions. He sojourned once in the camp of general ↗Baratieri, but as the Italians largely ignored him he was sent back. In 1914 A.M. [1921/22 A.D.], suffering from a disease, he expressed his wish of going back to Ethiopia. He died at ↗Massawa hospital in 1922. In 1927, his corpse was brought to ↗Šäwa and buried in the monastery of ↗Däbrä Libanos.

Alain Rouaud

Gugsa Märsa

Ras G.M. (ጉግሳ፡ መርሳ, or Gʷəgśa Märsa; d. 1825) was a chief of the ↗Yäǧǧu and a major ruler during the ↗*Zämänä mäsafənt*. Grandson of the founder of the Wärräsek dynasty ↗Gʷangul (son of Gʷangul's daughter Käfäy and her husband Märso Barento "Abba Gätəyye"), G.M., who became widely known as "Gugsa the Great", first came to prominence in wars to control the heritage of the ↗Gondärine kingdom in the late 1780s and 1790s.

G.M. started his political career when the ("anti-Galla") party of Lasta, composed of *ras* ↗ᶜAśrat and his brother *ras* ↗Wäldä Gabrəʾel, defeated G.M.'s uncle *ras* ↗Aligaz and briefly prevailed over Gondär and ↗Bägemdər. G.M. had split from Aligaz even before the latter's fall (GueCopMen 200): he turned to Amäde (Kolase) of ↗Wärrä Himano who was ruling over Mäqdäla, and later switched to *ras* Wäldä Gabrəʾel, who appointed him governor of ↗Fogära. When *ras* ᶜAśrat, his ally *ras* ↗Märəd Ḫaylu of Goǧǧam and Wäldä Gabrəʾel died fighting each other (in July 1799, according to Rüppel 1938, vol. 2, 385–88; GueCopMen 200f.), G. he took over the ↗*alga* of Aligaz and, with the help of Alula (his son or, most probably, his brother), occupied a prominent position in Bägemdər. In 1802, he became *ras*. Shortly after his rise to power, he established his capital at ↗Däbrä Tabor, which was also used as the capital by his successors until 1853, and later by TewodrosII. There he founded the church of ↗Däbrä Tabor Iyäsus, one of the major foundation of the period; on his death, he was buried in a tomb in its churchyard.

During the ca. 25 years of his rule, in which his principal rival was *ras* ↗Wäldä Śəllase of Təgray, G.M. acted above all as a king-maker, *aṣe* ↗Dəmetros, ↗Ǝgʷalä Ṣəyon (whom G.M. married to his sister Wälättä Iyäsus), ↗Iyoʾas II and ↗Gigar all occupying the Solomonic throne under his aegis. Combining political and military means, G. extended his control over the largest part of the then Ethiopia, ruling Bägemdər, ↗Goǧǧam, ↗Wällo, and, possibly, to some extent even ↗Təgray (BTafA 438f.; MorTeod 148; cp. Shiferaw Bekele 1990:30f.); a number of local rulers became related to him through marital links.

A Muslim who soon converted to Christianity, G.M. was also a partisan in conflicts over Christian theology, promoting, through exile of dissenters, the teaching of the ↗*Sost lədät*, as opposed to the more conservative ↗*Karra* teaching favoured by *abunä* ↗Yosab and his successor, *abunä* ↗Qerəllos. On the death of Yosab in 1803, G.M. plundered the bishop's property and, due to doctrinal divergences, exiled Qerəllos. G.M. is also famous for having issued an intriguing edict on ↗*gʷəlt* (transmitted in AbbSéjour vol. 1, 150–54) in an attempt to acquire control over all available fiefs (s. Conti Rossini 1921); it is thought by some to have had a serious impact on the ↗land tenure system (s. PankEcon 137f.).

G.M. had two wives, Wälättä Fəqər and Amätä Śəllase, both daughters of *aṣe* ↗Täklä Giyorgis I. On his death, G.M was succeded by his son ↗Yəmam, who was in 1828 followed by another son, ↗Marəyye and three years later, for three months, by ↗Dori Gugsa. G.M.'s daughter Ḫirut was married to *ras* ↗Ḫaylä Maryam Gäbre (and their daughter Yäwəbdar later to *däǧǧazmač* ↗Säbagadis Wäldu of Təgray), his other daughter Tərəngo to *wagšum* ↗Kənfu, Wälättä Täkle to *däǧǧazmač* ↗Maru of Dämbəya, Aster to Wäldä Rufaʾel of Mäč̣č̣a (GueCopMen 202). The struggle for power in the central provinces triggered by G.M.'s death was not resolved until the accession to power of ↗Ali Alula (son of Alula, who had been poisoned in 1822, and ↗Mänän Libän, Amäde's granddaughter) in 1831.

Donald Crummey – Red.

Gugsa Wäle

Ras G.W. (ጉግሳ፡ ወሌ; b. ca. 1877, Märṭo, Yäǧǧu, d. 31 March 1930, Ančəm, Wadla) was a leading notable of the Mənilək-Zäwditu era. He was named after his great great grandfather ↗Gugsa Märsa, the most powerful regional lord in the first quarter of the 19th cent., and was the son of *ras* ↗Wäle Bəṭul and, hence, a nephew of *ətege* ↗Ṭaytu.

The early life of G.W. is obscure. He was born and brought up in ↗Yäǧǧu, the home of his ancestors which was governed by his father for over 20 years until 1910. G.W. seems to have been the only son of Wäle. His mother, Yäšiwärq, is hardly mentioned in connection with significant events, the implication of which may presumably be that she was of little consequence in birth and deed. G.W. was nonetheless very conscious of his noble descent, and from all accounts he behaved as an accomplished aristocrat.

G.W. received church education in his youth and often associated himself with the clergy to whom he was generous and with whom he is said to have engaged in theological and literary discourses. He endowed several churches, prominently ↗Däbrä Tabor Iyäsus. Unlike *ras* (later *nəguś*) ↗Wäldä Giyorgis who replaced him in the governorship of Bägemdər in 1910, however, G. is not remembered for persecuting Protestant and Catholic converts. On the contrary, his administration was deemed fair and just into oral tradition.

G.W. began his career as a district governor with the title of ↗*däǧǧazmač* under his father. Exactly when he moved to the service of *aṣe* ↗Mənilək II is unknown. Chronicler Gäbrä Śəllase mentions him for the first time in 1896 when the sovereign met him in Yäǧǧu on his way to ʿAdwa. The Emperor raised him to the rank of ↗*ras* in 1900 and gave him his daughter, ↗Zäwditu, in marriage. For a time, he succeeded *ras* ↗Mäkʷännən as acting governor of Təgray, but his official governorate was Bägemdər which at the time of his appointment was said to have not yet recovered from the devastation caused by the ↗Mahdist invasion, the great famine and the epidemic of 1888–92. G.W. made his seat at Däbrä Tabor, the centre chosen by the so-called Yäǧǧu dynasty at the end of the 18th cent. to replace Gondär, and through his efficient administration the economy of the region recovered fully by the first decade of the 20th cent.

G.W. is hardly known for his military prowess, and from all indications he had no aspiration to higher political power. But he was never trusted by the pro-Iyasu and pro-Täfäri groups and, hence, he suffered imprisonment following the incapacitation of the sovereign. When in 1910 *ətege* Ṭaytu was removed from the political arena, G.W. was suspected of possible rebellion and the coup leaders sought an excuse to remove him from office. He was thus incarcerated at Mount ↗Afqära for some years after which he, together

Gugsa Wäle and his entourage; from Frangipani 1936:96

with his wife, was committed to confinement at Falle, about 40 km to the north-west of Addis Abäba, until 1916 when he and his wife were released. Zäwditu was obliged to divorce him in order to ascend the throne, and G.W. remained at the capital until 1918 when he, upon the death of *nəgus* Wäldä Giyorgis, was reinstated to his governorate of Bägemdər.

All went well with him until March 1930 when the Crown Prince *ras* Täfäri viewed him as a hindrance to his reforms and a potential stumbling block in his rapid rise to power. Bahru Zewde (BZHist) attributes the immediate cause for the conflict to the control of the customs of ↗Mätämma which, through the prudent policy of G.W., had become a lucrative source of income. A scheme was devised to trap G.W. unaware: he was ordered to mobilize his men and march to Azäbo, southern Təgray, to quell a rebellion, and the route of his march was prescribed. At the same time the central government spread news that he was marching against Addis Abäba at the behest of the Italians to defend the Empress against *ras* Täfäri and, hence, a sizable army under the command of the war minister, *ras* Mulugeta, was ordered to intercept his march. When he reached Wadla, he was ordered to stop marching toward Azäbo, and on 31 March he was attacked at a place called Ančəm. For the first time in Ethiopia a plane was used to bombard the alleged rebel. His army was soon routed and G.W. himself was killed in the battle.

Bairu Tafla

Guidi, Ignazio

G. (b. 31 July 1844, Rome, d. 18 April 1935, Rome), an outstanding Italian scholar, was professor of Hebrew and Semitic languages at the University of Rome from 1876 to 1919. From 1885 to 1919 he held the chair of "History and Languages of Abyssinia" (*Storia e lingue d'Abissinia*) in the same University. G. was a brilliant Orientalist on account of his masterly knowledge of ancient Near Eastern languages and civilizations, his studies in the domains of Hebrew, Syriac, Coptic, Arabic and Ethiopic being particularly important. With all this he combined a profound knowledge of classical culture.

In his later years G. devoted himself to ↗Ethiopian studies, where, although being an autodidact, he left an everlasting imprint, just as Job ↗Ludolf did. As Ludolf cherished his ↗Gorgoryos, G. was lucky enough to have at his side the highly learned *däbtära* ↗Kəflä Giyorgis, who admirably assisted him in his understanding of Ethiopian culture. G.'s contributions to Ethiopian studies paved the way to the approach that demands a deep scrutiny of written sources for the history, languages and civilization of the whole Orbis Aethiopicus.

Having fully mastered ↗Gəʿəz and ↗Amharic, G. produced seminal works for the discipline. In the field of Amharic, his analyses of the grammar definitively clarified aspects of morphology as well as of phonology and lexicon. Famous and unsurpassed is his *Vocabolario amarico-italiano* (1901), with its *Supplemento*, to which he devoted his attention until his last days (posthumously edited by Enrico ↗Cerulli). His *Grammatica elementare della lingua amarica* (1952), first published with the title *Grammatica elementare della lingua amariña* in 1889, although elementary, offered a clear, rigorous and systematic exposition of that language, the first in its genre. In addition, he edited and published a large number of Amharic texts, with commentaries, of which be it sufficient to cite here his *Proverbi, strofe e racconti abissini* (1894) and *Le canzoni geez-amariña in onore di Re Abissini* (1889), a unique source for the history of the Amharic language. G. was also author of an untitled essay, not usually mentioned in his bibliographies, composed of a selection of passages from theological treatises of the Russian Orthodox Church, in Russian with a parallel Amharic translation (before 1889?).

Of equally paramount importance are G.'s writings about Gəʿəz texts, which embrace the whole spectrum of the Ethiopian world: history, religion, language, literature and social life. Among others, his edition (1879) and translation (1899) of the ↗*Fətḥa nägäśt* deserves special attention. The bulk of G.'s writings opened new ways to the scholarly scrutiny of Ethiopian society. His heritage passed into the hands of Carlo ↗Conti Rossini.

The wide range of subjects dealt with by G. can be seen in the following selection of his works: *Testi orientali inediti sopra i Sette Dormienti di Efeso* (1884–85); *La prima stampa del Nuovo Testamento in etiopico fatta in Roma nel 1548–1549* (1886); *La traduzione degli Evangeli in arabo e in etiopico* (1889); *La Chiesa abissina e la Chiesa russa* (1890); *Di due frammenti relativi alla storia di Abissinia* (1893); *La storia di Ḫāyla Mikāʾēl* (1902); *Leggende storiche di Abissinia* (1907); *Contributi alla storia letteraria di Abissinia* (1923); *L'Abissinia antica* (1896); *Bisanzio e il Regno di Aksum* (1924); *Il Marḥa ʿEwûr* (1896); *Le liste dei Metropoliti di Abissinia* (1899); *Uno squarcio di storia ecclesiastica di Abissinia* (1900); *La Chiesa abissina* (1922); *"Qĕnē" o inni abissini* (1901); *Der äthiopische Sēnodos* (1901); *Il Sawasew* (1906); *The Ethiopic Senkessar* (1911); [*Breve*] *Storia della letteratura etiopica* (1932) etc. Apart from that, G.'s editions, with translation and commentary, of historical (mainly royal chronicles) and hagiographical texts are to be taken into account. His *Summarium veteris linguae Arabicae meridionalis* (1930, in Latin and in Arabic) should also be remembered.

Lanfranco Ricci

Guignony, Gabriel

G. was a French merchant, established in Ethiopia starting from 1892 as "Conseiller du commerce extérieur de la France". In 1900 the French representative at Addis Abäba, Léonce ↗Lagarde, nominated him consular agent at Harär, with administrative authority over the railway. According to Lagarde, this was motivated by the fact that "this would also make it possible to allow our compatriots to appear before the consul instead before Abyssinian tribunals" in the case of litigations. The second motivation for the creation of this post was rather political, in order to have an "intelligent, able and dedicated agent at [the court of] *ras* Mäkʷännen". In the 1910s, the Maison Guignony was purchased by a German company from Hamburg (Samuel Simon Ismaël). G. was the first employer of Henry de ↗Monfreid. In April 1918 the British Embassy at Paris asked the French Ministry of Foreign Affairs for information on G., as he had the project to establish himself in Kenya to construct a factory. Further data seem to be lacking.

Lukian Prijac

Guillain, Charles

G. (b. 1808, d. 1875, Lorient) was a French seafarer. He graduated from the Naval College of Angoulême (France) in 1827. From 1836 to 1840 he took part in campaigns in the Indian Ocean and the Red Sea.

Appointed Captain of Corvette in 1842, G. took over the command of the ship "Du Couedic" (1846–49) for an exploratory mission of the east coast of Africa and the Indian coast. For the first time in the history of scientific expeditions, photography was used to record people and landscapes. G.'s expeditions concentrated on Somalia and Zanzibar and were of a uniquely commercial and topographical nature.

In 1870, G., then Admiral, was appointed to the post of Governor of New Caledonia.

Gullallee

G. (Amh. ጉላሌ, *Gulale*) was one of the members of the Oromo tribal confederation of the Torban Oboo, together with the Salaallee (Amh. ↗Sälale), the ↗Oborra, the Gombeččuu, the Yakkaa (Yäkka), the Mullo and the Badi. The G. used to inhabit the western foothills of ↗Ǝnṭoṭṭo, being bordered by the Meetta, the Galaan (Gälan), the Yakkaa and Mullo, whilst a good part of the G. also occupied the area around the Mugär, neighboured by the Yayyaa (Yäyya), the ↗Ǧaarso, Adʾa Barga and Oborra Oromo.

From their distribution it can be inferred that the G. members once dwelled in the vast area between the present day ↗Addis Abäba and the ↗Abbay. It seems that the G. are identical with the Oromo of Sululta and ↗Finfinnee. G.'s historic areas of settlement can be placed in the area of the present Sälale north of the Yayyaa and Ǧaarso and north of Däbrä Libanos. A large majority of the G. seem to have inhabited the area of the present-day Addis Abäba, stretching from the south-western foot of the Ǝnṭoṭṭo to the Eegdu Mountain in Meetta and covering the whole area of Asko and Lollibaa. They seem to have established themselves at the foothills of Ǝnṭoṭṭo and its environs after displacing the Gälan Oromo. The G. were also opposed to the Burrayyuu Oromo sub-clan due to some inter-tribal rivalries and to the G.'s close contact with the rulers of the Šäwan kingdom.

Even though the G. were close to the rulers and on many occasions accommodated the Šäwan soldiers, *nəguś* ↗Śahlä Śəllase attacked them in the course of his expansion and devastated G. settlements, including that of Bäčo and southward all the way as far as the ↗Soddo Oromo. Reportedly, this was the cause for a series of Oromo rebellions against the authority of the Šäwan king during the 1840s among the Ǧiddaa tribe, the G. (1840) and the Adʾa Barga (1841). In 1878 a rebellion broke out against Śahlä Śəllase's grandson, *nəguś* Mənilək of Šäwa (↗Mənilək II). Reportedly the incident was triggered by an Amhara soldier, who was quartered in the house of a G. family and injured one of the cows of the latter. A huge massacre of Amhara by the G. Oromo ensued.

The G. were among the first Oromo to convert to Christianity and start mixing with the Amhara, enforcing Amhara–Oromo interaction in Šäwa. Two place names epitomize the eventful presence of the G.: Gulale was a name of a quarter in western Addis Abäba up to 1974; Yäyya Gulale was a *wäräda* in the former *awrağğa* of Sälale after 1941 (currently in the Oromiya zone of north-western Šäwa).

Ahmed Hassen Omer

Gullət

G. (ጉልት, also *g^{w}əllət*; from *g^{w}ällätä*, 'set up a border', 'delineate', cp. KaneDic 1894) is the name for the small street-side market places found in every part of Ethiopia. Sometimes many G. are set up around the same area, as in Addis Abäba's Šola, Č̣ärqos, Agoza and Märkato (↗Addis Kätäma). As small-scale retail business-es established just for subsistence, most G. operate without a license or working permit, paying no taxes. Each G. seller has his own mound made of mud and stone, hence its name. The products offered, always in small quantities, are mostly vegetables, cereals and other things needed at home for immediate use, displayed on a sheet of plastic and piled in rows. Some G. keepers sell traditional medicines as well.

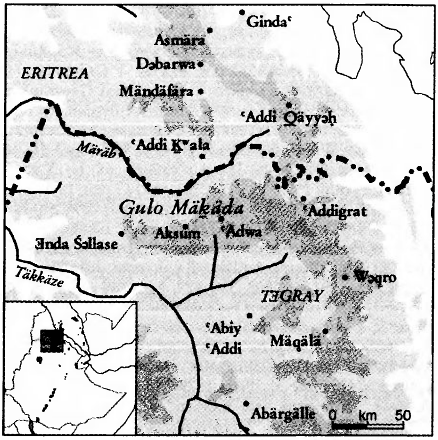
Tesfaye Akalu

Gulo Mäḵäda

G.M. (ጉሎ፡ መኸዳ, variants: Gʷəlo Mäkäda, Gʷälo Mäkäda, Golo Mäḵäda, Gulo Maḵda etc.) is a frontier district in the ↗ᶜAgamä region of northern Təgray, bordering upon the ↗Akkälä Guzay region of Eritrea to the north. The landscape of G.M. is dominated by a large plain and the Daḵane stream ravine, the mountain of ↗Dängolo to the north and ↗Amba Foqäda to the south – all the localities being rich in remnants of ancient monuments. The district is inhabited by Təgrəñña- and Sāho-speaking communities. The G.M. area may be the location of some of the earliest Christian communities in Ethiopia, and the documentation of a number of ↗Aksumite-culture-period archaeological sites suggests that it was a noticeable Aksumite settlement centre in the early first millennium A.D. Situated almost exactly midway between the Gulf of ↗Zula and the town of ↗Aksum in Təgray, G.M. may have been well-placed along a probable ancient route linking the Red Sea coastal port of ↗Adulis with the Aksumite capital via ↗Qoḥayto. Evidence of Aksumite-culture-period occupation is found at sites such as Daḵane, ᶜƎč̣ Märra, Ǝnda P̣eṭros, Ǝnda Täklä Haymanot, Ǝnda Maryam and Männäbiyät. Earlier records bear witness to impressive local monuments that, however, must have deteriorated and suffered considerable destruction in the course of time (for ᶜƎč̣ Märra, s. Coulbeaux 1929, vol. 1, 309; cp. Leclant – Miquel 1959:107ff.).

In several documents G.M. appears in connection with various historical traditions. The hagiography of *abba* ↗Mäṭaᶜ, of the first half of the 15th cent., enumerating the lands granted to the churches of Mäṭaᶜ/Libanos by King ↗Gäbrä Mäsqäl, explicitly warns the *śəyyum* of G.M. not to enter them (Bausi 2003, no. 155; cp. also a miracle of Libanos, ibid., no. 259). G.M. is also mentioned in the *Mäṣḥafä ↗Aksum* (CRAxum 11); and in one of the following land charters, the same king gives six "countries" (*ahgur*) of G.M. to ↗Däbrä Damo: Betä Nobäyt, ᶜƎṣ́ Maᶜəre, Ad Gədom, Bäqlo, Gäläba and Ham (CRAxum 20, and HuntLand 30, no. 4; the list is uncertain, cp. the same document in the Acts of ↗Zämikaʾel Arägawi, s. Guidi 1895:33, 42). Traditions of northern Ethiopia associate G.M. with Gäbrä Mäsqäl and ↗Makädda (G.M. being interpreted, in Təgrəñña, as 'pen of Makädda'; cp. Fesseḥa Giyorgis 1987:15, 176f.). Elsewhere G.M. is said to be the place from where the Mäḵada – a Təgrəñña-speaking group descending from Harisay, a son of a King Gäbrä Mäsqäl – migrated in order to found later ᶜƎmni Ṣällim, near Dəbarwa (KolTrad II, no. 29; cp. Conti Rossini 1902:389 and n. 1; 1942:189).



According to his Vita, ↗Bäṣälotä Mikaʾel was exiled to G.M. by *aṣe* ↗ᶜAmdä Ṣəyon I. There the Saint was cordially received by his disciples, who prepared for him a rock-hewn cell (*bäᶜatä kʷäkʷəḥ*). Bäṣälotä Mikaʾel died at G.M. and his relics were then translated to Sägla by *abunä* ↗Yaᶜəqob. The former importance of G.M. is attested in an account from the ↗*Täʾammərä Maryam* relating the miraculous water dropping from the ceiling of two churches – the one being in G.M. "which is called the house of Mäṭaᶜ", i.e. ↗Däbrä Libanos of Šəmäzana (a remark, like the land grant about Ham, confirming the relevance of this monastery to G.M.), the other in Gʷəgʷəda (also in G.M. or nearby), "the grave of blessed Mammas the monk" (either an Oriental saint commemorated on 5 *Mäskäräm* or, more probably, one of Bäṣälotä Mikaʾel's disciples, s. Vélat 1948:171f.).

Matthew C. Curtis – Denis Nosnitsin

Gumaa

G., the payment of compensation for homicide, is a frequent means of conflict-settlement in ↗Oromo society. The compensation, to be made in either cattle or money, has to be paid by the family of the murderer to the family of the deceased and should prevent revenge and further killings. The amount and kind of the blood-compensation is fixed by the ↗*gadaa* assembly and by the traditional law (↗*seera*). In case the victim belongs to a different tribal segment, the whole lineage or clan of the killer can be held liable for the payment. The peace-making is effected by elders of both sides and consists of a highly formalized procedure that may last over years. The aim is to reconcile the hostile groups or families rather than to find and punish a culprit. The procedure is closed with the handing over of the G. and with the joint holding of reconciliation rituals (including sacrifices) by the opposed kin groups. ↗Amhara and other people who live together with the Oromo, sometimes share with them the system of compensation.

Andrea Nicolas

Gumär

Gumär language

G. (also Gumer, Gomer, self-designation Gʷämära; s. map for ↗Gurage) is spoken in the highlands to the east of the ↗Čaha speaking area. The main town in the region is Aräqqəṭ. The neighbours of the G. are the ↗Səlṭi and Mäsqan to the east, ↗Ǝža and ↗Muḫər to the north, ↗Geto to the south and Čaha to the north-west (cf. Shack 1966:209). The number of G. speakers is not known because G. is considered a dialect of a linguistic unit called Western Gurage (cf. Grimes 2000:113). The G. are said to be closely related to the Čaha both historically (Shack 1966:103) and linguistically (Hetzron 1977:4).

Typologically G. is a Gunnän-Gurage language (Hetzron 1977:4). Genetically it forms, together with Čaha, Gura and Ǝža, the Central Western Gurage language group (CWG), which is part of the Outer South Ethiopic branch (Hetzron 1972:119).

Hetzron (1977:34f.) enumerates the vowels *ɔ* (< *awä) and *ä̈* (< *älä) for G. beside *ä, a, e, i, o, u* and *ə*. G. possesses labialized and palatalized consonants and occasional occurrences of gemination in connection with devoicing of voiced plosives (cf. ibid. 39f.). G. as a member of the CWG languages has no palatalized nasal *ñ* (ibid. 38). Merger and phonologically conditioned change of the liquids *l, r, n* also appear in G. (cf. Hetzron 1972:62), e.g. *nəqiyä bet*, 'big house' but *tä-rqiyä bet*, 'from a big house' with the alternation *n* ~ *r*. There is a tendency to change *w* following a consonant to *bʷ*: *wäṭṭa-m*, 'he went out' becomes *am-bʷäṭṭa*, 'he did not go out'. A lateral *l*, which is extremely rare in CWG, occurs in certain possessive suffixes and in the beneficiary object agreement markers of the third persons (Hetzron 1977:38). The lateral is also a part of the present tense copula in 3rd pers. masc. *-lo* and in 3rd pers. fem. *-läma* (contrary to Hetzron 1972:83, 89; 1977:106).

The verb has three basic paradigms: perfective, imperfective and jussive/imperative. G. belongs to the three tense languages, i.e. there occurs a tense distinction between definite future (imperfective + suffix *-te*), indefinite future (jussive + suffix/verb *-šä*, 'to wish') and past/perfective (cf. Hetzron 1977:77ff., 1972:60f.). Subject agreement is expressed by different morphemes in the perfective and in the imperfective and jussive paradigms (cf. Hetzron 1977:77ff.). Object agreement is expressed by two different suffix sets – light and heavy – on the verb (cf. ibid. 68f.). G. has an unusual object agreement marker and possessive suffix for the 1st pers. pl. *-ndä* (cf. ibid. 41, 68): *bet-əndä*, 'our house' or *denäg-ä-ndä* (hit:PV-3rd sg. masc.-1st pl., 'he hit us'). Beside a distinct verbal paradigm for the impersonal (Hetzron 1977: 81ff.) – a kind of passive construction – there occur two distinct converb forms. The first converb consists of a verb in the perfective, imperfective or jussive followed by the suffix *-m*, the second converb uses a special template similar to the jussive followed by a suffix *-t* (Hetzron 1977:96f., 1972:101ff.). The negative marker for the 3rd pers. sg. masc., 3rd pers. pl. masc. and 3rd pers. pl. fem. in the imperfective and jussive is *e-*: *e-säßər* 'he will not break', *e-sbər*, 'he should not break'. All other persons use the negative markers *an-* ~ *ã-* or *a-*: *ã-säppär-hä*, 'you (2nd sg. masc.) did not break'.

G. does not possess plural marking suffixes on nouns (Hetzron 1977:52). Plurality is either indicated by quantifiers or by the usage of subject agreement markers in the third person plural on the verb.

While Hetzron (1977:56) indicates that G. uses the possessive suffixes as definite marker, the author recorded a definite article *-we* for items, which have already been mentioned in the discourse: *bet-we* 'the previously mentioned house'. This article also appears in ↗Muḫər and Ǝža (cf. ibid.). Furthermore, two distinct possessive suffixes for the 3rd sg. masc. exist: *bet-äta* and *bet-huta*, 'the/his house'. The suffix *-huta* seems to occur in contexts where the possessed item is a specific and referential item of the shared knowledge between speaker and hearer. Nominative and accusative are not distinguished morphologically. The genitive and dative are marked by the prefix *yä-*, e.g., *kuttära yä-ättämʷä-hʸita aß-äčč-əna-m* (chicken to-sister-her give: PV-sub3sgfem.-obj.3sg.fem.-DCM, 'She gave a chicken to her sister') or *zəh äram yä-mammo abba äram-u* (this cow of-Mammo father cow-is, 'This cow is the cow of Mammo's father'). Source and instrumental are indicated by the prefix *bä-* (*bä-bet-äta*, 'in his house', *bä-čähʷä*, 'with a spear') and the locative/ablative by the prefix *tä-* (*täbet anqʸä*, 'behind a house'). The prefix *tä-* is also used as commitative marker (cf. Hetzron 1977:54). These positional relations can be further modified by postponed elements: *tärqiyä bet yiftift*, 'in front of the small house'.

The basic word order is Subject–Object–Verb. The declarative marker (DCM) *-m* occurs only with affirmative perfective main verbs. Genitives, relative sentences and adjectives precede the head noun.

The personal pronouns for the third persons are: *hut* ('he'), *hʸit* ('she'), *həno/hənäma* ('they [men or mixed/only women]'). Demonstrative pronouns do not distinguish gender or number. The pronoun *zəh* refers to near and *həh* to far object(s) or individual(s).

The present tense copula – except in the third persons – consists of an element *-n-* followed by subject agreement markers used in the perfective (cf. Hetzron 1977:105). In Hetzron's G. data the copula is *-nä-* instead of *-n-*. In the 3rd sg. masc. the copula is the suffix *-w*, in the 3rd pers. sg. fem. *-ya*, in the 3rd pers. pl. masc. *-lo* and in the 3rd pers. pl. fem. *-läma*, e.g. *näggade-lo* (trader-COP:3pl.masc.), 'They are traders'. The negative present tense copula is expressed by the negated verb *härä* 'to be' in the perfective: *hut näggade ã-härä* (he trader NEG-be:PV:3sg.masc., 'He is not a trader').

Question words can appear as basic interrogative pronouns (*mʷan* 'who', *mäččä*[*ra*], 'when') or as compound forms (*mən-qar*, 'what [thing]', *yä-mʷan*, 'whose', *yä-mər*, 'why', *mämmər*, 'how').

The basic word list contains the following items: *ʾat*, 'one', *hʷet*, 'two', *sost*, 'three', *əsat*, 'fire', *äha*, 'water', *čet*, 'sun', *ṭänaqa*, 'moon', *däm*, 'blood', *anäßät*, 'tongue' and *sən*, 'tooth'.

A comprehensive grammar and a lexicon of G. are still a desideratum. Hetzron (1977) contains a linguistic description of Gunnän-Gurage with several references to G. Further grammatical points are discussed in Hetzron (1972). The only easily available written text in G. is a folktale in Hetzron (1977:210–16).

Ronny Meyer

Gumär ethnography

G. (also Gʷämara, Gomaro) is a sub-group and a district of the *Säbat bet* ('Seven Houses') Gurage confederation. Before the formation of this alliance the G. had already close economical and military relations with the forerunning *Ammәst bet* ('Five Houses') confederation. The territory of the G. is situated in the Gumär and Geta [Geto] *wäräda* of Gurage zone (formerly in ↗Ç̣äbo – Gurage *awrağğa*) on the eastern edge of the Gurage highland bordering the territories of the ↗Mäsqan and Aliččo-Wәriro in the east, the Azärnät-Bärbäre (↗Sәlṭi) south of the Mogaže ridge and the ↗Čaha and ↗Geto to the west. Today the rural town of Qabul at the Ǝndәbәr-Hossana road is the main centre of G.

The G. have a mixed farming system. Typical products of the G. area are barley and cattle. *Ǝnsät* was introduced comparatively late (cp. ShGurage 63, 73). Today labour migration is an important base of G. economy.

The G. have strong historical links with ↗Čaha. According to oral historiography G. seceded from Čaha after a war between the followers of two ancestral brothers, Mogämänna and Ǝnäkʷamt. The brothers are said to have had "Arab" ancestors, i.e., genealogical linkage with the Adäre or East Gurage-speakers through *imām* Sidi. While the main part of Čaha country was dominated by the Mogämänna clan, the western part, G., came under the domination of the Ǝnäkʷamt clan (ShGurage 103). The list of G. clans documented in Dәnbäru Alämu et al. (1987 A.M.:87) gives 15 clan-names including among others, the ↗Ǝža clans of Qončača and Šarara, the Azärnät-Bärbäre clan of Abäke, the Mogämänna as well as the ↗Fuga people. The different clans are represented politically in the assembly of the *Gumär sera* (G. traditional social order) in Ğämbʷarä near Gäbrәʾel Church.

In the second half of the 18th/first half of the 19th cent., the Azärnät-Bärbäre more and more expanded to the south and south-east, the G. reacted by expanding their territory into former Azärnät-Bärbäre lands. Some ancestral Azärnät-Bärbäre graves can still be found near Abäke and Qeto in today's G. territory. Notwithstanding the frequent conflicts with each other, the G., Geto and Azärnät-Bärbäre G. fought on the same side against the Leemo ↗Hadiyya many times.

During the resistance of the *Säbat bet* Gurage against the expanding Ethiopian empire, Aräkәt in G. was the location of a famous victory (1875) for the Gurage.

The name of G. should not be confused with a number of similar names such as "Gomār" on the map of Almeida (BeckHuntAlm xcvif) or "Gumär Sanqa" an area in Wämbarma in Goğğam (cp. HuntGeogr 185, 197; BeckHuntAlm 10, 212 [map], 241; PerChron; ConzGal). *Abba* Baḥrәy mentions a tribe of "Gomär" which was christianized by *aṣe* Śärṣä Dәngәl (r. 1563–97) and whose relation to G. remains unclear. Similar names can be found also in many variants with different – in part derogative – meanings around the Käfa area (↗Gimira, Gumera, Gamero, Gumara; s. Freeman – Pankhurst 2003:76, 92, 127).

Dirk Bustorf

Gumuz

Gumuz language

G. is a dialect cluster of the Ethio-Sudan border area, south and south-west of Lake Ṭana. The language has not been satisfactorily classified: Bender 1996 (also 1979; 1985) considers it to be close to ↗Koman, but this is now seen as doubtful since G. and Koman are geographical neighbours and most of the resemblances are lexical. There is no generally accepted self-name for the G. varieties and not all speakers recognize the name G. (variant: Gumis). The phrase *ŋgiša baha* ('speech-of people') or local clan-names are used. The old term Šanqillәñña was an imprecise pejorative, meaning 'language of the Blacks' (↗Šanqilla), used for several lowland Ethiopian peoples. The literature on G. is slight: aside from those listed below, there are only field notes, scraps of linguistic data in older sources and some brief unpublished papers. Peter Unseth presented two papers on G. (Unseth 1990). G. was not included in the Survey of Little-Known Languages of Ethiopia (S.L.L.E.). The estimated number of speakers is 40,000 in Sudan and 50,000 in Ethiopia (Grimes 1996:261f.). There is no literature in G. aside from the usual texts and translations prepared by religious proselytizers.

The main varieties of G. which have been (partially) described are those of Kokit (a locality near Mätämma, data collected by Bender in 1970, 1974), Sai (a group of clans, data collected in Addis Abäba by Bender in 1976), Sese (a Sai variety, data collected in Irwin 1964, 1966 and Uzar 1984), Goǧǧam (data from Conti Rossini 1919–20, collected from earlier sources).

The phonology of G. varies slightly from dialect to dialect. In the Sese variety (Uzar 1989), the segmental phonemes are:

labials: *p̣, p, b, ɓ, f, m, w*
alveolars: *ṭ, t, d, ɗ, s, z, ʦ, ṣ, n, l, r*
alveo-palatals: *č, č̣, š, ž*
palatals: *c, c̣, ɟ, ñ, y*
laryngeals: *ʾ, h*
velars: *q, k, g, g, ŋ*
vowels: *i, e, a, o, u, ï, ee, aa, oo, uu*

Vowel length and stress are independent suprasegmentals. There are three tones: high (*á*), mid, or unmarked (*a*), low (*à*), as in *cílà* 'something around pig's muzzle (?)' vs. *cíilá* 'intestines' (Uzar 1989:363).

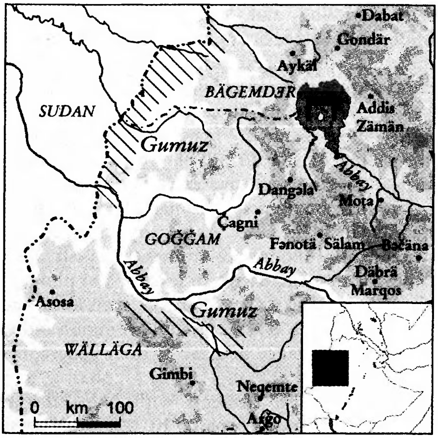
A sample of phonemicized basic lexicon from the Sai variety (Bender notes) follows:

'one'	*metam*	'moon'	*bidya*
'two'	*mband*	'sun'	*oka*
'three'	*okak*	'blood'	*maha*
'fire'	*mandya*	'tongue'	*q(ʷ)oteta*
'water'	*aya*	'tooth'	*qosa*

The self-standing pronouns of G. are unlike those of any other Ethiopian language. There are no gender distinctions except for doubtful ones reported for Sese and Disoha 3rd pers. sg., but 1st pers. pl. has a distinction of inclusive vs. exclusive. The Sai system is typical:

Sg.: 1st *aɗa ~ ara*, 2nd *ama*, 3rd *ah [ax]*
Pl.: 1st incl. *akwa*, 1st excl. *(a)ila* 2nd *akya*, 3rd *mmam*

The demonstratives in Sai are: *bane* ('this/these'), *bate* ('that/those') based on a general element *ba*. Plurals are identical to singulars. The Kokit system is different: near sg.: *-la*, near pl.: *-laane*; far sg.: *-let*, far pl.: *-leet*. There is a sentential interrogative marker *-ai* (with rising intonation) in Sai. Interrogative pronouns vary somewhat from dialect to dialect; typical are Sai: 'who?' *ora*, *ore*, *ole*, etc.; 'what?' *inṣa*, *inṣe*; 'when?' *nogwab*(*e*), *gamaʦ*(*e*); 'where?' *nogwab*(*e*), *eyabe*; 'how much, many?' (*an*)*zeŋaʦ*, *ṣaanze*; 'why?' *genṣe*, *ginṣe*. The basic connective 'and' in Sai is *ga/gi/ka*. Zero copula in the present tense is common in Sai, Sese, and Kokit dialects. The situation in other tenses is not clear. In Kokit, there is a verb of existence 'there is': *ʾin*, and a copula: *na*. Sese future copula is *da*.



The Gumuz verbal conjugation is very complex and still not well-described (best source is Uzar 1989). Much dialectal variation occurs. There are two types of paradigms: "split", in which infixes are used, and unsplit. The system includes both numerous tenses and numerous aspects. The imperative can be taken as the basic or elicitation verb form. Mode, interrogative, and negation are also categories of verbal conjugation. The paradigms are based on affixes in highly agglutinated forms. G. has a directional affix *-e-*, similar to the one found in Mağang(ir).

Typologically, G. is Type A (dominant sentence order: Subject–Verb–Object) along with all other Ethio-Sudan border-area Nilo-Saharan languages (↗Berta, Koman, ↗Nilotic), which have been relatively uninfluenced by Afrasian languages (↗Kunama and ↗Nara are languages which have been more influenced). G. is highly agglutinative and tends to have long words, a characteristic of the Northeast African area (↗Ethiopian Language Area), e.g. *bár-á-á-ŋ-gá čer-ké-k´ òn-ži-í-nà* 'I lean against' (Uzar 1989:368).

Bender 1989 and 1991 summarizes Nilo-Saharan morphology and Bender 1996 Nilo-Saharan phonology and lexicon, concluding that G. belongs in Nilo-Saharan and, indeed, in a central core of languages along with Koman. Nevertheless, doubts remain. The isoglosses linking G. to Core Nilo-Saharan are mainly negative (loss or weakening of the *a/i* sg./pl. formative), typological (having inclusive/exclusive 1st pers. pl. pronouns), or dubious (having possible gender markers in 3rd pers. sg.). As already noted, the independent pronouns are different from all other Nilo-Saharan languages. In lexicon and phonology, it is hard to differentiate between influence from Koman on G. and possible common Nilo-Saharan inheritance because of their geographical propinquity. Doubts about G. sharing any significant lexical elements with Nilo-Saharan have been expressed recently by Mikkola (1999) in a sophisticated lexicostatistical study.

The intriguing possibility remains that G. may not be Nilo-Saharan after all, which means that it is an African "isolate" not belonging to any of the great African phyla and perhaps representing an ancient phylum now otherwise extinct.

M. Lionel Bender

Gumuz ethnography

G. (ጉሙዝ) is the term designating an ethno-cultural group of ca. 122,000 people (CSA 1998:66) who live in the lowlands of western ↗Goǧǧam and Wälläga near the border with the Sudan. An isolated G. group has been reported in a valley near Mätämma. G. speak a Nilo–Saharan language and predominantly identify themselves as "Beğa". The G. are a non-centralized, segmentary society of shifting cultivators and agro-pastoralists. Traditionally, they dwelt on the margins of the political centres in both Ethiopia and Sudan and were frequently the victims of slave-raiders. Such bands of slave-raiders were formed by numerous groups: Ethiopian highlanders, neighbouring Oromo and even Arabs from the Sudan; the Agäw chief Zälläqe Liqu was also a notorious raider among the G. In addition to the people, the wildlife in the G. region was also exploited. During the first half of the 20th cent., G. country (↗Mätäkkäl) was a popular hunting-area for the Sudanese and Ethiopian elite, who sought big game, especially the elephant.

Together, the G. form a conglomerate of related groups, some of which have different self-designations (including Sai, Sese and Beğa); their territory was forcefully included in the Ethiopian Empire in 1898. Before the 1980s they were mostly called ↗Šanqilla, a pejorative term for dark-skinned people used by highland Christian and Muslim Ethiopians, including the nearby Beni Šangul *šayḫs*. Most of the neighbouring peoples—the Arabs from the Sudan, the Oromo, the Amhara and other highlanders, and the local Agäw—regarded the G. with contempt, only the people of Šinašša had a good relationship with them.

Because of its particular exploitative relationship with the Ethiopian state (epitomized by *ras* ↗Ḫaylu Täklä Haymanot, the predatory ruler of Goǧǧam) and the Sudanese local rulers across the border, the G. area was never properly integrated into a wider polity but remained a typical "frontier" area that was, nevertheless, heavily taxed by the central state.

The G. are organised in clans and have a matrilineal descent systems even though they are a patrilocal group. People are permitted to marry outside their own clan and if the economic climate permits, marriages may be polygynous. Sister-exchange (*angiyya*) is a form of marriage frequently practised between men from different clans. Traditionally the G. are an egalitarian society without central leaders. To deal with disputes, each clan has an appointed mediator (*tesa*), while trans-clan disputes fall under the jurisdiction of the government courts. Access to land is regulated through clan membership.

Religions found among the G. are Christianity (both Ethiopian Orthodox and, more recently, Evangelical) and Islam, reflecting earlier contacts and associations with other groups. The G. also maintain their traditional religion, which is focused on a creator god (*Rebba*) and the belief in ancestral and other spirits. The religious specialists (*etmaowa*) perform all of the necessary sacrifices and cultic ceremonies. This religion also has traditional ethno-medical specialists (*guahea*) and diviners (*etmussa*).

The G. country is a hot, malarial and fertile lowland area. The inhabitants predominantly practise shifting cultivation with the hoe and cultivate a variety of crops: cotton, coffee, peanuts, millet, oil seeds, beans and sorghum; beekeeping, alluvial gold-panning and animal husbandry (goats, cattle, sheep, donkeys and mules) are also practised. Additional activities practised by the people are hunting, fishing and gathering. The G. participate in regional trade, selling cash crops (cotton and tobacco) and other products (animal skins and gold) at local markets and in the adjacent Sudan. Trading on a smaller scale is also performed by the women.

Recent years have seen an influx of external groups to the G. region. Under the *Därg* regime, the G. country became a resettlement area for people from famine-prone northern and central Ethiopia and over the last few decades there has also been a steady encroachment of highland-type plough-agriculture on G. lands; this in turn has led to recurrent tensions.

Since 1992 the G. have formed part of the new regional Ethiopian state of "Beni Šangul–G.", which, despite recent government investments, is economically and politically one of the weakest units in the Federal Republic of Ethiopia.

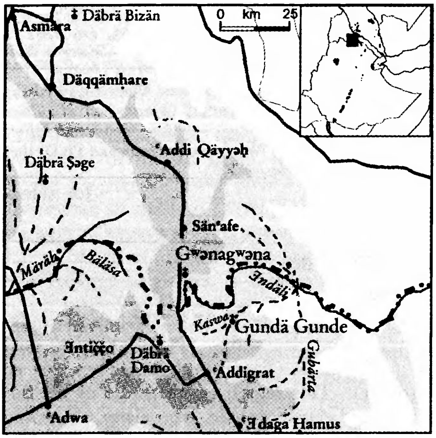
Jon Abbink

Gundä Gunde

History

The locality of G.G. (ጕንዳ፡ ጕንዴ, also Gundagundi, Gʷəndagʷəndi, Gʷəndagʷəndo etc.) is in ↗ᶜAgamä (Təgray), about 30 km east of ᶜAddigrat. This region is the cradle of the Surukso and ↗Irob people, who claim, according to recent tradition, connection with Greeks and Romans (Ricci 1953:66 and n. 2). The famous monastery of G.G., equally known as Däbrä Garzen (ደብረ ፡ ጋርዜን, also Däbrä Gär[ə]zen, Gärizan), lays there at the confluence of the streams Wärat and Kaswa: hence its further name of Däbrä Kaswa (ደብረ፡ ከስዋ). Built on a semicircular slope of the rock (1,450 m A.S.L.) opening into the streambank and strengthened by stone walls, it includes some 30 dwellings of rectangular shape all around the main church, Gundä Gunde Maryam. The names Däbrä Garzen and Däbrä Kaswa (corrupted into Kokäwa [ኮከዋ] in some manuscripts) may in fact have referred to two originally different monastic settlements – the oldest one being probably Dabra Garzen, of unknown origin, then superseded by Däbrä Kaswa (Caquot 1961:90).

G.G. became the spiritual centre of the followers of *abba* ↗Əsṭifanos (↗Stephanites), thus playing an important role in the religious history of Ethiopia (Beylot 1997:119ff.). In the sources, the leaders of the Stephanite movement are quite often associated with Däbrä Garzen. Grounding on two local monastic genealogies, partly also published by him, Antonio ↗Mordini (1953: 56ff.) provided a tentative list of the "abbots" of G.G. (ibid. 59f.) – who are in fact, according to those documents, "doctors [*mamhəran*] of Kaswa", i.e. successors of Əsṭifanos at the head of his congregation. This prompted the erroneous opinion that their series is one and the same as the list of the abbots of G.G.; and, more generally, that the latter was a Stephanite foundation since its very beginnings.



In the Acts of Əsṭifanos (fol. 36r), it appears that, at the onset of his monastic career, while staying with his disciples near the ↗Täkkäze, close to the monastery of Zeranqʷa, he invited them to remain "at Däbrä Garnen". It might be an early reference to Gärzen; but this is far from being certain. More positively, the G.G. "Chronicle of the Stephanites" – a 16th-cent. narrative of the persecutions endured by their first generation (ms. now lost, but microfilmed by R. ↗Schneider: no. 63 of his unpub. list) – informs about Əsṭifanos moving to Däbrä Garzen after his first apparition before *aṣe* ↗Zärʾa Yaᶜəqob in 1434 (fol. 50r–v; s. Beylot 1984:32, n. 43).

The founder of Däbrä Kaswa was indeed Yəsḥaq (Ferenc 1976:244): according to local tradition, in which he is styled as *säräre adbarat* ('founder of monasteries'), he established the main church of the place, today dedicated to St. Mary. A native of Nəhba (ᶜAgamä), he entered the community of *abba* ↗Samuʾel of Däbrä Qʷäyäṣa and, in 1435, he joined Əsṭifanos. Toward the end of his life, fearing the incumbent hostility of *aṣe* ↗Zärʾa Yaᶜəqob, Əsṭifanos designated ↗Abäkäräzun and Yəsḥaq as his first and second successors. In 1444 (the year of the withdrawal of the Stephanites due to persecutions) Yəsḥaq took shelter in Təgray, also on account of disputes with Abäkäräzun, from whom he was to part company later (s. the "Contending of our Fathers and Brothers [...] who Dwelt in Däbrä Garzen", ms. IES 496 = EMML 4, fol. 39v). On 19 October 1445, Yəsḥaq was arrested and exiled (*ibid.*, fol. 33v). Ordered to return by Abäkäräzun in 1451 or 1452 (*ibid.*, fol. 43r), he seems then to have retired to ᶜAgamä, precisely to Kaswa, already within his father's dominion. Thus, from the local *śəyyum*, he obtained the land of Kaswa as a ↗*rəst*, having a church built and a large community gathering there under his leadership. In the Stephanite tradition, this foundation was connected with a prophecy on Kaswa uttered by Əsṭifanos, at the court of Zärʾa Yaᶜəqob, in 1434 (Gigar Tesfayé 1979:95f.).

The monastery, established in ca. 1452, was soon burned at the order of *aṣe* Zärʾa Yaᶜəqob (*Gädlä Yəsḥaq*, fol. 76r–77r). It was rebuilt, with the church, thanks to the active help of Abäkärazun, who left G.G. ca. 1458 – possibly, in the course of still another persecution and burning. Yəsḥaq must have died in 1476 (Caquot 1961:74, 96).

It was at Däbrä Kaswa, then presided over by Yəsḥaq, that ↗ᶜƎzra entered the religious life at the age of twelve. Possibly in the same period, four years before his death, i.e. in 1472, Abäkäräzun established himself again at Däbrä Kaswa, which he had abandoned 14 years earlier. Here he attended Yəsḥaq's death in 1476. *Abba* ↗Gäbrä Mäśiḥ, successor of Abäkäräzun between 1476 and 1522, lived in Dusaʾa and paid only short visits to the nearby Däbrä Kaswa. Towards 1500, under *aṣe* ↗Naᶜod, the monastery was again burned. ᶜƎzra lived there around 1480 and then from 1509 almost until his death (1520), fostering complete reabsorption of the Stephanite movement into Ethiopian orthodoxy. His last stay there was marked by a further rebuilding of the church, which had been burned once again. Under the sixth successor of Əsṭifanos, Isayəyyas (1554–72), the region of G.G. had to face Oromo and Muslim invasions that affected the life of the monastery (Ferenc 1976:250, 276). The subsequent history of the place, after the vanishing of its dissident character, is less-known, though the library of the monastery is certainly furnished with abundant materials that could shed light on the obscure period from the late 16th to the early 19th cent., before the visit of Giustino De ↗Jacobis in January 1844 (2000:571-88; cp. Ricci 1953). In recent times, the place was protected and cherished by the local rulers of Təgray: in particular, *ras* ↗Wäldä Giyorgis and *däǧǧazmač* ↗Säbagadis. The aforesaid dwellings around the main church are presently abandoned; in 2002 five monks alone were living in the monastery.

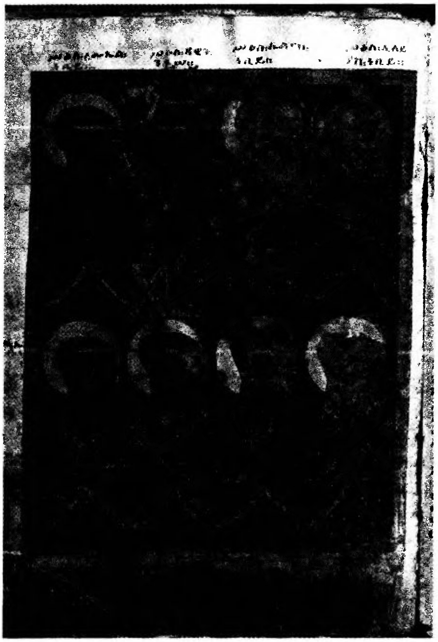
Art and achitecture of Gundä Gunde

In keeping with its importance as the "metropolis" of the Stephanite congregation, the monastery of G.G. enjoyed renown for its scriptorium and library – a collection of manuscripts remarkable for both the age of the books and the variety of texts they transmit.

The volumes, quickly seen by De Jacobis in the church library (2000:579ff.; cp. Ricci 1953: 67), amounted to ca. 800 at the time of Antonio Mordini's visit, but he was able to inventory only some 200 pieces (Mordini 1944–45:152 and 1953: 39–55). Among these, a few extremely rare ancient works have been preserved that were translated from Greek in the ↗Aksumite period: e.g., the apocryphal *Pastor of ↗Hermas*, copied in a magnificent 15th-cent. book (now Parma, Biblioteca Palatina, ms. Parm. 3842 = Mordini 9), and once even available at G.G. in two significantly differing exemplars (Fiaccadori 1994:90 and n. 88, 102); and the treatise *On the Antichrist* by Hippolytus of Rome (Id. 2003:251 and n. 30–31). It seems that under dangerous circumstances other monasteries of the congregation sent thereto some of their books (cp. Ellero 1939:46). So, beside transmitting texts extant nowhere else, which were locally to inspire a rather controversial theological literature (s. Fiaccadori 1993:82f. and, against, Piovanelli 2004:204f.), the works gathered or produced at G.G. allow a detailed reconstruction of the history of this extremely conservative milieu and of the Stephanite movement centered in it. Starting with the Acts of Yəsḥaq, the series of Vitas of G.G.'s "doctors" and "abbots" (mostly unpublished) is continued till the 19th cent. The already mentioned "Chronicle" of the Stephanites seems to be an early intance of monastic ↗historiography.

The main church of G.G. is especially interesting, for it represents a typical sacred building of the late 15th/early 16th cent. that underwent since very minor changes. It is a oriented rectangular tripartite basilica (ca. 14 × 18 m and 6 m high in the central nave) with three doors in the eastern façade (cp. Mordini 1953:37). Four cruciform pillars divide of the central part of the interior and mark the space of the enclosed square ↗*mäqdäs*



Old Testament Prophets (Samuel, David, Elijah, Isaiah, Jeremiah; Ezekel; Daniel; Ezra); Gospel book illumination; Gundä Gunde; 15th/16th cent.; fol. 18v; photo 2002, courtesy of Michael Gervers

('sanctuary', 9 m × 9.5 m), raised about half meter above floor level. Inside, there is a wooden carved and painted *mänbarä ↗ tabot* ('altar throne').

The main part of the building is preceded by a rectangular vestibule covered by a ceiling reposing on seven wooden squared pillars with carved and painted capitals. The vestibule is accessible by a double entry and narrows into two passages, along the north and south walls of the main building, that lead to the courtyard at the front of the eastern facade. The walls are pierced by rectangular and half-circular windows in the first and second order respectively, as well as by a number of small scattered openings. Long and narrow stone blocks, laid in regular rows with very little mortar, were used for the construction. Such details as the doors and windows framed with elaborated arches, horn brackets and traceries are carved in wood. Outside the walls, which encircle the whole monastic complex, there is another little church used for people arriving to G.G. for the celebration of the festivals (particularly the Assumption of 21 *Ṭər*; *↗ Ǝräfta*).

Many of the manuscripts preserved in the library are richly illustrated in a particular style referred to as the G.G. style, which flourished about 100 years from the end of the 15th cent. It introduced squat figures with extremely simplified bodies hidden under stylised garments in bright colours covered by geometrical, patchwork pattern. Their pear-formed heads with concave faces have characteristic elongated eyes, upward triangular eyebrows and small mouths. They appear in full-size illuminations often inserted as frontispieces to the texts, which are also divided and decorated by particularly elaborated *↗ haräg*-ornament.

The writings more often illustrated are: Gospels, Vitas of the Stephanites saints, the *↗ Gäbrä ḥəmamat*. The miniatures usually depict groups of saints and biblical figures displayed in rows, but seldom include narrative scenes. The favourite subject is St. Mary with the Child flanked by Gabriel and Michael. Besides a number of illuminated manuscripts which are still preserved in the monastery, examples of the G.G. style can be found in the following places: ↗ Aksum Ṣəyon; Däbrä Maryam Sawne; Śəllase Gudufru; Asir Matra; Mikaʾel Dära (Təgray); ↗ Gännätä Maryam in Lasta; Iyasus ↗ Gʷənagʷəna. The G.G. style applied also to ↗ crosses, decorated with figural carvings and chiselling, as well as to folded parchment strips (*↗ Sənsul*) and some of the most refined liturgical fans (*↗ Märäwəh*).

Alongside with manuscripts, the treasury of the church hosts a collection of liturgical vessels and devices, paintings on canvas from the 17th–19th cent., and a number of hand and shaft crosses carved in wood and decorated with metal inlay, all attributed to the Stephanite artisan and craftsman *abunä* ʿƎzra – who was also credited with the foundation of the monastery in a local tradition attested first by Mgr. De Jacobis (2000: 578f.; cp. Ricci 1953:67).

Manuscripts from G.G. are kept in both public institutions and private collections: Addis Abäba, IES nos. 242, 4433, 7008; Baltimore, The Walters Art Museum, w. 580 (Horowitz 2001: 104–07); London, Collection of Robert McCarthy; New York, N.Y. Public Library, Spencer Collection, SD 15168 (Fiaccadori 1994:102 n. 88); Parma, Biblioteca Palatina, Parm. 3834–58 [= Mordini 1–25] (Farinelli et al. 1994, cp. Fiaccadori 1994:102 n. 87); Munich, Statliches Museum für Völkerkunde, 86.307643–45; Città del Vaticano, VatLib, Combon. Aeth., some 20

pieces (listed in Raineri 2000:309). Apart from Mordini's mission, still the major source of information on G.G. and its library, considerable efforts in making the latter available to scholars were undertaken by Emilio Ceccarini (Raineri 1990 and 2000:VII, 302) and Roger Schneider (Drewes 2002:208), who photographed a considerable number of manuscripts.

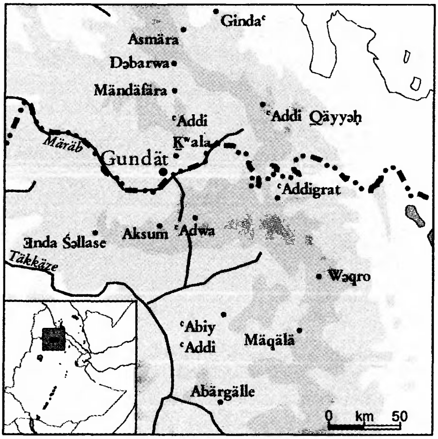
Gundät

G. (ጉንደት, also Gʷəndät) is a small village southwest of ↗ʿAddi Ḵʷala, in a steep valley near the ↗Märäb river. It was the site of a battle during the 1875–76 ↗Egyptian-Ethiopian war whose outcome was the annihilation of Egypt's dream of establishing a permanent presence in Ethiopia.

The causes of the battle lay in the Egyptian decision to deploy a 2,500-man army, under the command of the Danish Colonel Søren Adolph Arendrup (1834–75), to check Ethiopia's growing military power. After landing at Massawa on 26 September 1875, Arendrup assumed command of a 2,500–3,000-man force and proceeded inland.

On the night of 15/16 November 1875, Arendrup's army crossed the Märäb. In the early morning, an Ethiopian force attacked and killed about 800 Egyptians. A few hours later, the Ethiopians surrounded and then killed some 1,300 Egyptian soldiers at G., where Arendrup, together with several other prominent figures of the Egyptian army and administration (↗Arakel), also lost his life. The Ethiopians captured between 14 and 16 cannons and rocket stands with ammunition and between 2,000 and 2,500 rifles. Their losses included 521 troops dead and 355 wounded. Despite the fact that the Egyptian force possessed better weapons the Ethiopian army prevailed because of



superior battlefield tactics (mass attacks) and better knowledge of the local geography. Ethiopia's final major victory occurred on 7–9 March 1876 at ↗Gura^c. After these battles Egypt attempted no further inland expansion and confined itself to occupying some coastal areas.

Gur Amba

G.A. (**ጉር፡ አምባ**, also Guramba) is a locality in ↗Dämbəya, 39 km south-south-west from Gondär. It is a small settlement of agriculturalists with a well-frequented Saturday market.

During the 17th cent., in the reigns of *aṣe* Fasilädäs and *aṣe* Yohannəs I, G.A. appears as land tributary to the royal chapel, or Śə^{c}əl Bet. In founding the church of ↗Däbrä Ṣäḥay Q^{w}əsq^{w}am in Gondär, *ətege* Məntəwwab (↗Bərhan Mogäsa) endowed it with land at G.A. in support of the royal *täzkär*.

G.A. gained additional prominence as the site of an important battle between *ras* Kaśa Ḫaylu (future *aṣe* ↗Tewodros II) and the forces of *ras* ↗Ali Alula. Ali sent an army force headed by *däğğazmač* ↗Goššu Zäwde, Kaśa's former commander. Goššu Zäwde followed Kaśa for several months, manoeuvring through Aläfa and Çəlga till at last on 27 November 1852 the two armies met in a clash at G.A. Even though Kaśa had far fewer soldiers, Goššu Zäwde was killed, the remainder of his troops had to flee back to Goğğam, and Kaśa acquired a considerable amount of wealth and arms as booty. G.A. ultimately proved the first major step in Kaśa Ḫaylu's ascent to the imperial throne in February 1855, after two more resounding victories over Ali at ↗Ayšal in 1853 and *däğğazmač* ↗Wəbe Ḫaylä Maryam at Däräsge in 1855.

Bahru Zewde – Evgenia Sokolinskaia

Gura^c

G. (**ጉራዕ**) is a village and a plain near ↗Däqqämḥare in the ↗Əggäla region, ↗Akkälä Guzay. G. may originally have been the name of a northern highland ethnic group, which later (before the 15th cent.?) merged with the Əggäla, the G. village becoming their main settlement. This may also account for the appearance of the name Əggäla Gura^c in historical records. Tradition does not seem to include G. among the descendants of eponymous Akkälä and Guzay. Possibly related to the early southward migrations of northern groups after the fall of Aksum, the claim of the origin of the name Gurage from "G. of ↗Ḥamasen" (explaining it as Gura^c-ge, 'the land of G.', cp. ↗*ge*) enjoyed wide circulation and is attested in Gurage genealogies and in some other sources (s. BTafA 209).

The place is mainly known for the battle of G. which ended the ↗Egyptian–Ethiopian War of 1875–76. After the defeat of Egyptian troops at ↗Gundät and the death of ↗Munzinger in November 1875, an expedition of some 12,000 was sent to "defend the borders" of the Egyptian province of the East Sudan and the Red Sea (↗Habeš). The troops were put under the command of General ↗Muḥammad Rāṭib *bāšā*, assisted by General ↗Loring with some American officers, and Generals ^{c}Usmān Rifkī *bāšā* and Rašīd Rāṭib *bāšā*. *Ḫidīw* ↗Ismā^{c}īl attached his son Ḥasan to the expedition, intending to organize the occupation of the border areas including Ḥamasen, which was to be held until *aṣe* ↗Yoḥannəs IV acknowledged the Egyptian borders.

The choice of the local *baḥri nägaśi* (↗*Baḥər nägaš*) to submit to Egypt in early 1876, followed by submissions of other local chiefs, made the G. plateau a seemingly ideal place for Egyptian fortifications. The Egyptian troops ad-

vanced from ↗Massawa, and in the end of January Muḥammad Rāṭib *bāšā* set a fortified camp in the southern part of the G. plateau and fortified positions near Kayak̲or to the north. The partition of the army (7,700 and 2,500 of infantry respectively, with several squadrons of cavalry, artillery and rocket launchers) became dangerous, when Yoḥannəs, with more than 70,000 soldiers he had been able to rally in the north, advanced from the Maräb. The decision to reinforce the Kayak̲or camp, situated in better position, was taken too late, due the internal rivalry within the joint Egyptian-American command. While some 5–6,000 Egyptians were marching towards Kayak̲or on 7 March, the Ethiopian army appeared and quickly attacked. In their inconvenient situation, the Egyptians had no time to prepare or take little advantage from their better weapons. The co-ordination was poor, and Muḥammad Rāṭib *bāšā* was among the first to flee back to G. taking Ḥasan along. In a few hours the Egyptian columns were overwhelmed and fled in disarray, bearing heavy losses; only a few hundred reached the fort of G. safely. During the next two days, the Ethiopians were engaged in active firefight with the Egyptians entrenched in the fort. The latter was brought into critical condition, but not seized, and the number of Ethiopian casualties was high (estimated 5,000). On 10 March, Yoḥannəs withdrew, which first led to the mistaken news that the Egyptians had won the battle.

Subsequently, Cairo tried, for some time, to conceal the facts. Yet, at G. over 3,200 Egyptians were killed and more than 2,000 were captured, which necessitated negotiations for their release. Although some new forces were dispatched to Massawa after the battle of G., Egypt could not afford anything more than "cold war" and empty threats. Yoḥannəs, in his turn, did not want the continuation of the hostilities. Even though the peace treaty was only signed in 1884 (↗Hewett treaty), Egypt was never again to annex parts of YoḥannəsIV's realm, nor did it defend the "Egyptian province" when *ras* ↗Alula Ǝngəda's army went deep into its territory. Muḥammad Rāṭib *bāšā* left Kayak̲or on 10 September 1876.

In 1935, G. was chosen as a site for a huge airforce base to serve the Italian high command for the invasion of Ethiopia. Däqqämḫare benefited considerably from this (Guida 268).

Wolbert Smidt – Denis Nosnitsin

Gurage

Gurage languages

The ↗Ethio-Semitic languages (↗Čaha, ↗Ǝndägäñ, ↗Ǝnnämor, ↗Ǝnär [Enär], ↗Ǝža, ↗Geto, ↗Gogot [Dobbi], ↗Gumär, ↗Mäsqan, ↗Mäsmäs, ↗Muḫər, ↗Soddo [Kəstane], ↗Səlṭi ↗Wäläne, ↗Zay) spoken by the people of the G. (**ጉራጌ**) region are categorized under the term G. languages. This is primarily not a linguistically defined group, and the designation "Gurage" with reference to the languages suffers from the same inconsistencies as with reference to the ethnic-social communities. In the strict sense of the term, G. is the name of the people of the *Säbat bet* G. ('Seven Houses of G.') and Guragina (Amh. *Guragiñña*) would mostly designate the language of those people, in fact mainly Čaha, as Kəstanəñña is the language of the Kəstane, Səlṭəññä the language of the Səlṭi, or Zayəñña the language of the Zay speakers. Generally, however, the Semitic vernaculars of the region have often been referred to as a group, sometimes described as a dialect cluster, and G. (Guragəñña) does also refer to any speech-form of G. people.

Historical records

The earliest evidence of a language in the region like these southernmost representatives of Ethio-Semitic is from the 13th cent., as recorded by the Arab philologist Abū Ḥayyān, who visited the region and also wrote a grammar of the "Abyssinian language". The grammar has not been preserved, but in an Arabic grammatical treatise Abū Ḥayyān's Abyssinian is presented as having *iya* for 'I', *ata* for 'you' masc. sg., *inya* for 'we' and *mḫṭ* for 'strike', and the prefix-conjugation forms *ʾimḫaṭ-u, timḫaṭ-u, nimḫaṭ-u* (but *yamḫaṭ-u*), with base-initial *-i-* and with a final *-u* (ʾAbū Ḥayyān 230:19–23). These fragments can be recognized as representing East Gurage and are particularly similar to present-day Zay pronouns, *√mḫṭ (maṭä) and Jussive.

Linguistic research

Scholarly interest in G. languages began in 1878 and attracted learned linguists such as ↗Praetorius, ↗Mondon-Vidailhet, ↗Cohen and ↗Polotsky. Cohen was the first who began to map the various dialects and offered information about their characteristics and distribution. It was, however, Leslau who established G. studies on a linguistically solid basis, discovered new dialects, provided collections of original texts and grammatical descriptions of most vernaculars (Čaha, Ǝndägäñ, Ǝnnämor, Ǝža, Geto, Muḫər, Soddo, Wäläne, Zay), discussed the position of G. within Ethio-Semitic and the classification and distribution of G. tongues, made comparative studies of various features with relation to the ↗Cushitic substrata and published a three-volume *Etymological Dictionary of Gurage*. Hetzron provided some further specimens and new analyses and attempted a sophisticated genetic-genealogical classification. The history of G. studies is summarized in Hetzron (1977: 24–29) and Gutt – Hussein Mohammed (1997) for Səlṭi (an extensive study of Səlṭi by Drewes has mostly remained unpublished), Leslau (1994) for Wäläne, Leslau (1999) for Zay and Meyer (in PICES 14) for Zay and classification. New studies of various aspects of G. languages, some of them with linguistic-theoretical orientation, are represented in the collection of essays on G. ed. by Hudson (1996), broadening in a sense the horizons of G. studies.

Classification of Gurage languages

There is a general agreement *grosso modo* on largely dividing G. in three main branches. G. speakers would use the form of the 1st pers. sg. independent pronoun as the distinctive mark of such division, whether it is *əya*, as e.g. in Čaha, or *ädi* as in Soddo, or *anä*, as in Muḫər, but a consistent application of that criterion is not easily practicable. A mechanical adoption of this test has yielded a misleading division into (A) an *əya/əye* group, comprising Čaha, Mäsqan, Zay and Səlṭi, (B) an *ädi* group, including the Kəstane, and (C) an *anä* group, with Muḫər and Gogot (so Dənbäru Alämu et al. 1995:255). Another suggested division using as labels the forms of the

1st sg. personal pronoun came out with (1) the *ädi* group (North-Eastern G.): language of the Kəstane (Soddo, Aymällät) and Dobbi (Gogot) with some speech-forms (uninvestigated) attributed to the *Säbat sänga* [sic] *Mäsqan* and others, (2) an *anä – əye* group (Central G.): Səlṭi, Wəlbaräg and the other dialects of East-Gurage with the geographically northern Wäläne and Kokir, (3) an *əyya / iya* group (South-Western G.): dialects of the *Säbat bet G.*, naturally including Muḫər (Alämayyähu Näri 1993:145f.). The labelling with the pronominal forms is here confused, the position of some dialects seems erroneous, but the main groups are reasonably defined.

Cohen's classification was rather similar, dividing G. into (1) North-Eastern: Aymällät (*Kəstanəñña*, Soddo), (2) Eastern: Səlṭi-Wəlbaräg, with the geographically northern Wäläne, recognizing ↗Harari as also related, and (3) Western: Čaha, Ǝža, Gumär, Geto (Cohen 1931:100–03).

After the last few survivors of ↗Gafat speakers were discovered by Leslau and the structure of the language was more fully described (Leslau 1956), it soon became clear that Gafat and Soddo-Kəstanəñña belonged together (Leslau 1992:551–52; 1956:261) and that the classification of G. in general necessarily involved Harari and Gafat. Leslau also presented Zay as part of East Gurage (Leslau 1992:554–58; 1999:167–73). After close examination of various conflicting isoglosses, Leslau (1992:246–59) suggested the following classification: (1) North G.: Soddo (Kəstane), most closely related to Gafat, (2) East G.: the Səlṭi group, Wäläne and Zay, which belong together with Harari, and (3) West G.: Čaha, Ǝža, Ǝnnämor, Ǝndägäñ, Geto, with a subdivision of Muḫər, Mäsqan and Gogot (Leslau 1992:567). Features specific to G., which occur either in all the three main groups or in any two of them, were regarded by Leslau as proving that G. [with Gafat and Harari] can be isolated as a branch for itself, implying in a sense a Proto-G.

A sophisticated attempt to make a consistent and systematic genetic classification was made by Hetzron (1972; 1977). While he rejected the idea of Proto-Gurage, it will be found that he has recognized the very same three branches of (1) Northern G., (2) Eastern G. and (3) Western G. as all his predecessors did, with the identical division of dialects, except for Gogot and Muḫər, that were defined as Northern G. The Western group is further subdivided in greater detail. The general division in three branches, with Muḫər classified with the Northern G., has also been adopted by Gutt (1980:59, 85). A major factor in Hetzron's classification is his assumption that the suffixes marking independent affirmative indicative verb-forms in Soddo, Gogot and Muḫər (in his terminology "Main-Verb Markers" or MVM) were Proto-Semitic survivals, regarding the suffixes in Soddo and Gogot *yəläbs-u*, *yəläbsəmu-n* (also Soddo **läbbäsä-u* > *läbbäso*, *läbbäsmu-n*) and Muḫər *yəläbs-u*, *yəläbsəmʷə-tt* as cognate to Classical Arabic *yalbas-u*, *yalbasū-na*. Various degrees of maintenance, loss, survival or traces of MVM's are involved in Hetzron's classification in the definition of an (a) "Outer South Ethiopic" branch (= Northern + Western G.), in forming a (b) *n*-group and a (c) *tt*-group of "Outer South Ethiopic", in bonding Soddo – Gogot – Muḫər together in (d) Northern G., in separating Soddo – Gogot from Muḫər, in the definition of (e) Western G., in separating (f) Mäsqan from the rest of Western G., and in the characterization of (g) "Peripheral Western G." (Geto – Ǝnnämor – Ǝndägäñ – Enär) as against "Central Western G." (Ǝža – Čaha – Gumär – Gura). But the very supposition that the MVM's were Proto-Semitic is quite erroneous. They have clearly been recognized as copulas occurring in the area, which make in such paradigms verbal compounds (Goldenberg 1998a:463–77; 1998b: 303–06; 1996:93–97; 1999:213–21). A similar interpretation of such compounds, with emphasis on the focalizing function of the attached morphemes in Zay, has also shown that Hetzron's classification based on such supposedly survived MVM's is in fact untenable (Meyer in PICES 14, 1798–1808). Such constructions represent an areal feature also known outside Semitic (Tosco 1996:88ff. on copula-affixation as a mechanism of verb focalization). Hetzron's classification takes into account phonetic correspondences in spite of their weakness as criteria in classifying adjacent dialects. Delicate phonetic variations in *k*/*t*/*d* (borrowed) morphemes are involved in the internal division of Southern G.; also the neutralization of */*n*/ – */*r*/ – */*l*/ figures both in the definition of "Peripheral Western G." and in dividing "Central Western G." in two subgroups. After all attempts there remains the division of G. speech-forms that have been studied or mentioned until now in three main branches (even those with embarrassing conflicting isoglosses):

(1) North (or rather North-Eastern) G.: Sod-

do (Kəstane) [most closely related to Gafat];

(2) East (or South East) G.: the Səlṭi group (with Azärnät, Ǝnnäqor, Mugo, Wəlbaräg, Wəriro) in the territory of the "seven houses of Gogot" (*saʾapt gār gogot*), the isolated Wäläne (in the North) and Zʷay (in the East) [belonging together with Ha̱rari] (cf. Drewes 1960 6b);

(3) West G.: Čaha, Ǝža, Gumär, Gura, Ǝnnämor, Enär, Ǝndägäñ, Geto.

The exact status of Muḫər, Mäsqan and Gogot still remains mooted.

The reconstruction of a special branch of South-Ethiopian comprising East G. and ↗Amharic–↗Argobba because they share the Imperfect+*√*hlw* construction (Hetzron 1972 38ff.) is ill-founded. Such constructions these languages have in common with ↗Təgrəñña, ↗Təgre and ↗Gəᶜəz, and functional changes within the system are not innovations of any genetic-comparative value.

Some characteristics of Gurage languages

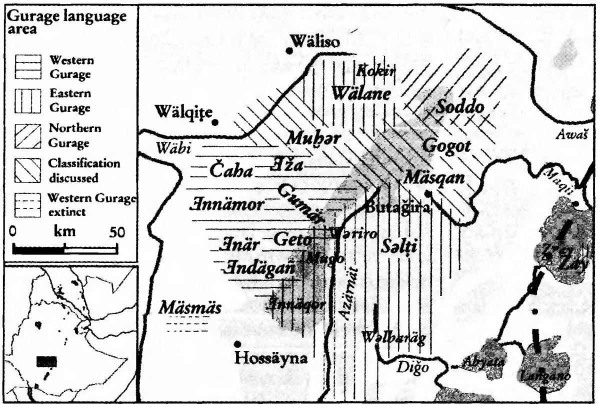
Several interesting traits of G., some of them areal and shared with non-Semitic languages and some possibly of comparative historical relevance, can here be mentioned briefly.

Well represented in all branches of G., as well as in Gaf̣at and Harari, is the use of an *m*-converb, also forming compounds with auxiliaries (Polotsky 1971:556–60; Hetzron 1972:105–15; Goldenberg 1998b:314–19). The general phenomenon of having serial and adverbative verb-constructions practically neutralized is common to Ethio-Semitic, and the occurrence of (1) the gerundial "verb 1 subordinate [+ verb 2]" and (2) the converbial "verb 1 + 'and' [+ verb 2]" as equivalent constructions is typical in Ethiopian languages, but "verb 1 + *-m*(*ä*)" converbs are not found in Ethio–Semitic outside the Gafat–Gurage–Harari area, e.g. Gafat *č̣irräshu-mä sällaʷh*, 'having finished I have come', Soddo [...] *balätt-m täsalättut*, 'she vowed to him saying [...]', Muḫər *xʷa täžäbbärä-m gäññ gäbba-m* 'he came back into the country', Ǝža *gäbba-m wäṭṭäqä-m* 'coming in he fell down', Čaha *tämṭäṭäsä-m näkäbom*, 'they found that it had been torn to pieces', Zay *ğiq bäl-əm həd*, "go slowly!", Harari *dukkən yikäfti-ma yiṭärgal*, 'he opens the shop and sweeps (it)'. *-má* in the same function is also found in Agäw (Hetzron 1972:93).

The converbial Perfect + *-m* is most probably the origin of the use of Perfect + *-m* as a main verb signifying the resultative present-perfect. Since it is typical for the present-perfect often to be followed by "and" with a statement of consequence (Praetorius 1879:370), the functions of converb and present-perfect are rather close. The clearest analogy to the process of converb becoming a sentence-final present-perfect is that of the gerund in Təgrəñña and in Goğğame Amharic. In Soddo, e.g., *mäṭṭa-m* is both a converb ('having come, he came and') and a present-perfect 'he has come'. The narrative preterite in Soddo is *mäṭṭa-w*. Present-perfect becoming a generalized past-tense form is known in G. as in many other languages.

A common innovation of Southern Ethio-Semitic was that root-patterning typical of the Imperfects, with gemination of the penultimate radical of strong roots, spread to the Perfect forms of "non-intensive" verb-stems. To the same phenomenon also belongs the spread of the palatal element – exponent of the "double gemination" in the "intensive" Imperfects – into the Perfect forms. This change is also recognizable in all South Ethiopian dialects where degemination took place later. In all branches of G. a conservative stage is represented, in which the negative forms of the Perfect have still escaped that innovation and remain the same as in Gəᶜəz or Təgrəñña (Polotsky 1971:483f.; Goldenberg 1998a:464f.; Hetzron 1977:87f.); e.g. Soddo triradicals 0_1 *läbbäso*, 'wear', negation *al-läbäsä*; 0_2 *zibbäro*, 'reply', negation *al-zäbbärä*; A_1 *aläbbäso*, 'dress', negation *al-albäsä*; T_2 *täqibbälo*, 'receive', negation *al-təqäbbälä*; quadriradicals 0_1 *sənäbbäto*, 'pass some time', negation *al-sänbätä*; A_1 *amsäggäno*, 'praise', negation *al-amäsgänä*; T_1 *tämsäggäno*, 'be praised', negation *al-təmäsgänä*; Ǝža triradicals 0_1 *säbbärä-m*, 'break', negation *an-säßärä*; 0_2 *žäbbärä-m*, 'reply' (variant *žäppärä-m*), negation *an-zäbbärä*, *čännä-m*, 'come', negation *an-tännä*; T_2 *täq'äbbärä-m*, 'receive' (var. *täq'äppärä-m*), neg. *an-tqäbbärä*; quadriradicals 0_1 *səräbbätä-m*, 'pass some time', negation *an-sänbätä*. In Zay as well, the root-patterning of A_1 *abäsälä-*, 'cook' [ʾ-*b-s-l*] discloses former gemination, and if the negative form is really *al-absälo* [ʾ-*bs-l*] (Leslau 1999:87), the same conservative stage as seen in North-G. Soddo and in West-G. Ǝža is also represented in East-G. Zay.

An innovation in the inflexional system itself, common to West G. and East G. (but not in Gafat and Soddo, nor in Harari) is the suffixation of *-nä* to the 1st pl. verb-forms of the prefix-conjugation (Imperfect and Jussive), e.g. Čaha



mitic and non-Semitic) of *u* and *t* as copula-forms besides the inflected *n*(*ä*). *t*-copula is mostly characterized as post-pronominal and is also found in Gafat and in Old Amharic. In G. all these copula-morphemes, differently positioned and variously distributed, are also found deeply involved, as auxiliaries, in the formation of verb-compounds as marking the independent affirmative indicative.

Phonological structure and phonetic characteristics differ from dialect to dialect and are treated in the individual entries, but the richness of phonetic variance of G. languages should be mentioned here. Especially West G. abounds with far-reaching deviations from all that is known elsewhere in Semitic, such as suprasegmental presence and transference of labiality, palatality and nasality, dissimilatory palatalization, neutralization of liquids **l* /**n* /**r* etc.

n-əbära-nä, 'we eat', *n-əbra-nä*, 'let us eat!'; Ǝnnämor *n-əkäftə-nä*, 'we open', *n-əkəftə-nä*, 'let us open!'; Muḫər *n-əsäbrə-no*, 'we break', *n-əsbər-nä*, 'let us break!'; Wäläne *l-əläqmə-nä*, 'we pick', *l-älqäm-nä*, 'let us pick!'; Səlṭi *l-ämsäk-nä* or *y-ämsäk-nä*, 'let us guide!'.

The use of 3rd pers. masc. pl. forms for the impersonal, or generic person, is rather common in various languages, but in West and North G., where 3rd pl. morphemes m.**-mu* / f.**-ma* replaced the old **-u* / **-a* in all the inflected verb-forms, reflexes of the old 3rd pers. masc. pl. forms in **-u* with the "heavy" object and mediate suffixes have created a special morphological category, formally distinct from other personal forms. This morphologically defined active verb-form, which obligatorily marks the direct or mediate patient but leaves the agent unspecified, is widely employed in those G. languages. Although a widespread usage of impersonal expressions does not necessarily depend on the availability of a categorially distinct form, the common use of the G. impersonal is typically connected with considerable reduction in the use of passive-reflexive stems. Cfr. the usual reference to a story by the impersonal "they say [it], one says" (= "it is said"): Ǝža *yəwri* (and similarly elsewhere in West G.), Muḫər and Gogot *yəbuyt*, or Soddo *yəblut* (Amh. usually T_1 *yəbbalall*); 'an X whom one calls N (= an X called N)': Čaha *N yəwri X*, Soddo *N yəblu X* (= Amh. *N yämmilu*[w] / *yämmilut X*, now more usually with T_1 *N yämmibbal X*), e.g. Soddo *Fäqadu yəblu säb* (= Amh. *Fäqadu yämmilu*(*t*) *säw*, or *Fäqadu yämmibbal säw*, 'a man called Fäqadu').

Typical to the area is the occurrence (in Se-

Writing

Except for linguistic transcriptions or sporadic missionary printing and some private attempts, G. languages were not usually written until the 1960s, and especially when in connection with decentralizing policies of the Ethiopian government, ethno-linguistic groups were urged and encouraged to form their own organizations and develop their local dialect as an expression of political and cultural identity. The Čaha New Testament was published in 1982 and various publications were then coming out (in Ethiopic script, with modifications), bulletins and periodicals, historical, social, economic and literary works. The first two G. novels (in Čaha) by Gäbrä Yäsus Ḫaylämaryam deserve to be specially mentioned, የጫሙት፡ ሽካ (*Yä-Çamut šəka*, 'The Trap of Çamut'; 1960 A.M. [1967/68 A.D.]) and አገኪ! ተኬትነት – አጂነት (*Agäki*! *täketənät – ağinät*, 'Agäki! From a maidservant to a respected housewife'; 1983 A.M. [1990/91 A.D.]).

Gideon Goldenberg

West Gurage

West G. is a linguistic grouping of G. dialects spoken in the western area of the G.-speaking region and includes ↗Ǝža, ↗Čaha (subdialects ↗Gumär and Gura), ↗Geto, ↗Ǝnnämor (Ǝnor) and ↗Ǝndägäñ (with subdialect Ǝnär). ↗Mäsqan, ↗Muḫər and ↗Gogot are also included in this group by some scholars (Leslau 1968), but Muḫər and Gogot are classified with ↗Soddo as Northern G. by Hetzron (1977). West G.-speaking groups are commonly known as *Säbat bet* ('Seven houses'), a tribal confederation that includes Čaha, Ǝža, Geto, Ǝnor, Ǝndägäñ, Muḫər and Maqorqor (Wärqu Nida 1992).

West G. has some sounds not found in other Ethiopian Semitic languages, namely "palatalized velar consonants": [k^y, q^y, g^y, x^y]. Ǝnor, Ǝndägäñ and Geto have contrastive long vowels (e.g., Ǝnor *käs* 'abdomen'/*kääs* 'debt') and nasalized vowels and sonorant consonants [*r̃*, *ß̃*, *w̃*, *ỹ*] e.g. Ǝnor: *də̃rãkärä* 'he threw'). Like Amharic, the G. dialects Ǝža, Muḫər, Məsqan and Ǝndägäñ have geminate or double consonants in the verb system (e.g. Ǝža: *säbbäräm* 'he broke'), except in the negative: *ansäßärä*. Geminate voiced consonants in verbs change to a single voiceless consonant (e.g. *bb*, *dd*, *gg*, *zz* > *p*, *t*, *k*, *s*) in Čaha, Ǝnor and Geto when followed by a sonorant [*r*, *ß*, *w*, *y*, *a*] (Banksira 2000), leaving alternations: Čaha: *säpäräm/yəsäßər* 'he broke/he breaks'. In Ǝndägäñ, geminates are voiceless in similar contexts: e.g. *säppärä* (Leslau 1976). West G. is known to have palatalization (i.e. *t* > *č*) or labialization (i.e. *g* > g^w), which in some cases marks grammatical categories, such as the 3rd pers. sg. masc. object, e.g. Čaha: *kətf*^{w}*ən*, or Muḫər: *kətəff*^{w}, 'chop it!' or the 2nd pers. sg. fem. subject, e.g. Čaha: *kəfč* 'open' (2nd pers. sg. masc. *kəft*) or *nəg*^{y}*əf* 'prune!' (2nd pers. sg. masc. *nəgəf*).

West G. (except Muḫər, Mäsqan, Gogot) has two future markers: definite (Čaha /*-te*/Ǝnor /*-k*^{w}*e*, *-te*, *-de*/) and indefinite (Čaha /*-šä*/, Ǝnor /*-se*/; Hetzron 1996). Other tense markers (or main-verb markers) include past /*-m*/, and in Muḫər and Gogot present-tense markers /*-u*, *-t*, *-i*/. Tense markers do not appear in the negative or in subordinate clauses. West G. has two forms of the jussive, the *yä-sßər/yäkəft* shape (with inserted [ə]) and the *yä-ßdär* shape. There is no plural marking or gender distinction in nouns. The masc./fem. distinction is found in the 2nd and 3rd pers. pl. pronouns, e.g. Čaha: *axu* 'you [masc. pl.]' /*axma* 'you [fem. pl.]', and the subject and object suffixes on the verbs.

Degif Petros Banksira – Sharon Rose

Gurage ethno-historical survey

The majority of the G. ethnic group is agrarian, constituting about 93 % of the estimated two-million G. population (CSA 1984). However, due to their traditions of urban migration and entrepreneurship, the G. constitute the third-most-urbanized ethnic group in Ethiopia, after the ↗Harari and ↗Dorze. Over half-a-million G. live outside their rural home regions. Those living in Addis Abäba numbered 255,000 in 1984 (2,000 in 1910), i.e. about 18 % of the capital's population and the second-largest ethnic group, after the Amhara. However, according to the 1994 Census, the G. (including the ↗Səlṭi) constituted the third-largest ethnic group, after the Amhara (48.3 %), and the Oromo (19.2 %), and 17.52 % of the city's total population (2,112,737).

The first mention of the ethnonym G. ("Geragi") is probably found in the Chronicle of *aṣe* ↗ʿAmdä Ṣəyon I. In Ethiopian ↗historiography two possible etymologies of the term G. are known. First, wide-spread oral tradition suggests that the word G. derived from a group of legendary ancestors led by *azmač* Səbḥat, who, probably during the reign of ʿAmdä Ṣəyon in the 14th cent., migrated from ↗Guraʿ in Akkälä Guzay, in today's Eritrea, to Aymällal, in the present-day northern G. region. Thus, the name G., meaning 'people of Gura', was used to refer to this group and their descendents. Second, G. is traced from a name given to the G. area combining two Amharic words: *gra* ('left') and *ge* ('side' or 'land'); hence, an area on one's "left side" when one looks at it from Gondär.

The G. ethnic designation has historically included different ethnic (sub-)groups such as: ↗Čaha, ↗Dobbi, ↗Ǝnär, ↗Ǝndägäñ, ↗Ǝnnämor (Ǝnor), ↗Ǝža, ↗Geto (Yäč̣erät), ↗Gumär, Mägär, ↗Mäsmäs, Mäqorqor, ↗Muḫər, Aklil (in southern Muḫər), ↗Mäsqan, Kəstane (also called ↗Soddo or Aymällal) and the Səlṭiñña-speaking groups (s. ↗Ǝnnäqor, Səlṭi, ↗Wəlbaräg) of Aliččo-Wəriro, Azärnät-Bärbäre, Daloča, Mälga, (Gän-)Səlṭi and Tora-Lanfəro. However, from a local point of view, G. has always excluded artisan groups such as the ↗*Fuga* (engaged in basket and wood works), ↗*Buda* (tanners) and *Nəfurä* (iron smiths), despised groups who for centuries lived among the G. and spoke their language.

The Čaha, Ǝža, Geto, Muḫər and Ǝnnämor established a confederation referred to as *Amməst bet* G. ('Five Houses of G.'). Some time after, with the admission of Ǝndägäñ and Mäqorqor, the confederation evolved into the *Säbat bet* G. ('Seven Houses of G.'). This confederation was established long before Gurageland was incorporated into the Ethiopian state in 1888, although the time for the establishment of the two confederations cannot be dated with full certainty (ShGurage 4, 205f.).

There are historical accounts of other political associations among the G. For instance, the Soddo established a kind of "pan-Soddo G." regional confederation known as the "Ǝnǧori Declaration [*sera*]", after the name of the place, Ǝnǧori in Nuranna, in order to avoid internal conflicts and to keep united against external threats. The founding members of this northern G., or Kəstane confederation, included the sub-groups of Amawute, Aratige, Damu, Gimise, Ǝndabuya, Ǝnagadir Zugan, Ǝskadiya, Kanz, Mälko, Nuranna, Wačo, Wagram and Zamute, as well as other sub-groups such as Adälä, Angatige, Aygado, Aymalalla, Dugda, Gotage and Qašitna Ambare.

The northern G. have taken different designations: Soddo, Aymällal or Kəstane. The term Soddo is an Oromiffa word, which may indicate a fusion of G. and ↗Oromo, implying also an intensive historical interaction with the neighbouring Oromo groups (the Dulla, Soddo, Ǧidda and Malima). Aymällal is the name of the place where the legendary migrant ancestors led by *azmač* Səbḥat are said to have settled first and is still the name of one of the Kəstane sections. The term Kəstane is probably linked to the northern G.'s conversion to Orthodox ↗Christianity, which could also be interpreted as a strategy for creating alliances with the Christian ruling group of the Ethiopian state at the time.

Furthermore, the ↗*Gogot* (Səlṭeñña: 'association') is to be mentioned. It is believed to encompass the entire (sub-)groups of the G. The initiative for pan-G. unity was taken by a certain Silla Odda, an influential man from Soddo G., some time during the 19th cent. This movement also aimed at avoiding internal conflicts and defence against external aggressions. Silla Odda is said to have been brought together influential figures of all (sub-)groups at a place located at the border between the Muḫər and Dobbi territories, where they established the *Gogot* as the first pan-G. union ever.

G. land is located in the south-western part of the former Šäwa province, about 200 km south and south-east of Addis Abäba. It is bounded by the ↗Rift Valley in the east and north-east and extends as far as Lake ↗Zʷay, if one includes the East G. language area. Natural borders are the ↗Gibe (Omo) river in the west, the ↗Wabi (Rebu) river in the north-west and the ↗Awaš river in the north. The southern border is roughly that of today's G. Zone. But parts of the Ǝndägañ also live further south among the ↗Hadiyya people. The G. have a long history of cultural interactions with their Cushitic-speaking neighbours, the Oromo in the north and east, the Hadiyya and ↗Kambaata in the west and south and their Omotic-speaking neighbours, the ↗Yäm. With these groups they share major elements of subsistence economy, such as the cultivation of ↗*ənsät* (G.: *ässät*), staple food-crop for the majority of about 20 million south-western Ethiopians.

The definitions of Gurageland have undergone some changes. During the imperial periods, as part of the former Šäwa administrative province, this area used to be administered under the two districts of Č̣äbo and G., and ↗Ḥayqočč and Butağira part of it (e.g., Ǝndägañ) was part of the Kämbata *awrağğa*. The *Därg* government reorganized G. into the new administrative units (*awrağğa*) Gumär, Čaha, Ǝža, Ǝnnämor and Ǝnär. After the *Därg* an ethnic-based policy was introduced and the earlier G. administrative structures were re-arranged. Gurageland was renamed first as "Gurage Region", with a status of regional state of its own for a very short period of time, and then its status was reduced to that of a zone within the Southern Nations, Nationalities, and People's Administrative Region.

Initially, the G. zone, its administrative capital being Wälqiṭe in Goru *wäräda*, consisted of eleven sub-districts (*wärädas*), including: Soddo, Kokir, Mäsqan and Maaraqo, Səlṭi, Lanfəro, Daloča, Gumär, Ǝža and Wällane, Čaha, Ǝnär and Ǝnnämor, as well as Goru. However, the number of *wärädas* was reduced. First, due to a (re-)definition of the Səlṭəñña-speaking communities as non-G., a new "politicized ethnic identity" has been assigned to the Səlṭe. As a result, a separate "Səlṭe Zone" consisting of the *wärädas* of Azärnät-Bärbäre, Aliččo-Wəriro, Daloča, Səlṭi and Torra-Lanfəro was founded. Due to the secession of the Səlṭe the ethnic and geographical meanings of the ethnonym "G." were modified. Second, the western G. sub-groups of Muḫər and Aklil, previously affiliated with Ǝža and Wäläne, established their own *wäräda* in 1999.

Ethnogenesis

There are three main versions of oral traditions about the origins of the G. One version, very popular and widely accepted, particularly in northern and western G., refers to the migration of Ethio-Semitic-speakers from northern Ethiopia led by the military leader *azmač* Səbḥat (s. above). From Aymälläl these G. ancestors expanded further south and south-west to populate the northern and western parts of traditional Gurageland. However, based on some linguistic and other evidence, this tradition has been questioned in that the first migrants from the north must have migrated much earlier. It is suggested that a wave of the first migrant G. ancestors must have been triggered by the exigencies of state control and Orthodox Christian evangelization during the 5th and 6th cent., when they were forced to leave northern locations. However, the legend of *azmač* Səbḥat has become a dominant part of G. historical accounts and may indicate waves of G. migrations from the north, including one led by the own *azmač* Səbḥat.

The second legend of origin holds that groups of speakers of East G. languages (today's Səlṭi, Wäläne, Gädäbano and Zay) came from the east. The Wäläne in particular are considered to be remnants of ↗Aḥmad b. Ibrāhīm al-Ġāzī's (Grañ) army. Others suggested that the (Gän-) Səlṭi and the Azärnät-Bärbäre came initially from Harär and Bärbära, whilst still others considered Arabia as the origin of these groups. Both stories of origin report that the current population is constituted also by mixing with indigenous peoples (of perhaps ↗Cushitic cultural background).

In general, G. society seems to have evolved from multi-directional and multi-destination migrations of Semitic-speaking peoples from northern and eastern Ethiopia to their present areas, and also due to their interactions with local peoples of mainly Cushitic-speaking cultural background. Some elements of the present G. might have both Semitic and Cushitic backgrounds, having migrated at different times and from different areas (Təgray, Gondär, Šäwa, etc., and Harär) independently and/or as parts of the military colonies established by the medieval kingdoms of Christian Ethiopia as well as the forces of Grañ. As a result of these interactions between the incoming northerners and local peoples, the G. not only intermingled with and adopted some cultural elements of local groups, but also maintained their own traditions, resulting in some Semitic-Cushitic demographic and cultural mixtures reflected in G. practices of *ənsät* cultivation, languages/dialects, religious belief-systems and ↗kinship-systems. However, the G. have developed distinct cultural identities of their own as manifested, among others, in village settlement patterns, architectural designs, language/dialects, and culinary traditions such as *kətfo*, which is a G. speciality that has evolved into one of the most popular national dishes (↗Food).

The conquest of G. by *nəguś* Mənilək of Šäwa (later *aṣe* ↗Mənilək II) is a historical fate that the G. share with many in Ethiopia. Initially, the G., save the Soddo sub-group, who submitted to Mənilək in 1876 without any resistance, fiercely resisted Mənilək's expansion. They fought to defend their independence and lands for 14 years since 1874, defeating Mənilək's forces in several battles. The fiercest and most important was that of Aräkit (in Gumär) in 1875, when the G., led by *agäz* (the highest traditional military title among the G.) Darsamo Kero of Gumär, had their enemy lose more than two-thirds of his soldiers suffering perhaps the most crushing defeat. The G. were finally defeated in 1888 at the battle of Ǧäbidu by Mənilək's forces headed by *ras* ↗Gobäna Dač̣i. This resulted in new structural developments, such as the ↗*näftäñña* – ↗*gäbbar* (landlord – tribute payer) relationships, with which most G. lost their lands to the Amhara-dominated *näftäñña* and became *gäbbar* on their own lands. This had far-reaching implications for both the G. and Ethiopia as a whole, for it sparked G. urban migration.

Material culture and economic practices

The three types of traditional G. circular houses are *goyä*, *härarä* and *zägär*. They are constructed of local materials, including wood (pine, ↗eucalyptus, ↗bamboo) and grass for thatching the roofs. Settlements are structured in rows of homesteads with public open spaces in-between. Behind such homesteads are fields with different crops, mainly *ənsät*. Such settlements constitute the densely populated G. villages, locally known as *ǧäfʷärä*. ↗Handicrafts with wood and bamboo, tannery, ironsmithonry and pottery are carried out by the artisan groups *Fuga*, *Buda*, *Näfurä*, *Yäšähiräwät*. Traditionally, these creative professions have been despised by the *wäläba*, so-called 'pure', G., whose respected profession is farming. Thus, except for some *wäläba* female potters and male wood-carvers, the *wäläba* have participated in the creative processes as consumers, but not as producers. Intermarriage between the *wäläba* and artisan G. groups was and still is considered unacceptable, although there are some instances of marriage that have broken this prohibitive tradition. G.'s attitudes toward artisans have changed over time due to migration and growing education rates.

Regarding the G. economy, farming, livestock-raising, trade and migration constitute the major survival strategies. Essentially sedentary agriculturalists, the G. cultivate *ənsät*, grow pulses and cereals and raise livestock. *Ənsät* is the staple food-crop; it is a very versatile crop and the plant's different parts are used as food, medicine, construction-material and raw materials for making objects such as simple dishes and sleeping-mats. Shack (ShGurage) defined south-western Ethiopia as the "ensete culture complex area", in contrast to the "cereal culture" region of northern, and mainly the livestock-raising economy of the eastern lowland peoples. However, the label: "ensete culture" in the title of his book misleadingly lumps the multiple ethnic groups together, overlooking the important diversity in cultural traditions and economic practices that are both associated with and distinct from the *ənsät* cultivation among these groups, the G. included. In addition, recent developments (mainly with the construction of modern roads) have promoted the cultivation of cash crops – including ↗eucalyptus trees and ↗*č̣at* – that have emerged as the most lucrative products of Gurageland.

Social and political organization

Traditionally, rural G. communities are organized on the basis of patrilineal kinship. Patrilineal principles of descent and inheritance constitute the main base of all social groups, including families, clan-based communities and territorial groups. G. kinship incorporated elements from both Ethio-Semitic and Cushitic-speaking peoples' kinship-systems, as they probably adopted the descriptive cousin terminology from Ethio-Semitic-speaking communities and the patrilineal descent-reckoning from Cushitic-speaking peoples.

G. kinship relations have constituted the main organizing force of their political organization. Traditional G. society did without a centralized state administrating all sub-groups of G. Rather, the G. developed their own traditional governance systems based on kinship and religious principles, each system emphasizing the local cultural characteristics of the sub-group of its origin. Despite local and/or sub-regional variations, essentially G. political cultures evolved through and revolved around the institution of *sera*, 'traditional law' (↗*seera*), which organized social life and established and maintained peace and order. In the G. context, the *sera* could be broadly defined as that of traditional law and of the processes and acts of making and enforcing them. Such political institutions include: the ↗*Yäğoka qiča* (or *Yäğoka sera* for the *Säbat bet*), *Yägordänna sera* (Soddo), *Yasəlṭe sera* (Səlṭe), *Yafaragazanna sera* (Mäsqan) and *Yadobbi sera* (Dobbi). The *Yäğoka* institution is an all-G. structure of governance bodies of the *Säbat bet* consisting of councils of elders that are established and exercise powers independently on political matters at all levels. Although patrilineal lineage-systems provided the major basis for their political units, territoriality is another important organizing principle. For G. political cultures worked at the intersections of kinship, religion, and location. This implies that the social, cultural, and even political borders of such clan-based political units are porous, as the G. always criss-crossed such boundaries through their inter-clan relations, including marriages, exchange of goods and services, common political concerns and ritual practices, which characterized G. clanship as a whole. It is vital to note that G. ritual practices are all-encompassing and pragmatic, forming strong bases for non-kinship relationships and helping the G. to achieve unity in diversity.

Urban migrations and entrepreneurship

Any report on contemporary G. society must incorporate migration and entrepreneurship. Not only have these experiences transformed the meanings of "being Gurage", or Gurageness, adding urban and entrepreneurial dimensions to their identity, but they are increasingly becoming the defining and constitutive elements of modern G. ↗ethnicity.

Oral traditions of G. urban migration are linked to their incorporation during the 1880s into the larger Ethiopian state, which transformed rural life by imposing the *näfṭäñña* rule and thus triggering G. urban migration, people initially migrating for corvee labour in Addis Abäba to generate the necessary cash to pay the tributes imposed on them. Developments like urbanization and improvement of transport facilitated urban migration (G.: *fanonät*), which brought remitted income and labour absenteeism. In its turn, remitted income has created economic and social differentiation among G. villagers, distinguishing migrant from non-migrant households in terms of possessions and ways of life. In addition, it has restructured family and gender relations in villages, G. women whose husbands migrated having taken up traditionally male-specific roles (e.g., heading households, caring for livestock). A distinct social group of migrant families with its own life-styles and values emerged and traditions of urban migration evolved into vital aspects of G. economic survival strategies, becoming a kind of sub-culture of G. village cultures.

Development activities (construction of roads, schools, health centres), mainly funded by remitted cash of urban G., constitute other major economic effects of urban migration on village life. Migrant G. have always maintained strong links with farm households. They have established several voluntary/development associations (↗*Ǝddər*) in order to promote the flow of cash via the expansion of internal and external trades, the commercialization of farm products (e.g., wood, *čat*) and intensified G. national integration.

Throughout Addis Abäba's history, the G. have constituted the city's main labour force as well as the business force of Märkato (↗Addis Kätäma). By the turn of the 20th cent., the name of G. in Addis Abäba was synonymous with the term cooli and people used to call for porters by shouting "Gurage!" In fact, the G. deservedly pride themselves as the main builders of Addis Abäba.

Until the 1950s urban G. were engaged mainly in menial and manual labour, petty trade, and as shop-keepers for expatriate traders (↗Yemeni Arabs, ↗Armenians, ↗Greeks, ↗Indians), who monopolized Ethiopia's commercial sector at the time. During the 1950s–70s, the G. succeeded in competing with and replacing expatriate entrepreneurs and nationalized the emerging capitalist entrepreneurial economy. With their strong work ethics and impressive entrepreneurial successes, the G. constitute a crucial component of the fabric of modern Ethiopian nationhood, entering its imagination, as manifested by the fusions of Gurageness and entrepreneurial success in public discourse.

Gurage religions

Traditional belief systems

The religious life of the G. people has been characterized throughout history by syncretism and religious diversity. Traditional belief-systems, Christianity and Islam have co-existed and competed with one another over followers and resources for centuries. G. traditional religions, constituted by belief in deities, predated Christianity and Islam, the different (sub)groups worshiping local deities: *Gordäna* in Soddo, ↗*Dämʷamʷit* (fertility goddess), ↗*Božžä* (thunder-god) and ↗*Waq* (sky-god) among the *Säbat bet*.

In pre-Christian times, the Soddo worshipped *Gordäna*, which was the main spiritual source for individual and collective commitments. The advent of Orthodox Christianity in the area and an increasing conversion of the Soddo G. to Christianity undermined the role of *Gordäna* and led to the substitution of the latter by the former. Christianity became one of the vital elements defining Soddo G. identity, which was locally redefined as Kəstane ('Christians'). However, despite this socio-cultural transformation, *Gordäna* continued to play an important role in the life of the Kəstane, being the religious fundament of the institution of traditional governance known as *Yägordena sera* (also *Yäʾənğori sera*).

After the advent of Christianity and Islam, deities such as *Dämʷamʷit*, *Božžä* and *Waq* continued to play a major religious role among the *Säbat bet* G. In Čaha *Dämʷamʷit* has two shrines, Yäbitara and Moqärär, where the ritual-dignitary also resides and the annual festival (*Sänčä*) is celebrated, mainly by female adherents and a few male leaders. However, *Dämʷamʷit* may be referred to as a pan-G. deity with adherents from almost all (sub)groups/regions of G. The cult of this female deity is headed by a male ritual-leader (*Yäwäy dämam* from the clan of Yäwaqəsäb). Although most of the adherents are women, men believe in her as well.

Božžä is another pan-*Säbat bet* G. god with its shrine in Yənangara (in Ənor), his annual festival being *Nəpʷär*. His cult is headed by a male ritual-dignitary from the clan of Əntäzära and it is believed to monitor social behaviour. *Waq* can also be seen as a pan-*Säbat bet* G. deity, but it is worshipped under different local names and at the various shrines of the (sub)groups, e.g., *Awägʸät* (Čaha, Gumär), *Ǝnggʸäbär* (Ǝža), *Ğäbär* (Ǝnnämor, Enär), *Mando* (Geto), *Yämʷarär* (Aklil) and *Yäsus* (Muḫər). Each of these *Waq* deities has a certain ritual-leader and an annual festival celebrated at his own shrine. *Awägʸät*, for example, with his two shrines, Yäbäzä and Wägāpäča (both in Čaha), is represented by a female ritual dignitary from the clan of Mazahur, together with her husband from the clan of Yənäqʷamt, who resides in Yäbäzä. His annual festival, *Čəšt*, is celebrated mainly by his male adherents at Wägāpäča. *Awägʸät* is believed to be responsible for ensuring justice, peace and order in the society. Ideas and ritual practices associated with *Awägʸät* constitute the religious foundation of the ↗*Yäğoka* pan-*Säbat bet*-G. institution of traditional governance. The subaltern minority groups in G., the *Fuga*, *Nəfura* and *Buda*, have their own religious beliefs and practices.

Christianity

Local oral traditions and some travel accounts indicate that Christianity might have a longer history than Islam in some parts of Gurageland. Muḫər oral traditions claim that Muḫər has been a Christian area since the Aksumite period. They also tell that during the reign of *aṣe* Yəkunno Amlak (r. 1270–85), *abunä* ↗Zena Marqos came from Bulga to Muḫər, where he stayed for 40 years renewing the already-existing Christianity and spreading it into other parts of G., particularly among the later *Säbat bet*. During this period, it is believed that he established some 156 churches in G. (including Muḫər, Čaha, Ǝnnämor, Ǝndägäñ, Wäläne and Soddo), most of which were destroyed by the campaigns of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"). Some of the oldest G. churches such as Gädam Iyäsus (Muḫər), Mədrä Käbd Abo (Soddo), Amanuel (Enär) and Mikaʾel (Ǝndägäñ) are considered to be products of this period.

Saints like Zena Marqos, ↗Gäbrä Mänfäs Qəddus and *aṣe* ↗Zärʾa Yaʿəqob hold vital positions in G. Christian oral traditions, which also give hints of an early 14th-cent penetration of Christianity. Besides, there have been long-established relationships between G. groups (especially Soddo, Muḫər and Zay) and Christian northerners.

The incorporation of the G. into the Ethiopian empire by *aṣe* Mənilək II in 1889 paved the way for the wide spread of Orthodox Christianity, as imperial state and church joined forces to exert influence on local groups. Existing churches were strengthened and a number of new ones were established in and around garrison towns (↗*kätäma*). These churches played a major role in legitimizing the emerging modern state based on the hegemonic Amhara/Christian cultural values, serving at once political, religious and educational purposes. This had a significant impact on G. traditional religions and ritual practices, changing the meanings and nature of Gurageness. As such, the term "G." was assigned to refer to those traditional believers ("pagans") who were neither Christians nor Muslims.

Catholic and Protestant missionaries' activities during the 20th cent. were among major forces that re-shaped Gurageness.

Islam

There is no documentation showing the exact time of the advent of Islam, but some traditions claim that it began to penetrate East G.-speaking groups (mainly the Səlṭe, ↗Səlṭi) during the 12th and 13th cent., a distinct period of Islamic expansion in Ethiopia that led to the emergence of several Muslim sultanates. The earliest known reference to G. Muslims is contained in a chronicle of the 14th cent.

Some factors contributed to the introduction of Islam: the action of Muslim merchants engaged in the east-west long-distance trade; the campaigns of Grañ, which weakened Christianity and traditional religions and left pockets of Muslim soldiers in the G. area; figures like *ḥağğī* Aliyye of Səlṭi and Ali Dänäbo, a warrior from the clan of Yäqotəb in Čaha. *Ḥağğī* Aliyye is believed to be the ancestor of most East G.-speaking groups and many G. (sub-)groups. Islamic oral traditions hold that he was an important religious leader coming from Arabia (some attribute his origin to Bärbära, others to Ifat). Ali Dänäbo accepted Islam under the guidance of *šayḫ* Yaruna Gošte in Səlṭi. He fought ritual practices related to *Dämʷamʷit*, introduced Islam to Čaha and facilitated the establishment of the ↗Qabeena Muslim state. This state emerged as a strong Islamic centre for *imām* ↗Ḥasän Ǝnğamo's revivalist movement, which, during the second quarter of the 19th cent., spread Islam among the G.

After the defeat of Ḥasän Ǝnğamo, Islam continued to expand. This was also due to the emergence of important Islamic centres and leaders such as *šayḫ* Budäla of Abrät (the "*šayḫočč*") in Ǝnnämor, *šayḫ* Issa (and his son, *ḥaǧǧī* Sulṭan) of Qatäbarä near Wälqiṭe and Yaruna Gošte of Səlṭi, as well as the mosques of Alkäso and ↗Butağira. Today Muslim G. follow the *Qādirīya* and *Tiǧānīya* orders (↗Islamic brotherhoods).

Today the G. population consists of nearly equal numbers of Muslims and Christians, as well as some traditional believers. G. traditional religions are still lingering and co-existing with the dominant religions, particularly in *Säbat bet* G. Communities are characterized by religious tolerance, manifested historically through intensive social interactions, consisting of both co-operation and competition, at all levels.

Gurgura

G. is the name of an area to the north of the Addis Abäba – Dərre Dawa railway and of a group inhabiting this area. The G. people are descendants of Nole Oromo. Once sold as slaves to the ↗ᶜIssa clans, they were settled on the piedmont of ↗Erär. The G. have two sub-clans, Libidor and Kutube; the latter gave birth to the ᶜIssa Gurgura Liberation Front (IGLF).

During ↗Ḫaylä Śəllase's reign the administrative borders in the area frequently changed. G. at most times formed a *wäräda* within the Adal–ᶜIssa–Dərre Dawa and Gurgura *awrağğa*, which extended as far as the lower Awaš valley.

During the time of the *Därg* (↗Provisional Military Administrative Council), the G. *wäräda* was part of the Dərre Dawa–ᶜIssa and Gurgura *awrağğa* with Gurgur as its capital. It was centred upon a relief, also called G.

Today G. *wärada* is one of the two subdivisions of the Dərre Dawa provisional administrative region. It has 113,672 inhabitants distributed over 1185.52 km² (i.e. a density of 95.1 inhabitants per km²). The capital of G. is in Mälka Ǧäbdu (13,672 inhabitants, CSA 2004).

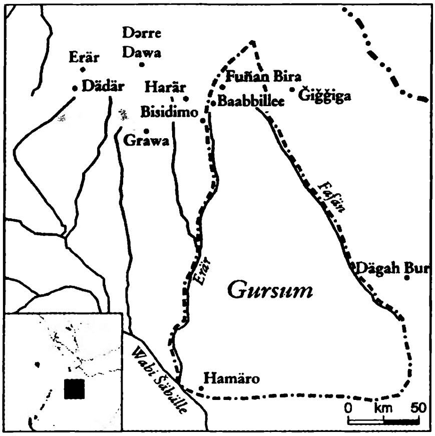
Gurra and Garri ↗Garre

Gursum

G. *awrağğa* was one of the subdivisions of ↗Harärge, until with the federal reform of 1991 its *wärädas* were divided between the Eastern Harär zone of Oromiyaa and the Ǧiǧǧiga and Fiq zones of the Somali *kəlləl*. G. stretched from Bisidimo and Baabbillee outside ↗Harär in the north to Hamäro on the middle ↗Wabi Šäbälle in the south. It was bounded in the east by the Fafän river and in the west by the ↗Erär. The capital of G. is Fuñan Bira (Somali: Funyaabirra; 14,089 inhabitants in 2003).

The highlands, which stand above 2,000 m A.S.L., are densely populated and are inhabited by the ↗Qottu Oromo, who cultivate terraces of millet and *čat*, which has replaced coffee due to its higher cash value. To the south, Somali pastoralists belonging to the Ogaadeen clans (reer Maalingur) live in the lowlands (1,000–1,800 m A.S.L.), which are covered by a clear bush. During the dry season (December to February), they remain within reach of the wells at Fiq and in April they head northwards along the Hamäro –Baabbillee track towards the mountains of Galča, where they spend the summer rains (Gallais 1989). The border between Oromiyaa and the Somali *kəlləl* follows the ethnolinguistic



boundaries between Oromo and Somali.

In 1977/78 a Somali military advance stopped half-way up the mountains on the edge of the Somali settlements. The population of the G. *awrağğa* (76,000 km²) has more than doubled between the 1970 (70,200 inhabitants; density 9.2) and the 1984 (181,631 inhabitants; density 23.9) censuses. This is probably the consequence of the 1977/78 war. After the fall of Mängəśtu, there were sporadic lingering fights, as testified by the lack of demographic data. If we total the 1994 census figures for the G. and Baabbillee *wärädas* of the East Harär Zone (201,609 inhabitants), the G. and Baabbillee *wärädas* of the Ğiğğiga Zone (98,041 inhabitants) and the Fiq and Hamäro *wärädas* (145,614 inhabitants), we find that the former division had a total population of 445,644 inhabitants. In 2003 the same operation gives the figure of 475,306 inhabitants according to CSA estimates. Densities show a contrast between the highlands (228.8 inhabitants/km² in the G. *wäräda*) and the lowlands (13.4 inhabitants/km² in the Baabbillee *wäräda*). The most recent estimate shows a stagnation of the demographic increase in the mountains. In the north the towns of Baabbillee and Fuñan Bira have a population of up to 15,000 inhabitants, further south Fiq has more than 11,000 inhabitants, while Hamäro has a mere 3,000. It is generally estimated that the population of the three towns has increased by more than 50 % since the 1994 census.

Guruz ↗Hairstyles

Ğūšah

Gärad Ğ. (جوشه), once governor of ↗Däwaro, was first a Christian serving *aṣe* ↗Ləbnä Dəngəl. While he served in the Ethiopian army, his son, Bišāra b. Ğūšah, a follower of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"), was killed during the campaign against the land of the ↗Maya archers early in 1532 (BassHist I, 40, 264f., II, 94, 361f.; ᶜAbdalqādir ᶜArabfaqīh 1974:45, 270f.). At the beginning of the battle of Wāṣil, on 28 October 1531, Ğ. changed sides and converted to Islam.

During the Muslim pillage of the monastery at Lake ↗Ḥayq on 6 December 1531, Ğ. showed Grañ how to build a raft from inflated cowskins. As Ğ. had seen some lake people in Ethiopia making what is called in their language *läḫa*, by means of which they ferry people across, he gave Grañ the advice to slaughter a cow, to skin it, then to make it into a water-skin and fill it with air. After he had ordered the Muslims to fasten the inflated water-skin, tied underneath it, they put nine water-skins under every raft, three at the front, three joined under the middle and three at the back, and Ğ.'s idea worked.

In April/May 1532, Grañ sent Ğ. to Däwaro, having appointed him governor of the province. After the battle of Zalla in July/August 1532, the vizier ᶜAddalī sent Ğ. to block the outlet of ↗Bale at Dārah. While he was on the road, they met a group of Christians descending the Bale road after just having crossed the Wabi Šäbälle. Unable to flee, they asked for mercy. Ğ. ordered them to lay down their weapons and took all of them captive, five generals along with 60 cavalry. Then he ordered all to be beheaded, except for a general called Faris, who was able to flee whilst all the other Muslims were engaged in killing the prisoners. Ǧ. himself beheaded the general (*al-baṭrīq*) Ḥağah and sent his head to Grañ in Ǧīna. Grañ had been cheated by Ḥağah when the latter sent him a messenger saying that he wanted to become a Muslim just to kill shortly after Grañ's own messenger and to flee to the lands of Bale. Overjoyed, Grañ prayed, gave the messenger and his companions matching garments of honour along with two golden bracelets, and held the general's head up in front of the Muslim army.

Ǧ. is last mentioned when Grañ leaves him with the *amīr* Ḥusayn b. Abī Bakr al-Ǧāturī in Däwaro, after the conquest of the Bale province by the vizier ᶜAddalī in July/August 1532.

Franz-Christoph Muth

Guummaa

G. was one of the earliest ↗Gibe states to be formed – in the second half of the 18th cent. – and the only one that produced a chronicle of its rulers (s. Gibe for map).

Information on the formation of G. is confusing and contradictory. A number of sources written between the 1840s–90s claim that the founder was a certain Adam, a Muslim trader from Təgray. The *Chronicle of the Kingdom of Gumma*, published by Cerulli, also makes Adam the founder of the state, but presents Adam, rather than as a historical figure, as Satan and an evil spirit (CerFolk 152ff.). All sources agree, however, that the founder of G. was a Muslim, a claim denied by historical evidence: the founder of the state might in fact have been a non-Muslim and the tradition of Adam invented in order to islamicize the founder of a dynasty that was the first to declare *ǧihād* in the name and interest of Islam in the Gibe region.

The state of G. emerged out of the power struggle between the war leaders of the Dagoye and Cirra clans, Sarbaroda and Ǧiilčaa. The latter, an able organizer and inspiring leader, was powerful in war, and quick in taking decisive action. The cunning Sarbaroda, who was unable to stop Ǧiilčaa's rise to power, came to terms with his formidable rival and underpinned their relation by giving him the hand of his daughter. However, the political marriage failed to unite the contenders to the throne of G. Sarbaroda was defeated and killed in a battle and Ǧiilčaa, a non-Muslim, became the first king of G. Ǧiilčaa would die shortly after under mysterious circumstances and was succeeded by his son ↗Ončo (1810–30s).

Ončo was the first Muslim king of G. and was most probably converted to Islam by Muslim traders from Təgray. However, despite his acceptance of Islam, he continued to practice traditional Oromo religion and it was only during the reign of his successor that Islam fully replaced traditional religion. Ončo Ǧiilčaa was remembered for his tyrannical rule and for involving G. in continuous war with all its neighbours. During his reign Islam spread in the kingdom, due largely to Abbaa Maano, king of ↗Gomma (1800–40), who sent teachers and preachers to G. and encouraged Ončo to establish schools and build mosques. Some of the royal children, including ↗Ǧaawe Ončo, heir to the throne, received a good Muslim education. The relationship between Abbaa Maano and Ončo was strengthened by the marriage of Ǧaawe Ončo to a daughter of Abbaa Maano.

The succession of Ǧaawe Ončo (1830–54) to the throne of G. provided the basis for the replacement of traditional Oromo religion by Islam. Abbaa Maano persuaded his son-in-law, not only to abolish the ↗*buttaa* festival, but also to patronize Muslim scholars and provide land to the *Qādirīya* and *Tiǧānīya* ↗brotherhoods. During the reign of his follower, Abbaa Dulaa (1854–79), Muslim pilgrimage to Mecca and Medina replaced the traditional Oromo pilgrimage to the land of ↗*abbaa muudaa* in southern Ethiopia.

It was one of the pilgrims from G. who in the early 1866 brought to Abbaa Dulaa a letter from the custodian of the tomb of the Prophet Muḥammad at Medina announcing the end of the world was coming and urging all the believers to fortify themselves in their faith (CecZeila 268f.; TrIslam 202). It was probably in response to this letter that G. declared *ǧihād* against non-Muslim Oromo. G., the fourth Gibe state to be converted to Islam, thus became the first to declare *ǧihād* in the name and interest of its new religion, forming a Muslim league for the purpose of imposing Islam on non-Muslim Oromo neighbours.

However, the Amhara invasion in the Gibe region brought such an ambitious goal to an end. In 1881, ↗Abbaa Ǧoobir, the king of G., declared a *ǧihād* against Amhara invaders and was killed in battle (Tesema Taʾa 1986:134). Interestingly, even after the Amhara occupation of the Gibe region, G. remained a flash-point for resistance, such as the revolt organized and led for years by ↗Firrisaa (CerFolk 46).

Guzara ↗Gubaʾe

Gʷalʿa

G. (ጓልዓ) was a district with a few scattered hamlets 3 km east of the town of ↗ʿAddigrat. In January 1844 Giustino De ↗Jacobis passed there on his way to the monastery of ↗Gundä Gunde. A local Gälawdewos and his wife Mäqdäs cordially received him and it was recorded that, when leaving the hamlet, the priest said: "Lord, grant me a place like this!"

After they had spent months looking for a place to settle down, the son of Gälawdewos, *abba* Täklä Haymanot, a former monk of Gundä Gunde, suggested that they should try to purchase land at G. Negotiations were concluded on 10 December 1844 and the peach-orchard and one third of the water passed to De Jacobis at the cost of 100 Maria Theresia Thalers. By 1845, the local Ethiopian church of St. John was transferred to the Catholic mission, while a new house for the latter, with a seminar and a chapel both devoted to the Immaculate, and a school for girls and boys were established. The latter is credited with being the first school in Ethiopia to follow a "modern" curriculum.

The Capuchin Guglielmo ↗Massaja, who arrived at Massawa on 19 December 1846, was in G. a few days after. During his stay, he ordained 25 Ethiopian priests, 13 being married and 12 celibate. Although the ordinations were performed according to the Latin rite, it was understood that they would exercise their ministry in the Ethiopian rite.

In the following 69 years on no less than 15 occasions the people and priests of G. were subjected to vexations, persecutions and the destruction of their church and property. Often the local authorities forbade Catholics to graze their animals on communal land, draw water from the well, cut firewood or be given employment. As a result some families took refuge either in Alitena or Monoḫoyto. Despite the years of harassment the people preserved their faith. Today, the first Catholic church of modern times in Ethiopia has been restored and dedicated to St. Justin De Jacobis. There is also a kindergarten and a primary school, a retreat centre, a community of sisters and a seminary for candidates to the priesthood.

Gʷangul

G. (ጓንጉል, or Gʷangʷəl, Oromo sp. Guwaanguul, horse name "Abba Seru", often referred to as "Seru Gʷangul"; d. ca. 1777) was a political leader active during the very beginning of the ↗*Zämänä mäsafənt*. His base was the territory of ↗Yäǧǧu. G. founded the dynasty that in ↗Wällo traditions is called Wärräsek and in the literature is often referred to as the Yäǧǧu dynasty, which dominated Ethiopia for over 50 years.

G. was known to his contemporaries and to later chroniclers as a "Galla", indicative as much of his ambiguous relationship to Christianity as of his ethnic origin. Local tradition in Yäǧǧu also reflects this ambiguity, although it also records that the earliest church in the district, Galla Giyorgis, was founded in G.'s time, apparently by one of his brothers. Son of a petty Wällo lord Abbəyye "Abba Getəyye", G. reportedly claimed descent from one of the generals of ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ), a certain *šayḫ* ʿUmar. He married *wäyzäro* Gälläbu, daugther of *ras* Färis of ↗Lasta and Säläwa, which gave him land rights in Lasta. Of their children, ↗Ali Gʷangul (later *ras* Ali I, also Ali "the Great") became a powerful king-maker; ↗Aligaz, too, achieved the status of a *ras* (his children Bərru Aligaz, Färis Aligaz and Goğe Aligaz also rose to a relative prominence during the later years of the "Era of the Princes"). Käfay Gʷangul is equally remembered in Yäğğu today, mostly as mother of *ras* ↗Gugsa Märsa "the Great". Another daughter of G., Anqʷalit, was married (by Ali) to *ras* ↗Ḫaylu Yosedeq of Goğğam.

G. first entered the historical record at the beginning of 1766 when he, after negogiations conducted by *ras* ↗Mikaᵓel Səḥul, returned to ↗Gondär the royal crown, lost by *aṣe* ↗Iyasu II during a military expedition to ↗Sinnār. Mikaᵓel handed over the crown, which he received from G. on 23 March 1766, to the Emperor ↗Iyoᵓas on 2 January 1768.

Later G. appears in the chronicles fighting the Oromo in ↗Təgray on the side of *aṣe* ↗Täklä Giyorgis I, who also appointed G. ↗*šaläqa* in 1783. The following year, however, his son Ali was appointed *däğğazmač* of Bägemdər, indicative of G.'s political eclipse. Traditions in Yäğğu speak of armed conflict between G. and his son. James Bruce describes a visit by G. to Gondär, an account that is a caricature rather than an accurate sketch and is not to be taken seriously, although it may reflect attitudes of members of the imperial court towards G.

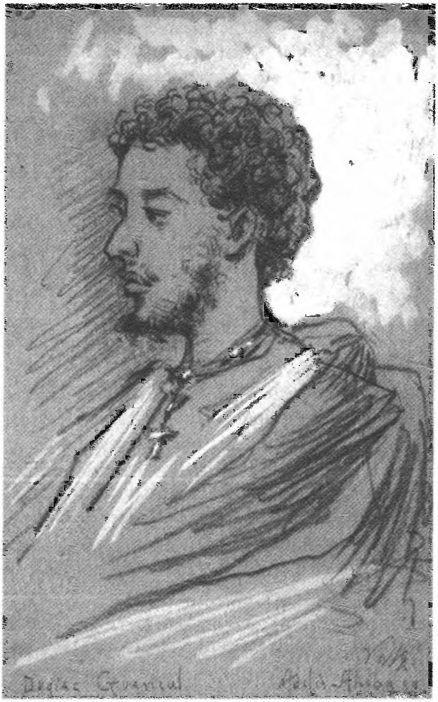
Donald Crummey – Red.

Gʷangul Bərru

Wag šum G.B. (ጓንጉል፡ብሩ, d. 1905, Addis Abäba) was a military lord and a son of *wag šum* ↗Bərru Gäbrä Mädḫən. In good relations with *aṣe* ↗Mənilək II, in 1889 G.B. was appointed governor of Ambassäl with the title of *ğanṭərar*. He held this office until his appointment over Wag with the title of *wag šum* in June 1895 after his father had been removed from office and imprisoned because of contacts with the Italians.

In September 1895 G.B. was ordered to mobilize his forces into Təgray. Italian sources indicate that he had between 10,000 and 11,000 firearms, indicating a fairly well-equipped army. His army saw action at ↗Ambalage on 7 December 1895, next to *ras* Mängäša Yoḥannəs. At the battle of ↗ᶜAdwa G.B. fought on the Maryam–Šawito front, facing, together with other Ethiopian commanders, the right wing of the Italian army commanded by General ↗Albertone. He captured about 400 Italian soldiers and according to Mənilək's chronicler was instructed to take the captives with him into Wag before the return of the Emperor to Šäwa.

After the battle, G.B. was opposed by his powerful brothers for his earlier collaboration with Mənilək, who despite a promise of release was keeping their father in detention, a fact that also disappointed G.B. himself. As G.B. was the most colourful nephew of *aṣe* Täklä Giyorgis II, Mənilək began to suspect that he aspired to the throne. In 1905 G.B. was summoned to Addis



Drawing of "*däğğač* Gʷangul", Addis Abäba 1890; courtesy of Enrico Castelli

Abäba and put under house-arrest. Soon afterwards he died under mysterious circumstances. His father also died suddenly on receiving news of the death of his son.

Wudu Tafete

Gʷäšən

G. (ጐሽን, also Gošən; d. 1587, Wärq Amba, Səmen) was a ↗Betä Ǝsraʾel leader. In 1586–87, he led a hopeless raid in ↗Wägära against *aṣe* ↗Śärṣä Dəngəl. The belligerent attempt to retain control of the region ended with the captivity of hundreds of Betä Ǝsraʾel, the massacre of a number of them and the enslavement of women and children. In the last battle, on the 21 *Ṭərr*, G. and some 50–60 of his supporters preferred to commit suicide by throwing themselves off a cliff rather than to submit to the Christian Emperor.

According to some sources, as well as Betä Ǝsraʾel informants today, G. was the brother of the more successful leader ↗Gedewon. He might also have been brother of Śärṣä Dəngəl's mistress, *əmmäbet* Harago (or Harägʷe), by whom the Emperor fathered four sons. There are also some suggestions that both G. and Gedewon were brothers of the two Betä Ǝsraʾel commanders, Raday (↗Rädaʾi) and ↗Kalef, who tried to wage earlier wars against Śärṣä Dəngəl in the Səmen mountains in 1580 and 1582–83. They were, however, crushed by the Emperor (CRHist 96–100, 102–09 [tr.]). The Scottish traveller Bruce relates that G. was finally defeated on 19 January 1594, and 4,000 Betä Ǝsraʾel soldiers died in his campaign.

Shalva Weil

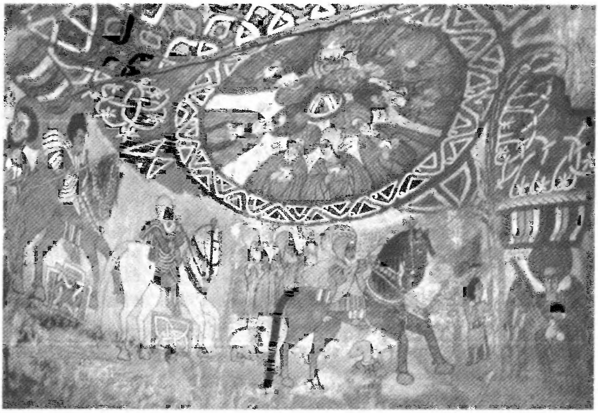
Gʷəḥ

G. (ጕሕ, also Guḥ) is a mountainous area with characteristic perpendicular rocks, situated close to the northern tip of the ↗Gärʿalta massif, about 12 km south-west from ↗Ḥawzen (s. map for Gärʿalta). A monastic community which once flourished there was established by *abba* ↗Yəmʾata, one of the ↗Nine Saints. According to tradition, he arrived to Ethiopia from Qosəya(t) (possibly a corruption of [al-]Fusṭāṭ near Menfi in Egypt, Conti Rossini 1897:175; Guidi 1894:61). The church, cut in the middle of a tall rock, is presently dedicated to him and is thus known as [Abba] Yəmʾata (Gʷəḥ Yəmʾata, Yəmʾata Gʷəḥ).

The church, accessible after a difficult climbing, can be approached by a narrow ledge going along the south wall of the building, with a drop off over 300 m to the valley. The partly weathered wall is repaired with stone blocks. At the end of the ledge there is a round cell containing two open graves. Another one, also with graves is cut in the adjacent cliff 100 m below.

The relatively small (ca. 10 m x 9 m x 3.5 m) church is oriented. Four cruciform pillars divide the interior into three equal naves and nine bays. Heavy curtains screen the eastern section serving as the sanctuary. It is enlightened by a single window, cut in the eastern wall and visible from outside. The ceiling above the central bay is formed as a shallow oval dome while these above the western bays, middle and north, are circular and almost one meter deep. The single entry to the church, in the south-west corner, leads directly to the south-west bay, which serves as the vestibule.

The whole accessible area inside the church is covered by wall paintings. The main scene is displayed on the walls of the north-western bay and represents *abba* Yəmʾata on a horseback, preceded by a young armed attendant and followed by the hermits Kiros and Matthew, an anonymous ecclesiastic on horseback and a young rider. A lion, a cock and a cynocephalous figure around the horse of the saint most probably come from the narrative of his Vita, still unpublished. In the dome, the remaining eight of the Nine Saints



Abba Yəmʾata on horseback and the "Nine Saints"; wall-paintings, 16th cent.; cupola of Gʷəḥ Yəmʾata; photo 2002, courtesy of Michael Gervers

are depicted. Two more anonymous monastic figures are represented on the southern pillar. Another thematic group includes figures from the O.T.: six patriarchs in the central oval dome and the prophets distributed on walls and pillars. The N.T. is evoked by the twelve Apostles, nine of them in the dome of the central-western bay, and by St. Joseph on the north-west pillar, facing St. Mary with the Child. The archangels Michael, Gabriel and Afnin as well as the martyrs Abib, Mamas and Esi complete the programme. A frieze of geometrical and vegetal motifs is enhancing (or imitating, as in the north-west dome spandrels) the architectonic elements.

Short prayers in which a certain Bənyam is mentioned accompany the images of *abba* Yəmʾata, the martyr Esi, St. Mary and the Apostles. Bənyam certainly was an abbot of the local monastic community and possibly the donor of the wall-paintings, dated to the beginning of the 16th cent. on iconographic grounds (Balicka-Witakowska 2003:362). Their style, very distinctive in spite of several repaintings, can be compared with that of the original murals at ↗Yädibba Maryam in Dawənt, Wällo.

Gʷəlt

G. (**ጕልት** or **ጉልት**, *gult*) is a concept fundamental to historic Ethiopian land tenure. It is usually understood as over-rights, the rights to tribute and rent, which the historic Ethiopian ruling class held in land. It contrasts with, and was often complementary to, ↗*rəst*, the inherited rights to agricultural land held by many Ethiopian farmers. Most recently, however, Habtamu Mengistie has established that the 19th-cent. grants of G. to some of the major churches of Goǧǧam displaced pre-existing *rəst*-holding farmers and gave to the receiving institution, and to the individual, who held it on the church's behalf, property rights to the land itself. The terms G. and *rəst* were frequently juxtaposed. In 1856 a chronicle tells us *nəguś* ↗Tewodros "gathered first his soldiers and then the churchmen with respect to *rəst* and *gʷəlt*" (CRNuov 412). They could be used as a byword: "How", *nəguś* ↗Täklä Haymanot declaimed a century and a half earlier, in 1708, "may one change your faith by proclamation, like *rəst* or *gʷəlt*?" (BassÉt 58 [text] = 169 [tr.]).

G. is a nominal form derived from the verb **ጐለተ** (Gəʿəz *gʷällätä* or *gʷälätä*; KaneDic 1893f.; Isenberg 1841:171; d'Abbadie 1881:815; DillmLex, col. 1139; GuiVoc, col. 707; BaetDic, col. 1055; LesDic 192; Amsalu Aklilu 1986:294). The verb is most commonly rendered as 'to grant a fief'; whence the meaning of 'fief' for G.

The principal historical treatments have been by Taddesse Tamrat (TadTChurch 98–103), Berhanou Abebe (1971:22–33), and Crummey (CrumLand passim). Taddesse Tamrat, with primary reference to the 13th and 14th cent., perceived the origins of G. in the conquest by the Ethiopian state of new territories and peoples and the alienation of pre-existent local rights in land in favour of military and civil agents of the state. For him, G. was closely tied to, and supportive of, administrative functions. Berhanou Abebe, by contrast, concerned himself with property relations during the reign of Mənilək II (1889–1913). He construed G. as a property right in land, but a rather narrow one in which the state granted some of its rights to private individuals. Crummey concurs in seeing G. as a property right in land, notes that the term has a generic meaning as evinced in the historic documents, and stresses its social character and the ways in which private individuals arranged for its transfer within and across generations (CrumLand 8–13 and *passim*).

Primary documentation of grants of G. begins in the 13th cent. in two remarkable collections of marginalia in Gospels from the monasteries of ↗Däbrä Libanos of Šəmäzana, in southern Eritrea, and ↗Däbrä Ḥayq Esṭifanos in Wällo (CRDLib; ms. EMML 1832). The former contains records of numerous grants dating to the 13th and 14th cent., some attributed to the Zagʷe ruler ↗Lalibäla. The Ḥayq records, while starting later in that same century, run down into the 16th cent. A third compendium of G. records commands attention: those contained in the manuscript originally published by Conti Rossini (CRAxum) and subsequently in English by Huntingford (HuntLand). Both the Däbrä Libanos and Aksum manuscripts contain records ostensibly dating from as early as the 4th cent. and the reigns of ↗Abrəha and Aṣbəḥa (documents 1–6 in both CRAxum and HuntLand). While these documents may reflect the origins of G. in antiquity, their authenticity is more difficult to establish than that of the burgeoning literature of the 13th and 14th cent., which also appears as marginalia and end material in manuscripts principally devoted to other purposes (for a discussion of the authenticity of the earliest grants and comprehensive listing of all known grants of G. from 1200 to 1540, s. CrumLand 24 and tables 1 and 2 in the appendix to ch. 1). Although rich, this documentation is undoubtedly skewed, since, with very few exceptions, it records the grant of land to and on behalf of churches, leaving no account of the numerous grants in support of military and other civil activities (ms. EMML 3389: Four Gospels from the church of Märṭo Mikaʾel, Gubbalafto, Wällo, is remarkable for the number of secular grants it records).

Granting of G. seems one of the most characteristic acts of the Solomonic rulers (and their late Zagʷe predecessors) and is an important source of continuity in the social and political spheres running from the 13th through into the 20th cent. The extant grants were most conspicuously for the founding of royal churches, that would serve, during the founder's lifetime, as sources of support; and following their deaths as tombs (DerDom ch. 6–7). Particularly well known are the grants of *ətege* Məntəwwab and *aṣe* Iyasu II founding the churches of ↗Qʷəsqʷam and ↗Narga Śəllase. The Qʷəsqʷam grant, in turn, was to serve as amodel for later foundations down into the late 19th cent. To be sure princely donors did not neglect older, established institutions and granted, or re-granted, lands to the church of Aksum as well as to the northern monasteries associated with the Nine Saints and the monasteries founded in Amhara, Goǧǧam, Šäwa and the environs of Lake Ṭana during the great revival of the 13th and 14th cent. In the 18th and earlier 19th cent. there is an unusually rich documentation of individual participation in the holding and manipulation of G. While land was given as G. to churches, it was often held, on the church's behalf, by individuals, who, in return, performed service functions for the church. Those individuals, in turn, gave their G. to others, sold it, and bequeathed it (CrumLand, ch. 5, 7, 8). In the later 19th cent. G. played a prominent role in the efforts by *aṣe* ↗Yoḥannəs IV to reconstruct the historic empire through the founding of churches (CrumLand 210–15). G. land, held in this way on behalf of churches by individuals, was often known as *rim*.

G. continued to be held in time-honoured ways down to 1935. The occupying Italian authorities were the first to attempt to eradicate G., but their efforts proved ephemeral (Haile Mariam Larebo 1994:240ff.). The restored state of ↗Ḫaylä Śəllase I, however, from its first edicts on taxation and church lands in 1941 and again in 1944 began to modify the context in which G. was held, and moved, inexorably, to its abolition in an edict of 1966 (CrumLand 234–44).

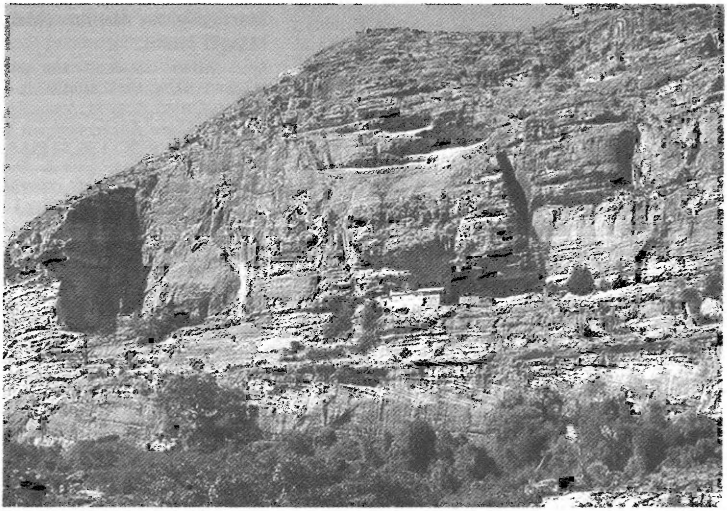
G^{w}ənag^{w}əna

G. (**ጕናጕና**, also sometimes **ጉናጉና** Gunaguna, lit. Tgn. for ↗*ənsät*) is a site on the border between Šəmäzana, Akkälä Guzay (Eritrea), and ^{c}Agamä (Təgray), 22 km from ↗Mäṭära (s. map for Gundä Gunde). The oldest name of the place, according to Ullendorff (1945:78, 1951:31), was "Aw^{c}a ʾIlfi", as it can be read in the inscription of the obelisk of Mäṭära (RIÉ no. 223:3–4; but s. Fiaccadori 2004:129, 155). Nearby, along the steep slopes of a mountain, there is the old church of Ǝnda Maryam (Mordini 1941) or Ǝnda Mäsqäl (Ricci 1953:19) of G., which is connected by local tradition to King ↗Gäbrä Mäsqäl; two rough wall paintings have been recorded there (cf. Ricci 1953:19, figs. 16–17; Godet 1980–82:92).

The oldest mentions of G., in the "Golden Gospel" of ↗Däbrä Libanos of Šəmäzana, are probably spurious (cf. CRDLib nos. 1, 5, 25). The Acts of *abba* Libanos (Conti Rossini 1903:



The church of G^{w}ənag^{w}əna, lying against a steep rocky wall; photo courtesy of Marilyn E. Heldman

28, 31f.; Bausi 2003, §§ 134ff., 146, 154) know G. as a dwelling place of the Saint, as well as a monastery with a church dedicated to the Holy Cross (Betä Mäsqäl), endowed with ↗*gʷəlt*-land by King Gäbrä Mäsqäl and entrusted to *abba* Adḫani/Mädḫani, a disciple of Libanos. G. is also mentioned in the Miracles (*Täʾammərat*) of Libanos (Bausi 2003, § 454).

The treasury of the church of G. boasts of some old manuscripts, among which a Gospel book written by a certain Gäbrä Krəstos and dating to the time of ↗Dawit II (cf. Bausi 2003:xxviii, n. 22 [tr.], from pictures by Marilyn E. Heldman; for a miniature of St. John the Evangelist from the same manuscript, s. Heldman 1994:100, fig. 56). On visiting the church in 1937, Antonio ↗Mordini acquired the carved wooden door (the oldest known in Ethiopia and Eritrea), and shipped it to the Museo Coloniale of Rome, later Museo Africano, where it is currently preserved.

Alessandro Bausi

Gʷənṣ

G. (ጕንጽ, also ጕንጥ Gʷənṭ, ጕጽ Gʷəṣ, ጕጥ, Gʷəṭ) is a locality in the district of ↗Käsäm in northern Šäwa, which acquired its notoriety in the medieval period as a place of harsh imprisonment and banishment of state offenders. Emperor ↗ʿAmdä Ṣəyon I imprisoned there *abunä* ↗Filəp̣p̣os of Däbrä Libanos, one of the monks who chastized him for taking his father's concubine (Kur 1968:10). In the 15th/early-16th cent., G. is reported to have been the place used by *aṣe* ↗Zärʾa Yaʿəqob for torturing the *däqiqä Ǝsṭifanos* (↗Stephanites) and other offenders (Conti Rossini 1910:25). G. was the place where *aṣe* ↗Bäʾədä Maryam punished the palace people who complained about his dereliction of his state duty (PerZarY 129), and ↗Naʿod, one of his officers, for an unspecified offence. The prison itself was called *betä mäzagəbt* (lit. 'store house'?) and was described as *məḫyakä mälaʾəkt* (lit. 'a place where officers are chewed'?; Caquot 1961:87). *Gʷənṣ*/*gʷənṭ* is definitely related to Amharic *gʷənč̣* 'cheek' – part of the body where food is chewed. Both the name of the locality and the description of the prison house as "a chewing place" speak about the level of torture which the offenders who were sent there had to suffer. G. was most probably a small hamlet in a deep gorge, cp. the resemblance of the name to the original meaning of "gorge".

In Käsäm, there is a locality which up to this day is called *Gʷəč̣*, with a church dedicated to Mary, *Yägʷənč̣ Maryam* (Maḫtämä Śəllase Wäldä Mäsqäl 1968:121).

Getatchew Haile

H

Hab Śəllus

Däǧǧazmač H.Ś. (also Habtä Śəllase, Ab Śəllus, b. Ṣälale, d. 6 September 1704) was a 17th-cent. ruler in ↗Märäb Məllaš. His parents were the local chief *käntiba* Gärä [Gäbrä] Śəllase of Ṣälale, son of Täsfallase, and *ətiye* Märᶜatä Ab (KolTrad I, A67, A84).

According to legend, H.Ś., wishing to obtain the *nägarit* of ↗Ḥamasen (which was in the hands of his cousin Ǝmməḥa, son of *käntiba* Gärä Ḵəstos [i.e. Gäbrä Krəstos]), went to Gondär to be close to the court of *nəguśä nägäśt* ↗Fasilädäs (KolTrad II, 49ff.). While living a simple life for "seven" years, H.Ś. attracted the Emperor's attention and proved his courage, and finally was awarded a honorary garment (*qämis*). Later, according to tradition, he received the title ↗*abeto* and the governorate of ↗Bambolo Məllaš, i.e. the authority over all the northern provinces of the Empire, and married the Emperor's daughter (or a relative) – but killed her shortly thereafter in anger. He was pardoned for this offence, but lost his governorate and title and was reduced to governor of Märäb Məllaš (i.e. the smaller provinces Säraye and Ḥamasen with their surrounding dependencies) with the title of *däǧǧazmač* (he possibly was later promoted to the rank of *baḥər nägaš* of Dəbarwa, cp. KolTrad III, A18, A36). According to tradition, H.Ś. governed for forty years, his appointment should have thus been around 1663/64. So important was his rule that *mədrä* Ab Śəllus ('Land of H.Ś.') is used as a synonym for Ḥamasen, his power base in the "short chronicles" (s. BegCron 93). H.Ś.'s son Gäbrä Krəstos later emulated his father: after a stay at the court he was promoted to *däǧǧazmač* and governed Bambolo Məllaš (before February 1693, BegCron 64). Thereafter father and son ruled jointly, Gäbrä Krəstos sitting by his father's throne during assemblies and judicial sessions which were always held at May Bäla. The most important achievement of their reign was the creation of a law code for Ḥamasen, the ↗*ḥəggi Ḥabśəllus*. Ḥamasen tradition attributes H.Ś. the first cultivation of the *bäräḵa* of ᶜAdwa, thus creating the conditions for the legendary foundation of ᶜAdwa by his descendant *baḥər nägaš* ᶜAndä [ᶜAmdä] Haymanot (KolTrad II, 66). H.Ś.'s hereditary fief was ᶜAddi Ḵefälät of the Loggo Č̣əwa in Ḥamasen, where he also was buried.

H.Ś. had two sons with his wife Ǝḥəta Mäläʾəkt, four more with a concubine. He was the founding father of the influential Ḥamasen dynasty of the ᶜAd Däggiyat ('family of the *däǧǧazmač*') from the ↗Däqqi Täššəm, which exercised power over the Märäb Məllaš and other regions until the appointment of *ras* ↗Alula Ǝngəda in the 1870s.

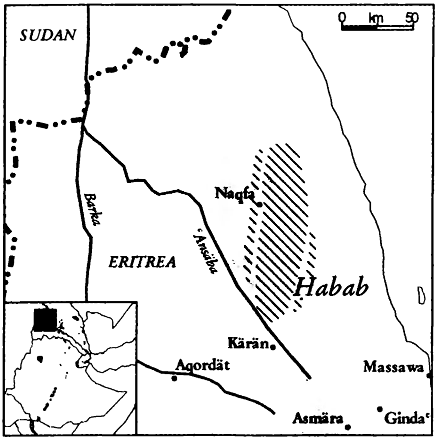
Wolbert Smidt

Ḥabab

The Ḥ. are a people in the ↗Saḥəl region of Eritrea, some groups also living in the Sudan. They speak a ↗Təgre dialect and are considered today part of the Təgre. Historically, however, they had a high degree of autonomy and have preserved a feeling of distinctiveness up to present, similarly to the neighbouring ↗Beni ᶜAmər and ↗Mänsaᶜ.

The Ḥ. are predominantly animal-husbanders. The Ḥ. highlands (Rora Ḥabab) – a mountain plateau accessible through deep stony valleys and winding mountain roads after a journey of some 14 hours from the Sudan – are inhabited by ca. 12,000 Ḥ. who confess ↗Islam and are semi-nomads. They spend the winter months in the highlands and in summer, when water grows scarce, travel with the animals to the Sudan, to the north-eastern coast, or to the ↗Barka valley. Today, some Ḥ. are sedentiary agriculturists and live in permanent settlements (e.g., the village of Rora Ḥabab). Water shortage is regulated by a new dam; Norwegian aid set up a huge agricultural rehabilitation programme in the 1980s. Thanks to initiatives of the local Rora Health Centre, the traditional female ↗circumcision



stopped in 1985 (Dorkenoo 1994; cp. also the study of Rora Ḥabab, Christian Aid 1993). There are still natural ↗forests in the Rora Ḥabab area. The migration patterns of the Ḥ. have changed only slightly in modern times. Today, Ḥ. groups also migrate and settle permanently in Sudanese ports, such as in Port Sudan, where they live in a situation of multiethnicity, together with the ↗Beǧa, ↗Beni ᶜAmər, ↗Hausa, ↗Fellata, Nuba and other Sudanese peoples.

The Ḥ. highlands are, together with Ḥamasen, settlement areas of the so-called ↗ᶜOna culture of ca. the second millennium B.C., as archaeological evidence such as stelae, ruins and pottery from the Rora Ḥabab shows (↗Rora). This culture was linked with ancient Nubia through overland routes (Jones 1991).

Genealogically, the Ḥ. leaders are the most important of three branches of the ↗Bet Asgäde (KilHDic 235). The members of this "aristocracy" (*šəmagəlle*) claimed a common descent from Habtä Iyäsus. Every chief of the Ḥ. has borne the title ↗*käntibay* since this title was conveyed to the Ḥ. leader by the emperor of Ethiopia (17th cent.). The Christian *šəmagəlle* "class" dominated Muslim serf groups, called *təgre*, who, in return for protection, were paying tribute. Corresponding to this, tradition reports that they were serfs of the Bet Asgäde (KolTrad II:13).

The Ḥ. ancestors are mostly said to have originated from ↗Akkälä Guzay, from where their leader Asgäde migrated to today's Rora Ḥabab in the early 16th cent. ca. (Crawford 1955; Conti Rossini 1913:381). Some claim the ↗Ṣänᶜadäglä as their ancestors; other Ḥ. groups, however, claim to descend from ↗Ḥamasen. Ḥ. oral history has kept detailed ↗genealogies (cp. d'Avray 1996; 2000). Ḥ. genealogies often start with the apical ancestor Mäfläs. He is said to have had three sons, who formed the Ḥ. groups ("the three Ḥ."). These brothers were called Abil (also Ḥabib), Täkles (i.e. Täklä Iyäsus; ↗ᶜAd Täkles) and Təmaryam (i.e. Habtä Maryam; ↗ᶜAd Təmaryam). The origin of the term "Ḥ." is not clear; it might come from Ḥabib, or could be an older geographical term for the province governed by the Bet Asgäde. From the early period of Ḥ. migration, conflicts with the ↗Funǧ are remembered, who later incorporated most of the surrounding areas.

Under the influence of the ↗ᶜAd Šayḫ, the Ḥ. leadership converted to Islam in the early 19th cent., also entering into a tributary relationship with them. In the second half of the 19th cent. the Ḥ. were incorporated into the Egyptian Massawa Province, accepting Egyptian suzerainty. The comparative stability of this period attracted a considerable number of foreign visitors, e.g., for hunting-expeditions or research (Ernst von Sachsen-Coburg und Gotha 1864; Heuglin 1877), or seeking for possibilities of Catholic mission (cp. Sapeto 1857).

However, after the Egyptian defeats of 1875/76, *ras* ↗Alula Ǝngəda's army repeatedly made incursions into Ḥ. territory. In this period, *aṣe* ↗Yoḥannəs IV also started to claim Ḥ. in his letters to foreign powers (1881, cf. Bairu Tafla 1981: 200). After the Ethio–Italian battle of ↗Dogᶜali in 1887, the British envoy Portal was sent to Yoḥannəs to negotiate the recognition of the possessions already acquired by Italy in the environs of Massawa, Gindaᶜ becoming the border town, Sänḥit being annexed by Italy and the Italian "Protectorate over the Asaorta and the H. Arabs" being recognized by the Emperor (Portal 1892:26). At the same time, on 9 July 1887 *käntibay* Ḥamid b. Ḥasan (Ḥaməd wäd Ḥasän) of the Ḥ. concluded a treaty with Italy, wishing protection against Alula's armies. This opened the way for the Italian plans to create a greater Red Sea colony. Step by step, Italian hegemony was replaced by sovereignty; the Ḥ. resistance was harshly suppressed, e.g., the *käntibay* was arrested (cp. the Naqfa documents 1887–1902; d'Avray 2000). The resistance resulted in the ↗"Ḥabab defection", which ensured that the Ḥ. could keep a number of their ancient privileges (Lenci 1999).

Ḥabab Defection

At the end of January 1895, almost all the ↗Ḥabab, led by *käntibay* Mäḥamud wäd Ḥamәd, left their region in north-western ↗Eritrea and crossed the frontier to the Anglo–Egyptian ↗Sudan in order to escape from Italian colonial rule. The episode, known as the Ḥ.D., was, firstly, a protest against Italian authoritarianism and, secondly, an attempt to evade the heavy taxes imposed by the colonial power.

The Ḥ.D. caused some tension in Anglo–Italian relations. It ended some weeks later when the majority of the Ḥabab returned to Eritrea (though *käntibay* Mäḥamud and his supporters remained in the Sudan). In the failure of the Ḥ.D. a leading role was played by ^{c}Ətman wäd Ḥәdad, who was appointed as the new Ḥabab *käntibay* by the Italian Government. ^{c}Ətman, the fourth *käntibay* in eight years, was to prove durable: at the end of World War II he was still in power.

Habait

In the poetry of ↗Beğa, the H. is a kind of four-line verse of varying metre (Roper 1927:150). The word is the accusative form of Beğa *hábay* (pl. *habáya*), which could have an etymological link with Somali *gábay*, the term used for epic poetry. Today, the word H. is frequently replaced by *faḍig girmét* (lit. 'with four heads'), since modern H. may be longer than the original four line H. When composed, a H.-quatrain is regarded different from such collective and traditional pieces as songs (*kwal*) and dances (*biiboob*).

As such, the H. is a kind of poetic discourse through which the personality of the poet (*labiib*) can be fully expressed. The poet composes as a H. what he wants to say (*miyaad*) and he 'throws' (*gaad*) this while challenging or addressing somebody. The word *gaad* is identical to ^{c}Afar *gad*, which is the generic term for ^{c}Afar poetry (↗^{c}Afar literature).

Unlike the ritual poetic forms, the H. is a 'saying of the heart' (*gin'aa duuy*), with its inspirations ranging from political protest to allusive poetry, e.g.: *Ilaylayiit aagra/ Ishafet ingadiinhoob/ Hadiidiini duuri eeḍab/ Uusak han gallabaaheeb*: 'The young girls of Laylay [in Sawākin]/ When they stand looking at me/ My uncle tells me to run/ whereas even walking is difficult for me' (Muḥammad Ad^{c}arob Al-Hağğ 1972:16).

ROPER, "The Poetry of the Haḍenḍiwa", *Sudan Notes and Records* 10, 1927, 147–58.

Didier Morin

Habar Awal

The name H.A. denotes one of the confederacies stemming from the Somali ↗Isaaq clan, described as the most numerous group of inhabitants in ↗British Somaliland in 1969. The H.A. were described as rich due to their trade connection with the port of ↗Berbera. The alleged founder of the confederacy was the son of *šayḫ* Isḥāq b. Aḥmad Abdarraḥmān, nicknamed "Hawal".

Unlike other alliances and sub-clan confederacies, the Isaaq names H.A., as well as Habar Yuunis, Habar Tol Ǧaᶜlo and Habar Garhağis, are preceded by the word *habar*, 'mother', which also occurs for other Somali clan groupings, e.g., the Habar Gidir. In the Somali language the term is used for a person who is a child of a mother belonging to a specific group. However, different sons and daughters born from the same mother consider themselves as belonging to the same *bah*, 'grouping of children united by the allegiance of being born from the same mother'. Such uterine commonality is sometimes referred to as "having been suckled from the same breast".

Sources do not agree on the number of children *šayḫ* Isaaq had in Somalia (seven or eight), nor on how many of them were born in Somalia and how many in the Yemen. Abdurraxmaan "Hawal" was among the sons born in Somalia and, according to the *manāqib* of *šayḫ* Isḥāq b. Aḥmad, he was the son preferred by the *šayḫ*, for he had inherited the father's *baraka*, more than the other sons. Some sources also indicate that the children born from *šayḫ* Isaaq in Somalia were begotten from two different mothers. Ismaᶜiil "Garhajis", Abdurraxmaan "Hawal", ᶜAli "Arab" and Ayyuub, had a mother of the Magaadleh clan of the Somali ↗Dir, being nowadays denominated Habar Magaadleh, namely, children of a same mother belonging to the Magaadleh clan.

As to Abdarraḥmān "Hawal", a tradition reports that he was born from a noble mother, a *šariifa*, who died before suckling him, and was brought up by a step-mother, wife of his father, belonging to the Magaadleh clan of the Somali Dir. Having been breast-fed by the same mother of Ayyub, a Magaadleh sister of the mother of Ismaᶜiil and ᶜAli married by *šayḫ* Isaaq in sororate (*higsiisan*), Abdarraḥmān is also often considered part of the same *bah* Magaadleh of the four brothers. Yet, despite oral traditions concerning the biological mother of Hawal and Ayyub as well as their nurturing mother, descendants of Ayyuub have been for a while included in the H.A. confederacy and uterine group, Ayyub being less prolific than his brother Hawal.

Ḥabašāt

It has been generally accepted that the ethnic, geographic and cultural term *Ḥabäša* (Amh.), *al-Ḥabaša* (Arab.; ↗Abyssinia) derives from Gəᶜəz *Ḥabäśa*, which is attested for the first time in Epigraphic Gəᶜəz *ḥbś* (RIE nos. 185 II, 1 and 185bis II, 2f.) and pseudo-Sabaic *ḥbśtm* in royal inscriptions from Aksum (RIE 185 I, 1 and 185bis I, 2), where it is mentioned among nine regions and places forming the kingdom of ↗ᶜEzana – here corresponding to Gr. ↗Aithiopía, in the sense of 'Highland(s)' (Fiaccadori 2004:126f.). According to traditional scholarship, the Gəᶜəz lexeme ultimately originates from Ḥ., the name of a South Arabian tribe which, probably in the first half of the first millennium B.C., crossed the Red Sea to North-East Africa. There exists, however, up to now, no attestation to the Ḥ. from the archaic period of the Sabaic inscriptions, either in South Arabia or in Ethiopia.

Since the time of Eduard Glaser, it has been repeatedly claimed that the hieroglyphic Egyptian *ḫbstjw*, indicating a foreign people from incense-producing regions, is connected with the Ḥ. The name *ḫbstjw* is first recorded in the ↗Punt inscriptions of Queen Hatshepsut, ca. 1460 B.C. With regard to the enormous temporal difference of a millennium or more, it is hardly acceptable that the Ḥ. have anything in common with this mythical people from a southern region.

Stephanos of Byzantium (first half of the 6th cent.), quoting in his *Ethniká* from the third book of the lost geographical work *Arabiká* of Uranios (probably from the 1st cent. A.D.), mentions the Ἀβασηνοί (*Abasēnoí*), an Arabian people living next to the Sabaeans together with the Ḥaḍramites. The region of the *Abasēnoí* produces myrrh, incense and cotton and they cultivate a plant which yields a purple dye (probably *wars*, i.e. *Flemingia Grahamiana*). It lies on a route which leads from Zabīd on the coastal plain to the Ḥimyarite capital Ẓafār. For that reason Hermann von Wissmann located the *Abasēnoí* in the fertile and rainy mountainous region of the Ǧibāl Ḥubayš to the north-west of present-day Ibb. There are, of course, other place names in western and south-western Yemen formed from the nominal root *ḥbš* which could likewise be compared with Gr. *Abasēnoí*, e.g., the district around the Ǧabal Ḥabašī in the western part of the Ḥuǧarīya, to the south-west of present-day Taᶜizz. It can be assumed that the Ḥ. who immigrated from South Arabia into north-eastern Africa are the *Abasēnoí* of Uranios who settled either in the region of Ǧibāl Ḥubayš or in the surroundings of Ǧabal Ḥabašī in south-western Yemen, the inhabitants of which are called al-Aḥbūš up to now.

From the end of the 2nd cent. A.D., we repeatedly encounter in Sabaic inscriptions the terms *ḥbšt* (Ḥabašat) and *ʾḥbšn* (Aḥbūšān) which refer exclusively to Abyssinia and to the Abyssinians, namely, to the African country and its inhabitants, e.g. *ʾrḍ/ḥbšt*, the country of Abyssinia, or *mṣr/ʾḥbšn*, the army of the Abyssinians. These terms occur frequently in texts from the 3rd cent. A.D., when the Abyssinians were invading the coastal plain of the Yemen and were constantly waging war against the Sabaeans and Ḥimyarites. The last reference to Abyssinia and the Abyssinians in South Arabian texts appears in the Sabaic inscription CIH 541, which was set up by the Christian king of Abyssinian origin ↗Abraha in the year 544 A.D., when he was assembling his troops from Abyssinia and Ḥimyar (*ḥbšt/wḥmyrm*) in order to suppress a revolt of the tribes and to repair the dam of Mārib.

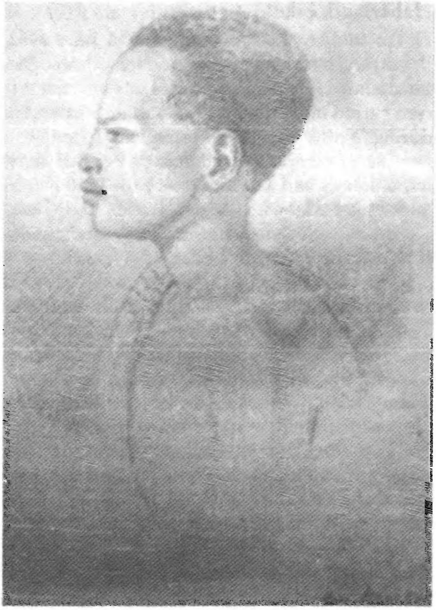
Walter W. Müller

Habasch, Karl Aman

H. (birth name Aman Gonda; b. ca. 1828, Hibi, Gomma, d. 1847, Mergentheim) was an Oromo informant of the scholar Karl ↗Tutschek. Son of an *abbaa fuññoo* (Tutschek 1844:xl; lit. 'master of the cord', s. ↗*abbaa gandaa*), H. was enslaved ca. 1836 and transferred to Khartoum. In 1840 Duke Paul Wilhelm von Württemberg (1797–1860) bought him free and took him to his residence in Mergentheim, South Germany. H. was baptized as a Lutheran and prepared to study medicine, so as to return to his motherland as a physician (Anon. 1844:365f.).



Karl Aman Habasch; drawing by an unknown artist; from Firla 2001:83

Tutschek was invited by the Duke in 1841. Before that, he had already been studying ↗Oromiffa in Munich with the help of Akaafadee Dallee, one of the "Moors" of Duke Maximilian of Bavaria (1808–88). In Mergentheim, Tutschek met H. and started with him an important, though short, linguistic collaboration. Due to the detailed knowledge of his country and language, H. proved to be Tuschek's best informant. He died of tuberculosis five years after Tutschek's death (Firla – Forkl 1998:85).

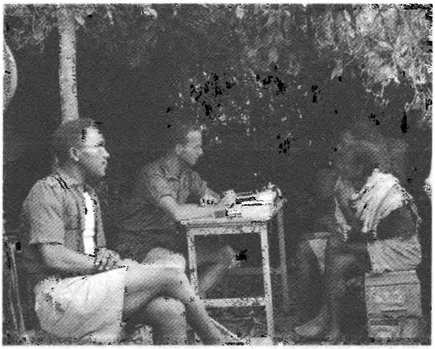
Haberland, Eike

H. (b. 18 May 1924, Detmold, d. 6 June 1992, Frankfurt am Main) was a German ethnologist. H. attended a secondary school in Potsdam. After a period of military service and imprisonment during World War II, he commenced studies of law (never completed), ethnology, oriental studies, indology and ancient history. In 1950 he obtained his Ph.D. with the dissertation *Das Gada-System der südwest-abessinischen Völker*, under the supervision of Adolf Ellegard ↗Jensen.

Between 1950–56, H. was research fellow at the ↗Frobenius Institute at the University of Frankfurt am Main and led field-work in Ethiopia. In 1962, he habilitated at the Faculty of Philosophy with his study *Untersuchungen zum Äthiopischen Königtum*. In 1965, he obtained the chair on Ethnology at the University of Mainz and two years later was called back for the same post at Frankfurt. Henceforth, his academic base was at the Frobenius Institute, which he directed from 1968 till his death. In the 1970s and 1980s H. also carried out research projects on the Yimar of Papua New Guinea and on crafts and pottery in Burkina Faso.

H. played a significant role in the scientific exploration of Ethiopia. Under his guidance pioneer ethno-historical studies on Ethiopia appeared (Lange 1982; Braukämper 1983; BrHad). H. also supervised a number of dissertations by African scholars, including that of Nagaaso Gidaada, first president of the Federal Democratic Republic of Ethiopia. He profoundly shaped the curriculum of Ethnological studies in Frankfurt and the Frobenius Institute.



Eike Haberland (centre) during fieldwork in Ethiopia; photo 1950/52, courtesy of the Frobenius Institut, Frankfurt am Main (23–Ha045–01)

H.'s field research was pioneering with respect to its breadth, joining an ethno-historical focus, paying attention to material culture with a comparative perspective. He was one of the first ethnologists deeply interested in historical and cultural relations between the Ethiopian highland state and the southern peoples, including the various ↗Oromo societies and the Omotic-speaking kingdoms and chiefdoms. His important 1963 monograph *Galla Süd-Äthiopiens* (VSAe II) is a valuable and unparalleled record of the Oromo people. H.'s field notes reveal an industrious researcher, driven by a deep sense of discovery. His major historical and comparative study of Ethiopian ↗kingship is still a reference source. Interested as well in the history of Ethiopian Orthodox Christianity and its various influences on Ethiopian society, H. discovered numerous ancient churches and Christian cult objects in Wälaytta and Dizi. (For a comprehensive listing of H.'s works s. Jungraithmayr – Kronenberg – Striedter 1989, vol. 1, 7–15.)

Though he was not a social anthropologist in the modern sense of the word, H.'s work remains, with its great descriptive quality and detail, an essential tool and resource for the study of Ethiopian society, having inspired many anthropologists.

Ḥabeš

Ḥ. (Ottoman Turkish حبش, Turkish *Habeş eyaleti*, in 16th-19th cent. European sources: [Coast of] Abex, Abech, from Portuguese "Costa de Abex") was the designation of the Ottoman province on the African shore of the Red Sea between ↗Sawākin and ↗Zaylaᶜ, with ↗Massawa as its first administrative centre. Within the Ottoman administrative system it was a *beglerbegi-*

lik ('Province of a *bey* of *beys*'), also called *eyalet* ('Governorate-General') in more recent times. Ḥ. is derived from the Arabic word for ↗Abyssinia, *al-Ḥabaš.*

After the ↗Dahlak Sultanate had vanished, ↗Aḥmad b. Ibrāḥīm al-Ġāzī's short-lived empire had collapsed and the empire of Ethiopia was weakened, the Ottomans under Süleyman the Great used the vacuum of power to bring the African shore of the Red Sea under their control. The ports of Sawākin, Massawa and Zaylaᶜ were subsequently occupied by ↗Özdemir *paša*, who had been appointed *beglerbegi* ('governor-general') in 1555. The province of Ḥ. was formed in 1557. An important aim was the contention of the Portuguese in the Red Sea, who had started to obstruct the pilgrimage to ↗Mecca and the spice trade. The first two years were a period of active expansion further inland. Vassals of the Ethiopian emperors, such as *baḥər nägaš* ↗Yəsḥaq in the highlands (in today's Eritrea), changed sides and allied with Özdemir *paša*; the Ottomans even built a mosque in *baḥər nägaš*'s capital Dəbarwa. Ethnic groups dominating the coast, such as the ↗Balaw, declared their allegiance, their leader becoming the hereditary Ottoman "deputy" (↗*Nāʾib*) over the coastline opposite Massawa.

The expansion was halted by a military expedition of *aṣe* ↗Śärṣä Dəngəl against the *baḥər nägaš* in 1578 (Conti Rossini 1923), and the Ottomans retired from most of the highlands. Only a few areas near the edge of the highlands, important for the control of trade routes into Ethiopia, stayed under their suzerainty (like the ↗Ṣänᶜadäglä in Akkälä Guzay, ↗Dəgsa becoming the half-Christian, half-Muslim border town).

During the following centuries, the Ottoman administration largely refrained from further interventions, relying on a system of indirect rule. The ↗Sämhar coastlands opposite Massawa were under control of the *nāʾib* in ↗Ḥərgigo, who acted almost as an independent ruler. He received rents from Istanbul and paid tribute to the Ethiopian ruler in times of strength of the Christian Empire. Only on the island of Massawa itself was there an Ottoman governor, who controlled trade and taxes; in Sawākin the Ottoman authorities appointed a customs officer. The garrison of Ḥərgigo, made up of Kurds, Albanians, Turks and Arabs, on the coast mixed with the local population, their descendants keeping the Ottoman rents and titles, while the *nāʾib* founded a petty dynasty (↗*Nāʾib* family).

Massawa being of secondary economical importance, Ḥ.'s administrative capital was soon moved across the Red Sea to Jeddah (end of the 16th cent. until the early 19th cent.; Medina temporarily served as the capital in the 18th cent.). Ḥ., which originally meant all "Abyssinia", was now a ***beglerbegilik*** of the Southern Red Sea ("Abyssinia" itself was later designated Habeşistan in Ottoman Turkish to avoid confusion with Ḥ.). It also appeared as the "*vilayet* of Jeddah and al-Ḥabaš". Administratively Ḥ. was divided into the *sanǧaqs* ('districts') of Ibrīm, Sawākin, Arkiko (Ḥərgigo), Massawa, Zaylaᶜ and Jeddah (s. Işıksal in EI^2, vol. 3, 11).

In the 19th cent. ↗Egypt radically reversed the political balance within the Ottoman Empire, and also Ḥ.'s political structure was deeply affected. When Egypt's leader ↗Muḥammad ᶜAlī *bāšā* successfully fought the Wahhābī revolt in the Ḥiǧāz (1811/13), he received the administration of Ḥ in 1813 (Talhami 1979:9). His son, the commanding general in Arabia Aḥmad Tūsūn *bāšā*, was appointed its governor (*wālī*) by a *firmān*, thus also gaining control over the ports of Sawākin and Massawa (Burckhardt 1968:47). In May 1822 Muḥammad ᶜAlī licensed the *kaymakam* of Massawa and installed his own candidate, Ḥusayn *effendi*, thus ensuring control over the customs (cp. the income of the year 1236 H. [1820/21 A.D.]: 24,000 tallaris; expenses: 18,000 tallaris). Yaḥyā *nāʾib* of Ḥərgigo, due to the loss of his de-facto independence and influence, immediately attacked Ḥusayn with 600 men, but quickly gave up. Shortly thereafter, his relative ᶜUṯmān was declared the new *nāʾib* "of Massawa" by Muḥammad ᶜAlī (s. his note to the customs director of Jeddah of 1 January 1823, Douin 1944:299). Muḥammad ᶜAlī's control of Ḥ. was only temporary; after the Wahhābī emergence came to an end, it reverted to Turkish rule in 1827. However, Massawa and Sawākin were given to him again in 1846 (until his death in 1849), formally staying under Jeddah, which still received tribute. Again in 1865 his son and successor, the *ḫidīw* ↗Ismāᶜīl of Egypt, acquired Ḥ. (with Massawa and Sawākin) under comparable conditions. In 1866, however, it was taken away from Jeddah and formally incorporated into the Egyptian vice-kingdom as a separate entity. Thus Ḥ. ceased to exist in its traditional form and starting from 1869 was replaced by a series of subsequent Egyptian governorates of different shape and included in the Egyptian East ↗Sudan.

The ambivalence of the term Ḥ., as both a provincial name and as a synonym for "Abyssinia", was felt throughout the whole Ottoman rule, up to its very end. The Ottoman *sulṭān,* during negotiations over the Ethiopian monastery of ↗Dayr as-Sulṭān, repeatedly declared that all the Ethiopians were his subjects and that he would never renounce his title over Abyssinia, "Ḥ." (s. RubInd 220), just like the medieval *sulṭān* of the Sublime Porte in Istanbul who kept this name in his titulature (s., e.g., Cumming 1937:32).

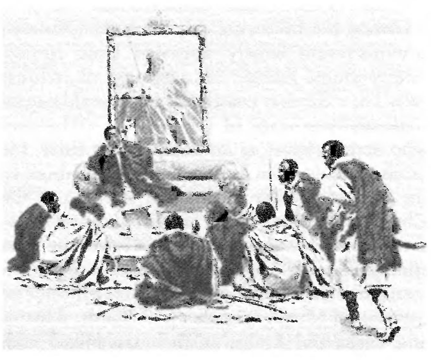
Habtä Giyorgis Dinagde

Fitawrari H.G. (ሃብተ፡ ጊዮርጊስ፡ ዲናግዴ, birth name Yädesa; b. 4 May 1854, Çäbo, d. 12 December 1926, Addis Abäba) was a military leader and a close associate of *aṣe* ↗Mənilək II. H.G. received his name from *azzaž* Abba Tämsas, the Šäwan commander who had captured him in the course of one of Mənilək's campaigns to the Gurage region. Abba Tämsas, who had no offspring, had hoped to adopt the 13-year-old lad, training him in horsemanship and the wielding of spears and shields. When faced with the prospect of setting him free in line with an imperial edict, he entrusted him to the custody of Mənilək, who placed him under the charge of the chief of the *baldäras.* Impressed by his skills and diligence, Mənilək made H.G. successively chief of the palace servants (*əlfəñ aškär*) and governor of his native district, Çäbo and Wänči.

H.G. took part in many of Mənilək's campaigns, including the Battle of ↗Ǝmbabo (June 1882), the crushing of the Islamic revivalist movement in the Gurage region led by ↗Ḥasän Ǝnǧamo (1888) and the Wälaytta campaign (1894), and commanded a contingent in the Italian war of 1895–96. Though still addressed as ↗*ato,* he was such an important figure in the court that was appointed by the Emperor a member of the delegation (along with *ras bitwäddäd* ↗Mängäša Atikäm and *ras* ↗Mäkʷännən) for the last-minute peace negotiations in the camp at ↗ᶜAdwa when Baratti sent Major Salsa. The negotiation failed; the intrepid general, *fitawrari* ↗Gäbäyyahu, fell in the battle of ᶜAdwa (GueCopMen 433). H.G. not only inherited Gäbäyyahu's title and position as commander of the imperial troops but also his lands in what eventually became the Märkato district of Addis Abäba (↗Addis Kätäma). A bridge marking the entry point of the district remains named after him to this day. His fiefs also expanded to in-



Fitawrari Häbtä Giyorgis Dinagde in 1922; from Jannasch 1930:57

clude Bäčo and Ambo as well as the sprawling province of Boräna in southern Ethiopia.

In 1907, when Mənilək introduced the ministerial system, H.G. naturally assumed the portfolio of Minister of War, a position that he retained until his death in 1926. Following the incapacitation of Mənilək after 1908, H.G. emerged as one of the power brokers. His political adroitness and keen sense of timing helped him play a decisive role in the momentous political decisions of the day. Thus, he was instrumental, along with the Regent, *ras bitwäddäd* ↗Täsämma Aśmärom, in the downfall of *ətege* ↗Taytu in 1910, cashing in on popular disgruntlement at her high-handed political interventions. In 1916, he led the opposition that resulted in the deposition of *ləğ* ↗Iyasu. At the Battle of ↗Sägäle that followed, he played a pivotal role in the victory of the Šäwan forces against Iyasu's father, ↗Mikaʾel of Wällo, lulling that ruler with pacific declarations until the Šäwans were ready to administer a decisive strike. He also led the subsequent campaign to subdue conclusively the province of Wällo.

In the new political order that ensued, H.G. had an uneasy relationship with *ras* Täfäri Mäkʷännən (the future ↗Ḫaylä Śəllase I), *de-jure* heir to the throne but *de-facto* ruler. H.G. was at the head of those who resented Täfäri's steady corrosion of the powers and prerogatives of Empress ↗Zäwditu, to whom, as the daughter of Mənilək, H.G. felt more loyally attached than to Täfäri. Yet, it was a measure of the power and awe that he exercised that he was the only minister who was not dismissed following the public agitation of 1918 against ministerial corruption and nepotism – an agitation behind which many contemporary observers saw the hand of Täfäri. In 1926, Täfäri's patience paid off when H.G. died of natural causes. Täfäri promptly inherited both his estates and his troops. Thereafter, his path to the throne became clear and smooth.

H.G. was noted, amongst other things, for his high sense of justice and the wisdom of his judgements. He reportedly had his own adopted son hanged for banditry. Of the many Solomonic judgements that are attributed to him, some of them apocryphal, perhaps the most famous is the one that he is said to have passed in a divorce case. A man had taken a woman to his house for the night, agreeing to pay the two *bərr* that she had demanded for her services. They grew fond of each other and went on to live together for many years. Then, the man's affection apparently wearing off, he told her to leave his house empty-handed. The woman appealed to H.G. for justice. Noting that the partners had no marriage contract, H.G. ruled that the man was free to divorce the woman, but should pay her for the entire number of years they had been together at the nightly rate they had initially agreed upon. As this came to quite a hefty sum, the man was forced to beseech the woman to come back to his house.

Bahru Zewde

Habtä Maryam

H.M. (ሃብተ፡ ማርያም; d. 22 November 1497, Däbrä Libanos) was an Ethiopian holy monk. His Vita, composed in the early 16th cent. by ↗Iyasu of Ǧär Śəllase, is preserved in at least eight manuscripts; there are also ↗*mälkəʾ*-hymns in his honour (s. Raineri 1990).

According to his Acts, H.M. was a son of Yosṭena and of Fəre Buruk, a well-to-do landowner of Yärawʿəy in ↗Šäwa. While a boy, H.M. distinguished himself through his piety. Preparing H.M. to the secular life, his father sent him to a teacher, but H.M. went away to stay 12 years with a certain monk Samuʾel in Efär practising ascetic discipline and working miracles. Later, he went to the monastery Ǝllä Adbar (where he assumed the monastic habit from the abbot Mälkä Ṣedeq) and visited several other places, before settling at Gʷaḥarb. There, he kept practising strong asceticism (the most severe exercise was similar to the "standing" described in the legend of *abunä* ↗Täklä Haymanot, s. Raineri 1990: 44f.), while being well-loved by monks and people.

Following the order of the Archangel Michael, H.M. was ordained deacon by the Metropolitan *abunä* ↗Yəsḥaq (in 1481/82), and lived supervising the religious life of the area. Enraged by the local people who were eating and entertaining themselves during a church feast (↗Feasts), H.M. left the place. St. Michael took him on a voyage to Sheol, Gehenna, Paradise (where he met Täklä Haymanot and other eight abbots of ↗Däbrä Libanos of Šäwa, Raineri 1990:82–85) and heavenly Jerusalem. After the journey, H.M.

was initiated into the whole of secret knowledge. Again on the order of St. Michael, H.M. went to the metropolitan to be consecrated priest. While H.M. was exercising his ministry in Hʷällagʷət and in Gʷana, God sent him to *aṣe* ↗Naᶜod (who in the Acts is to fight the ↗*Ayhud*), to bring him "the book of mysteries" that Jesus had revealed to H.M. (Raineri 1990:116f.); the Emperor, in his turn, asked H.M. to pray for his country. Finally, H.M. entered Däbrä Libanos, where he died of plague on 26 *Ḫədar*.

The historical identity of H.M. remains vague. It seems certain that he was a prominent member of the community of Däbrä Libanos already in the time of *əç̣ç̣äge* ↗Märḥa Krəstos and stayed behind the early-16th-cent. *əç̣ç̣äge* ↗Ṗeṭros (cp. H.S.'s important role in the destiny of *əç̣ç̣äge* ↗ᶜƎnbaqom, s. Ricci 1955–58:75f.; contrary to the chronology in H.M.'s Acts, Raineri 1990:8, 136f.). H.M.'s ascetic life was rather hermitic than coenobitic; he acted as the community's "prophet" and "seer" (↗Hermits). He seems to be connected also with Ǧär Śəllase in ↗Ǝnsäro (historically affiliated to Däbrä Libanos); the Acts of its founder Iyasu proclaim the latter H.M's disciple (Raineri 1990: 201). There are very few other traces of H.M.'s veneration (Sauter 1963:277, no. 97).

H.M. of Säwa should not be confused with a number of other persons by the same name (cp. Raineri 1990:8 and n. 12). Historical identities of most of them are not established: among those worth mentioning is H.M. from Təgray (KinBibl no. 74), possibly identical with the 15th-cent. *abunä* H.M. in a legend of Ǝnda Iyäsus in Qästa Agam, Wälqayt (Ellero 1948:121f.).

Habtä Maryam Gäbrä Ǝgziʾabəḥer

Däǧǧazmač H.M. (ሃብተ፡ ማርያም፡ ገብረ፡ እግዚአብሔር; b. June 1910, Neqemte, d. January 1937, Neqemte) was an important political leader in the first half of the 20th cent. The son of *däǧǧazmač* ↗Gäbrä Ǝgziʾabəḥer Moroda, governor of Wälläga, H.M., like his father, received a traditional church education and, together with the sons of other local notables, was sent for further education to Europe, where he learned French. When his father died, he was given the title of *däǧǧazmač* by *ras* Täfäri Mäkʷännən (the future *aṣe* ↗Ḫaylä Śəllase I) and was acknowledged as hereditary ruler of Wälläga, a position he originally held under a council of local elders (*salge*). When H.M. reached the age of 21, he officially took control of state affairs and adjudicated court cases. He promoted education and encouraged development and trade, particularly in coffee and tobacco. In October 1934, after a series of central-government appointees and their ↗*näfṭäñña* soldiers had mismanaged ↗Ǧootee Tulluu's country and abused its resources, he was entrusted with the administration of ↗Qälləm, a responsibility he kept until the eve of the Italian occupation.

Däǧǧazmač Habtä Maryam Gäbrä Ǝgziʾabəḥer; photo 1934, courtesy of Peter the Great Museum of Anthropology and Ethnography, St. Petersburg

When rumours of the pending invasion reached Neqemte, H.M. raised funds for the war efforts and sent a contingent of troops from Wälläga. H.M. himself stayed behind at the Emperor's request. After the Italian troops took over Addis Abäba in 1936, H.M., together with another 30 chiefs and notables, attempted to establish a provisional Government for Western Oromo that sought independence from Ethiopia. After this, he hosted in Neqemte a group of cadets from the Holota Academy (↗Ṭəqur Anbäsa) – these same cadets foiled the Italian's attempt to contact H.M. in July 1936 by killing the crew of an Italian plane which had landed near Neqemte. H.M. finally submitted to Italian rule and was shortly after recognized by them as the hereditary ruler over the western district.

H.M. fell ill after the Italians forcefully recruited him to join their expedition in the Ǧimma region against *ras* ↗Ǝmməru Ḫaylä Śəllase's loyal troops and soon after this he died.

Habtä Maryam Marqos

H. (**ሀብተ፡ ማርያም፡ ማርቆስ**; b. 3 July 1930, Ǝndəbər [Gurage], d. 1992, Addis Abäba) was a linguist, folklorist, and pioneer in Ethiopian higher education. He attended elementary school at the Dərre Dawa Lazarist Mission and high school at the Täfäri Mäkʷännən Secondary School in Addis Abäba. In 1951, H. joined the University College of Addis Ababa (UCAA; ↗Addis Ababa University) and graduated in Education in 1954. In 1955, he went to Canada to continue his studies at the University of Manitoba, and then to Georgetown University, where he did a Master's degree in Linguistics. In 1958 he joined for one year the Department of Near Eastern Studies at the University of California, Los Angeles (UCLA).

In 1959, back home, H. started working with the Ministry of Education as head of a language research section. In 1960, he took a teaching position at the Faculty of Education of UCAA. While in the same Faculty, he helped organize the Department of Ethiopian Languages and Literature in the Faculty of Arts and taught linguistic courses. In 1964, he went to UCLA to do a Ph.D. in Linguistics under the supervision of Wolf Leslau, who had already started researching on Ethiopian Semitic with a focus on the Gurage languages, for which H. proved an indispensable assistant. Unfortunately, interpersonal relations deteriorated and he had to return home while he was well into his thesis on the phonology of ↗Ənnämor, one of the varieties of Western ↗Gurage.

H. resumed teaching at the Faculties of Education and Arts, where he continued helping the Department of Ethiopian Languages and Literature. In 1969, he took a one-year leave to teach Amharic at Northwestern University, Evanston, IL. Back in Ethiopia, he served as head of the Department of Secondary Education until his transfer to the Department of Ethiopian Languages and Literature in the Faculty of Arts. With the establishment of the Institute of Language Studies in 1978, he helped in the course-design of the Department of Linguistics. He also helped start Graduate Programs in Linguistics, Literature, and Test of English as a Foreign Language (TEFL) in 1979, the year in which he became dean of the Institute.

H. sat on several Senate Committees of the University and, at the national level, was a member of the National Committee for Language Policy. He also had an advisory role in the Academy of Ethiopian Languages. In 1981 he was appointed Executive Director of the Eastern African Center for Research on Oral Traditions and African National Languages, a position he held in Zanzibar until 1985. After this, he came back to the Institute of Language Studies.

In his earlier research, H. compiled a substantial collection of Gurage folk songs, which he published with William Shack (1974). Other publications include articles on a variety of issues on Semitic and Omotic languages, and translations into Amharic of such works as Carlo Conti Rossini's Gəʿəz Grammar and Antoine de Saint-Exupéry's *Le Petit Prince* (1973). He also contributed to the design of orthographies for a number of languages introduced for the series of literacy campaigns launched by the government. His lifelong services were recognised by Addis Ababa University on the occasion of its Golden Jubilee Anniversary in 2000.

Baye Yimam

Habtä Śəllase I

H.Ś. (ሃብተ፡ ሥላሴ; fl. 16th cent.) was a monk and the head of the monastery of ↗Gundä Gunde, the stronghold of the ↗Stephanites, who suceeded *abunä* ↗Gäbrä Mäsiḥ I ca. 1522 (Beylot 1991:7). According to his Vita, Gäbrä Mäsiḥ predicted that H.Ś. would follow him as the head of the monastery (ibid. 11; in keeping with the sequence in Mordini 1953:59, but with different chronology). H.Ś. was obviously a contemporary of *aṣe* Ləbnä Dəngəl (r. 1508-40); possibly, he was in tenure for 17 years (ibid. 57f.) and died on 17 *Miyazya*. A manuscript with the Vita of H.Ś. (which includes also the Vita of Gäbrä Mäsiḥ) is preserved in Gundä Gunde (ibid. 50, nos. 1, 112 [cp. also the incipit of the Vita ms. 1, fig. 22]) and was copied for Conti Rossini (StrANL no. 9, fol. 33r-48v, with printed incipit and explicit). Besides, the text was photographed by Roger Schneider (Beylot 1991:6), and a microfilm has been deposited at the Institute of Archaeology, Addis Abäba (KinBibl 77, no. 75), but remains unexplored.

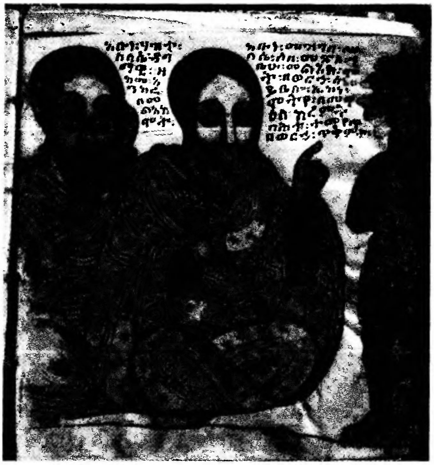
Denis Nosnitsin

Habtä Śəllase II



Abunä Habtä Śəllase II, *abunä* Mäzgäbä Śəllase and the Angel of Death, ms. *Gädlä Mäzgäbä Śəllase* (= Mordini 1953:50, no. 116), fol. 11r; 17th cent., Gundä Gunde, photo 2002, courtesy of Michael Gervers

H.Ś. (ሃብተ፡ ሥላሴ; fl. late 17th cent.) was a monk and the head of the monastery of ↗Gundä Gunde. According to the fragmentary information from his Vita (preserved in the monastery [s. Mordini 1953:50, no. 117]), he was born as the eldest of four children to Fares and Sofiya in the land of ↗Irob, where his ancestors, who originated from Wäsoma, near Aṣbi (Kəlləttä Awləʿalo), had to flee on account of disputes. After his parents died, at the age of 12 (a frequent hagiographic topos), H.Ś. decided to become a monk and, together with his sister, went to Kaswa (i.e. Gundä Gunde), where he later received the monastic habit from the abbot *abuna* Täklä Näbiyat. A certain *abba* Bənyas became his teacher. H.Ś. was sent to *abuna* ↗Krəstodolu (probably the one who was a contemporary of *aṣe* ↗Susənyos) to be ordained priest. Several years after his return to Gundä Gunde, he was elected head of the monastery (but cp. the chronology in Mordini 1953:59, where H.Ś. appears to have succeeded Mäzgäbä Śəllase, whereas Täklä Näbiyat is supposed to have died in 1554).

By that time the ↗Stephanites had reconciled with the Church, and H.Ś.'s most significant contribution was his strong stand for Orthodoxy against ↗Catholicism. He hosted in the monastery Orthodox clergy who fled from northern areas because of the persecutions of *aṣe* Susənyos. As a theologian, he rebutted Catholicism and is reported to have written a book against Catholic doctrines. H.Ś. died on 8 *Mäskäräm* and was buried in Gundä Gunde (Mordini 1953:57ff., however, credits H.S. with a five year tenure only and puts his death in 1709).

Apart from the manuscript of the Vita of H.Ś. preserved in Gundä Gunde (Mordini 1953:50, nos. 1, 112), a microfilm of the text is reported to be in the Institute of Archaeology, Addis Abäba (KinBibl 77, no. 76). The Vita, still unexplored, may be a valuable source, since virtually nothing is known on the history of Gundä Gunde during the 17th–18th cent.

Lit.: ROBERT BEYLOT, "Les actes de Gabra Masiḥ I (ca 1419–1522)", *RSE* 1991 [1993], 5–11; KinBibl 77, no. 76; ANTONIO MORDINI, "Il convento di Gunde Gundiè", *RSE* 12, 1953 [1954], 29–70, here 50, no. 117 [*Gadla Habta Sĕllāsē II*]; TADDESSE TAMRAT, "Some Notes on the Fifteenth Century Stephanite 'Heresy' in the Ethiopian Church", *RSE* 22, 1966, 103–15.

Mersha Alehegne – Denis Nosnitsin

Haɖánɖowa

Haɖánɖowa language

Through various pronunciations, depending on the degree of Arabization of the speaker or on alleged etymologies, H. (also Hadendoa, Hadendiwa, Haɖánɖiwa) is the autonym of the most-numerous ↗Beğa-speaking group, mainly located in the Gaš valley and in the region of Sinkat and Port-Sudan. The forms without a retroflex *ɖ* are usually used by non-Beğa Arabic-speaking groups and have been popularized by the British administration.

The H. speak the southern dialect of Beğa, as opposed to the northern variety (*mímhít beɖáwie*), with two main isoglosses: /i/ instead of /u/ (*ti-beɖáwie, ti-bɖáwie*, 'in the Beğa language', north *tu-beɖáwie*), and vowel lengthening (*déela*, 'hole', north *déla*). Sinkat, inside the migration area of the H., appears as a transition zone with the northern dialect (as described by Almkvist), sharing some phonemic features, e.g. keeping the vowel /ə/ before a stressed syllable: *naa məhín*, 'what place?' (Roper 1928:108), Gaš *naa mhíin*. Both varieties are mutually intelligible, but speakers are highly sensitive to these local differences, which can be also sociolects (the /s/ added by the Halanga recorded by Reinisch). Hudson's data deal with a variety of southern Beğa in contact with Təgre in Tokar. Muḥammad Adʿarob's corpus (in Morin 1999:115–32) consists of an important collection of texts where the southern dialect, as spoken in Port-Sudan–Haya area, is found along with northern data due to the prestige of poetry composed in that variety. One can compare (Roper 1927:150, in Morin 1997):

- *te šankete baasʾaabik*, '(Contrary to those) with clothes caught';
- *yi hindi te taageyetee*, 'In the thorn bushes, and also hats',;
- *u rʾad atʾafeyaa baadə hiin daa*, 'Who died protecting their family';
- *dawit teteb abaaɖen*, 'He, he has forgotten his relatives';
- and Muḥammad Adʿarob: *ti šankete baasʾaabiik/ yhindi titaagiyaytee/uu rʾad atʾaffiyaa baa hiin ʾar/ dawitayteeb ibaaɖin*.

Didier Morin

Haɖánɖowa ethnography

The H. (Hadändowa, Hadendoa) are a section of the ↗Beğa ethno-linguistic group, belonging to the Southern Beğa, who live in the North-eastern Sudan between the Nile and Red Sea Hills, as well as in the Western Lowlands of Eritrea (Killion 1998:112). The relationship between H. and ↗Ḥədareb is often misinterpreted, i.e. it is not clear if they are one ethnic group, as sources as well as oral historical accounts state, however (Seligman – Seligman 1930:93; Paul 1950:235). The word Ḥədareb in Beğa (*tu-beɖawiye*) means serf and explains their subordinated status within the H. group (Zaborski 1998:49; Nadel 1945:7; Paul 1950:235; Mohammed Sheikan 1996). During the 1950s the three main groups of the Beğa, i.e. H., the Amarʾar and Bisharyyin population in Sudan was 285,000 and has certainly doubled today. Historically the H. were a feudal society with a *Nazir* as a paramount chief governing over about 40 sections (*badanas*), similar to the organization of the Təgre-speaking Beni ʿAmər, who live in Eritrea, but also along the Sudanese border. The neighbourhood of these two "confederations" was not always peaceful, as the war from 1943–46 shows, but the struggle to increase their territory lead to the fact that the spheres of influence of both groups are much overlapping (Herzog 1979:616).

H. are Muslims and pastoralists – herding cattle, sheep and camels – who migrate seasonally throughout this semi-arid, but fertile region in search for adequate pasture for their animals. Their homesteads are tents, made of bent wooden poles covered with a layer of smoked doum-palm fibre mats, which are scattered throughout the area. Inside the houses goats'-hair blankets cover the walls; on doum-palm fibre mats stands the large bed (*arkai*) or an *angareb*. Women are active in producing household utensils from doum- or argun-palm, fibre such as baskets, bags, plates and milk containers (*ʿamur*). Since milk is not allowed to touch metal or clay, these handicrafts play a vital role in daily life. The H. live on a sorghum, milk and meat diet (Streck 1982:110).

H. men have a distinct appearance. They wear long untrimmed black curly hair (nowadays partly covered with cotton cloth), which

Rudyard Kipling termed "Fuzzy Wuzzy". It is decorated with a comb with three prongs and/or a one-prong hair-scratcher. A cotton cloth is draped crosswise over the upper body. On his upper arm he wears a dagger and on his waist a cross-handle sword; formerly he also carried a spear and a leather shield (Herzog 1979:616, Streck 1982:110f., cf. Fisher 1984:268f). The women are dressed with three cloths wrapped around the waist, the shoulders and the head. Formerly, before the H. were Islamized and Arabized the women wore a skin skirt with a belt only and were probably organized on a matrilinear basis (Streck 1982:111).

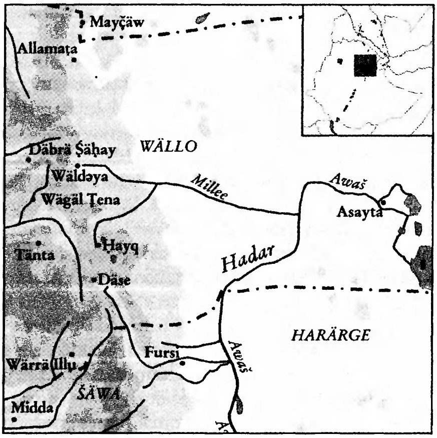
Hadar

H. (**ሀዳር**) is a regional place-name referring to an area of approximately 65 km² located about 300 km north-east of Addis Abäba in the west-central area of the ↗ʿAfar Triangle (11° 10' N – 40° 35' E). The region owes its name to the Qada Hadar *wādī* (seasonal watercourse). Extensive semi-arid badlands topography and a narrow strip of riverine woodlands immediately adjacent to the ↗Awaš River characterize the H. area landscape.



The area contains substantial outcrops of Plio-Pleistocene sediments, some as old as 3.4 million years, and represents one of the most productive areas of palaeoanthropological research in Africa. It has been the location of long-term interdisciplinary palaeoanthropological, geological, and palaeoenvironmental research since the early 1970s. More than 300 specimens of the early hominid species ↗*Australopithecus afarensis* have been recovered within the H. area, including, among others, the "Dənqənäš" ("Lucy") specimen (ʿAfar Locality 288), the "First Family" specimens (ʿAfar Locality 333) and a nearly complete male cranium (ʿAfar Locality 444). Important palaeoanthropological finds from H. also include a maxilla of a *Homo habilis* (↗Homo) specimen (ʿAfar Locality 666) associated with Oldowan stone tools and dating to about 2.3 million years.

Ḥadārém

Ḥ. (Arab. Ḥadārim, also known as Ḥadāréb, Ḥadārmó in the kingdom of ↗Dankáli, Balawtá among the Southern ↗Adᶜáli) is an ↗ᶜAfar tribe scattered between Miᶜdír and ʿÍddi (↗ᶜEdd), on the Red Sea coast. According to popular traditions (Pollera 1935), the tribe originated from Yemen (↗Ḥaḍramawt). This is not contradictory with a parallel influx of ethnic ↗Beğa groups speaking Təgre, still called Ḥadāreb (↗Hədaräb), in Eritrea (Ḥadāriba, Ḥadārib in the Arabic sources on the Sudan). Among the Arteyga, *hadarabaít* is parallel to *beḍawiét* 'in Beğa language' among the ↗Hadándowa.

In Eritrea the group is divided into two main sub-groups, Datá Ḥíggi and ᶜAsá Ḥíggi, the sons of two homonymous related ancestors ʿÚmar "Datá Ḥíggi" b. Bassá Ḥámad b. *ḥāğği* ʿÚmar (or ᶜAmūdaddīn Bā Saffār), from Ḥaḍramawt, and his nephew ʿÚmar "ᶜAsá Ḥíggi". Datá Ḥíggi includes the sub-clans Awli-Gúra (or ᶜAli-Gúra), Garbalé, Bitᶜáytu and Ḥamōdādí (among whom the traditional chiefs *rēdántu* were chosen). The ᶜAsá Ḥíggi sub-clans are: ᶜAli Góhli (elder lineage); ᶜAsá ʿUdúm; Datá ʿUdúm; Húmmad-Dāba; and Bōraᶜadó, also known as Gurmaḥtó or Bōliytá. Odorizzi (1911) mentioned in his 1910 survey the ᶜAsá Híggi in the sultanate of Bîḍu, who could be related to the ᶜAsá ʿIbád of Sidīḥá ᶜAlé. Among the Southern ᶜAfar, the Ḥadarmó are historically considered as linked to the ᶜAblé, both tribes being of an older stock than the ᶜAfar Adᶜáli, whom they helped in gaining power against the Ankālá.

Ḥaddis ᶜAlämayyähu

Ḥ.ᶜA. (**ሐዲስ፡ ዐለማየሁ**; b. 17 October 1909, Ǝndodam, near Däbrä Marqos, d. 7 December 2003, Addis Abäba) was a statesman and writer.

Born to ᶜAlämayyähu Solomon, an Orthodox priest, and Dästa ᶜAlämu, the daughter of a priest, Ḥ.ᶜA. pursued traditional church ↗education up to the level of *zema*-chants at home under his maternal grandfather, ᶜAlämu Śəyyum. He then proceeded to ↗Däbrä Gännät Elyas, thence to ↗Däbrä Wärq and finally to ↗Dima Giyorgis, where he graduated in *qəne*.

In 1925/26, Ḥ.ᶜA. went to Addis Abäba and joined the Swedish Mission School, where he became acquainted with the English language. Two years later he was transferred to the Täfäri Makʷännən School under the auspices of *ras* ↗Ḥaylu Täklä Haymanot of Goğğam. Before he was forced to quit by the rescission of his boarding-student status due to a student strike towards the end of 1930/31 academic year, Ḥ.ᶜA. took active part in the school activities, especially in award-winning play performance.

Ḥ.ᶜA.'s first Amharic play, **የሐበሻ፡ እና፡ የወደኋላ፡ ጋብቻ** (*Yäḥabäša ənna yäwädäḫʷala gabəčča*, 'The Marriage of Ḥabäša and the Backward'), was written for a school performance, but staged in the Majestic Hotel in Addis Abäba. This and another play, staged at Crown Prince ↗Asfa Wäsän Ḥaylä Śəllase's wedding in May 1932, made him noticed by many prominent persons, including the newly crowned Emperor ↗Ḥaylä Śəllase I. After a brief experience as a teacher in Addis Abäba, in 1933 Ḥ.ᶜA. was appointed by *näggadras* Wädağo ᶜAli a customs officer, and later a member of a team to enforce the anti-slavery proclamation at ↗Dangəla in Goğğam. Shortly after, he was re-assigned to open and run a grade school in the newly abandoned premises of a British Consulate there.

In 1935, on the eve of the Italian war, he was transferred to Däbrä Marqos, where he played an active role in rousing people to defend their motherland. Ḥ.ᶜA. fought at the front in northern Ethiopia and later as a guerrilla fighter in the south-west of the country, in both places under *ras* ↗Ǝmməru Ḥaylä Śəllase. Captured in 1936, Ḥ.ᶜA. was shipped to detention in Italy with ↗Yəlma Däressa and did not return to Ethiopia until November 1943.

Ḥ.ᶜA.'s subsequent governmental career was long, spaning from 1943 to 1974 and including assignments like: Ethiopian Consul-General in Jerusalem (April 1945), where he met and married his wife in 1946; First Secretary of the Ethiopian Legation in Washington under Ǝmməru Ḥaylä Śəllase (14 August 1947), where his tasks included handling also Ethiopia's United Nations responsibilities; Director-General in the Ministry of Foreign Affairs (19 December 1950); Vice-Minister (29 July 1952); Ethiopian ambassador to the United Nations (26 July 1957).

On 10 June 1960, he was re-appointed to the Ministry of Foreign Affairs as a Minister of State. The ↗Coup d'état of 1960 occurred six months later, prompting him to submit immediately to the Emperor a memorandum calling for a complete constitutional overhaul. In February 1961 he was appointed Minister of Education; he resigned in July 1961 and was immediately appointed Ethiopian ambassador to the United Kingdom, also accredited to the Netherlands. In May 1966 he came back as Minister of Planning and Development in the new ↗Aklilu Habtäwäld cabinet. The "Third Five-Year Development Plan", prepared by his ministry, proved too controversial to implement, and Ḥ.ᶜA. resigned in 1969. The same year he became a member of the Ethiopian "Senate", where he presented a draft proclamation on freedom of speech and written expression. He served there till the start of the 1974 ↗Revolution. Ḥ.ᶜA. declined the post of Prime Minister, offered to him by the *Därg* in the last days of imperial rule. He served, however, in the *mämakərt šängo* (**መማክርት፡ ሸንጎ**, lit. 'assembly of advisors'), representing the people of Goǧǧam.

Ḥ.ᶜA.'s more enduring contribution to Ethiopian society lies in his literary activity. In 1956 he published two small-sized works: **ተረት፡ ተረት፡ የመሠረት** (*Tärät tärät yämäśärät*, 'Tales, Tales of Old'), a collection of eleven fables, and **የትምህርትና፡ የተማሪቤት፡ ትርጉም** (*Yätəmhərtənna yätämaribet tərgʷəm*, 'The Meaning of Education and School'), a book expounding his views on the goals of education.

Ḥ.ᶜA.'s first novel, ↗*Fəqər əskä mäqabər*, published ten years later, was an immediate success, having enjoyed nine reprints to this date. In 1969 this work won the author The Ḫaylä Śəllase First Prize for Amharic Literature. His later novels were **ወንጀለኛው፡ ዳኛ** (*Wänǧeläññaw dañña*, 'The Criminal Judge', 1981/82) and **የልምዣት** (*Yälməžat*, 'Sweet Only in Dreams', 1988) and did not attract much critical attention or public interest. Ḥ.ᶜA. also penned a political tract, **ኢትዮጵያ፡ ምን፡ ዓይነት፡ አስተዳደር፡ ያስፈልጋታል** (*Ityopya mən ᶜaynät astädadər yasfälləgatal*, 'What Kind of Governance does Ethiopia Require', May 1974). His memoir **ትዝታ** (*Təzzəta*, 'Remembrance', 1943) recounts the events of the 1935/36 Italian war and Ḥ.ᶜA.'s subsequent seven years of detention in Italy.

Ḥaddis Kidan ↗New Testament

Ḫadgä Anbäsa

Däǧǧazmač Ḫ.A. (**ኀድገ፡ አንበሳ**, vars. in oral tradition Ḥadgämbäs, Ḥadgämbäsa, Ḥadgu Ambäsa; b. ca. 1854, d. ca. 1891 ᶜAsäb) was a ↗Ḥamasen leader from ↗ᶜAd Täkäläzan, descendant of the ᶜAd Elos, one of the two local *šəmagəlle* (aristocratic) clans, the other one being the ᶜAd Kəflom. On killing an elephant, Ḫ.A. received the honorific title of *ḥanta*.

The ᶜAd Elos rose to prominence under Ḫ.A.'s father, *käntiba* Gʷəlbät (or Gəlwät) Tedros, who had a blood-feud with the Ǝnda ↗Hazzäga. In 1851 Gʷəlbät killed their most important member, ↗Ǝllen, the regent of Ḥamasen. Her son, *däǧǧazmač* ↗Wäldä Mikaʾel, avenged by burning down ᶜAd Täkäläzan in 1855. The peace, finally established through the traditional reconciliation method of a political marriage between Wäldä Mikaʾel's daughter and Gʷəlbät's nephew, did not last. One generation later Ḫ.A. used the arrival of the Italians to establish his supremacy and take revenge on Hazzäga.

Ḫ.A. entered the Italian service as the head of a *banda* (a group of local soldiers under Italian command). First he took control of ᶜAd Täkäläzan, chasing away *käntibay* Našəḥ of the ᶜAd Kəflom. Next, in July 1889, Ḫ.A. burnt and pillaged Hazzäga, placing it under the Italian rule (KolTrad III, A110; KolTrad II, 198f.). This was one of the crucial moments that enabled the annexation of the whole Ḥamasen and, consequently, the proclamation of the Colonia Eritrea on 1 January 1890. Like many other local leaders who had used the Italians to achieve their own political goals, Ḫ.A. was arrested in ca. 1891 in Massawa and incarcerated in ᶜAsäb, where he died (KolTrad II:199; cp. KolTrad I:257; II:197).

In the 1920s, Ḫ.A.'s son Asfäḥa Ḥadgämbäsa was appointed representative of ᶜAd Täkäläzan within the Italian system of indirect rule. He was still in office during the period of British occupation (1941–52), when he succeeded in settling the ᶜAd Elos – ᶜAd Kəflom feud (KilHDic 32).

Wolbert Smidt

Hadiyya

Hadiyya language

H. (in older literature also referred to as ↗Gudela) belongs to the H. language group, which forms one subgroup of the ↗Highland East Cushitic languages. In view of the number of speakers, H. is one of the most-sizeable languages in Ethiopia. A census published in 1998 numbers native speakers at 923,958, of which 595,107 are monolingual (Grimes 2000). "Within Hadiyya there is very little lexical variation, and only [the] Baadowačo [dialect] shows minor morphophonemic differences" (Korhonen – Saksa – Sim 1986a:37). ↗Libido (Maraaqo), which has 82 % lexical similarities with H. (Grimes 2001), can be considered a separate language because of "important differences in the verb paradigms and numerous small differences in the lexical shape of many grammatical morphemes" (Korhonen – Saksa – Sim 1986a:37).

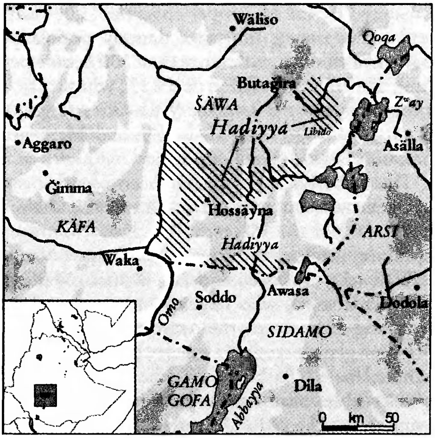
The vowel system consists of the five phonemically short and long vowels *i*, *e*, *a*, *o* and *u*. The consonant system includes 23 phonemes, of which four are the ejective stops *p̣*, *ṭ*, *č̣* and *q* (Sim 1989:11ff). Consonant gemination is phonologically distinctive. Within the verb paradigms numerous morphophonological processes occur, such as assimilation, epenthesis, metathesis and consonant strenghtening.

In the noun morphology "gender has been almost completely lost" (Sim 1989:108). The number system includes a semantically unmarked form called indefinite, a singular definite form called singulative and, finally, the plural (Sim 1989:104ff.). The case system includes the marked nominative, the absolutive for citation and direct objects, genitive, dative, comitative/instrumental, locative and adessive (Sim 1989:110ff.).

Personal and possessive pronouns have a gender distinction masculine vs. feminine in the third person singular. Demonstratives have three deictic distances.

Verbs are inflected by suffixes, only. A verb form is composed of four morphemes: verb base –person marker–tense/aspect marker–final suffix. The tense/aspect marker is represented by a vowel, which marks one of the three tenses/aspects. The simple perfect is marked by *u* both in H. and Libido. The imperfect and the present perfect are marked conversely, i.e. in H. *aa* is used for the present perfect and *oo* for the imperfect and in Libido *aa* is used for the imperfect and *oo* for the present perfect. Further verb paradigms are the imperative/jussive, two converb and two subjunctive paradigms.

The unmarked word order is Subject–Object–Verb. Special verb forms are used for adverbial clauses.



The Herman Bell ten word list for H. is: *mato* 'one', *lamo* 'two', *saso* 'three', *giira* 'fire', *wo'o* 'water', *eelliinčo* 'sun', *agana* 'moon', *ṭiiga* 'blood', *allabo* 'tongue', *inqe* 'tooth' (Korhonen et al. 1986b).

Joachim Crass

Hadiyya ethnography

The name H. has been used for different ethnic units in southern Ethiopia speaking ↗Cushitic as well as ↗Semitic languages. The groups which are to be labelled H. proper are linguistically part of the Highland East Cushitic cluster and inhabit a region between the 6th and the 8th parallel of northern latitude, reaching from the upper Omo (↗Gibe) to the plains west of Lake Zʷay. This area was allocated the status of a separate administrative zone within the "Southern Nations, Nationalities and Peoples' Regional State" (SNNPRS) in the 1990s. It comprises the seven *wärädas* of Leemo, Miišaa, Sooro, Gibe, Šaašoogo, Duuna and Baadawwaaččo, whereas the Hadiyya-occupied territory of Maaraqo (Libido) west of Lake Zʷay belongs to the Gurage zone. The area inhabited by the H. proper covers ca. 5,000 km² and ranks among the most densely populated parts of Ethiopia, with more than 300 people per km². The total population of the H., whose major subgroups are the Leemo, Wito-Giira (Agara), Sooro, Šaašoogo, Baadawwaaččo and Maraaqo, amounts to ca. 1.5 million.

The name H. has explicitly been used for the ↗Qabeena, who adopted a ↗Kambaata dialect at the end of the 18th cent. The East ↗Gurage-speaking groups of the eastern Gurage (↗Səlṭi, ↗Wəlbaräg, Azärnät, Bärbäre, Wuriro, Wälläne and Gädäbano), who migrated to their present dwelling-areas from the western parts of the ↗Harär plateau in the 16th cent., laid claim to the ethnic label "*seba* Hadiyya" (the seven H.). The most visible cultural peculiarity of all these remnants from the old H. cluster in central-southern Ethiopia was their Muslim background. It inevitably dwindled, the longer their separation from the Islamic centres in the east lasted and the stronger simultaneously the impact of folk religions surrounding them became. The following description is restricted to the H. proper whose habitat and subgroups were defined above.

According to their oral traditions, the H. formerly practised a mixed economy based on the two pillars, livestock-breeding and the cultivation of barley. The presently predominating system of intensive agriculture focused on the so-called false banana (*Ensete ventricosum*; ↗*ənsät*) was not adopted before the middle of the 19th cent. from the Gurage, Kambaata and ↗Wälaytta neighbours. The extraordinary high productivity of this plant has so far saved the H. from serious shortages of food. Because of the dense population the property in livestock per capita has considerably reduced, but cattle, sheep, goats, horses, donkeys and mules continue to be indispensable for providing milk and dung, as well as for ploughing and as means of transport. In areas above ca. 2,000 m A.S.L. the H. rely for their subsistence – besides *ənsät* – mainly on barley, wheat, *ṭef*, horse-beans and cabbage; in regions of lower altitude, maize, *Sorghum bicolor*, finger-millet (*Eleusine coracana*) and sweet potatoes are the most common items of staple food. From the 1950s onwards, coffee and red pepper gained a growing importance as cash crops. In the gardens and fields around the houses, most agricultural works are carried out with digging-sticks and hoes. After the Amhara conquest in the last decades of the 19th cent., the H. peasants additionally adopted the Highland Ethiopian type of plough. These tools fully meet their demands, because the average size of cultivated land per household rarely exceeds two hectares at present. Throughout their history the H. have mainly earned their living as agro-pastoralists, whereas other activities, such as handicrafts and trade, were of minor importance in their economy.

Groups of craftsmen called ↗*Fuga* have immigrated from the beginning of the 20th cent., mainly from the neighbouring areas of Gurage, Kambaata and Wälaytta. They usually observe a division of labour, i.e. the women produce pottery and the men are active as tanners and woodworkers. Male persons of the *Waanča* group are specialized in leather-works, such as saddles. Blacksmiths (*Woqqaç̣ç̣a*), frequently descendants of liberated slaves, produce iron tools mainly employing scrap-metal of European provenance. Weaving is rarely practised by immigrants from Wälaytta and Gamo Gofa. As it is widespread in Ethiopia, the craftsmen are to a large extent socially outcast groups and strictly endogamous, i.e. they are excluded from intermarriage with the so-called *Wolaaba*, the commoners. On the other hand, they are respected as ritual experts and feared because of their alleged magical power.

The original type of H. settlement consisted of beehive-shaped houses which were constructed around enclosures of thorn fences. This pattern has almost completely been replaced by hamlets consisting of the "Gurage type" of cylindrical houses with conical roofs.

Usually, several hamlets constitute a parish of considerable size, inhabited by members of different clans (*sulla*). These are subdivided into lineages (*moollo*) and sub-lineages (*mine*). The different social units are presided over by *dannuuwwa* (sg. *danna*), chiefs who are also in charge of the mutual help organizations (*seera*) for funeral ceremonies, house construction and agricultural works. The rules of descent are patrilineal and the patterns of residence virilocal. Politically, H. society was characterized by an outstandingly egalitarian structure. Centralized hierarchies comparable to the kingships of the Kambaata or Wälaytta never developed, and age-grade systems of the ↗*gadaa* type were likewise absent. The status of an individual largely depended on his personal achievements, i.e. brave deeds in warfare and killing dangerous animals, intelligence and eloquence in public affairs and gaining wealth, particularly a large number of cattle. In such cases so-called feasts of merit were performed and the *mahaaraano*, the honoured persons, received titles (e.g. *dadaaččo*, *azmaač*, *ašan garaad*) and insignia, such as necklaces, earrings and bracelets, manifesting their prestigious position. The whole community praised those "heroes" and "people of merit" with songs and offered them grandiose funerals.

The settlement pattern of scattered groups of houses surrounded by gardens and plantations is adequate to the highly intensive horticulture, which demands a steady care, particularly of the *ənsät*. The so-called villagization program of the Ethiopian government in the late 1980s, aiming at concentrating the population in centralized villages, had, therefore, a disastrous effect on the socio-economic conditions of the H. and was spontaneously discarded after the fall of the ↗*Därg* regime in 1991.

The former socio-religious system of the H., a way of life and code of behaviour called ↗*Fandaanano*, has meanwhile totally disappeared. It was characterized by numerous syncretic elements that revealed the Muslim background of the H. in earlier phases of their history. The high priests (*anǧaamma*), who in former times acted as spiritual leaders of the H. subgroups, have totally lost their influential position. Orthodox Christianity started gaining ground after the Amhara conquest, particularly among those people who, appointed ↗*balabbat*, were expected to co-operate loyally with the new authority. However, a systematic missionary campaign was not conducted by the Orthodox Church before the mid-1940s. Protestant and Roman-Catholic missionaries from Europe and America became active in the 1930s and succeeded in converting most of the H. after the 1960s. Islam became the dominant religion in the lowlands of Maaraqo and Šaašoogo. Although far-reaching changes have resulted in the extinction of the traditional *Fandaanano* way of life, the H. have obviously been developing a growing interest in their cultural heritage since the 1990s (for ill. on H. life s. the articles on ↗Dämära, Fandaanano and ↗Gänna).

Ulrich Braukämper

Hadiyya history

The most ancient Ethiopic document to mention the Muslim principality of H. is the ↗*Kəbrä nägäśt* (BezKebr 127 [text] = 100 [tr.]). A number of Muslim principalities existed between the Somali coast and the eastern escarpment of the Ethiopian highlands. The presumably oldest of them, Šäwa, emerged in the late 9th cent. (s. Cerulli 1941). H. was the westernmost of seven political units connected in a confederation which was named after its capital ↗Zaylaᶜ on the northern Somali coast – the others were ↗Ifat, ↗Däwaro, ↗Arabäbni, ↗Šarḫa, ↗Bale and ↗Dära. Between the 13th and the 16th cent., H. seems to have occupied a large territory between the western Harär Plateau and the eastern escarpment of the Rift Valley, which is now mainly inhabited by ↗Ittuu- and ↗Arsi-Oromo.

The Chronicle of *aṣe* ↗ᶜAmdä Ṣəyon I, while describing his campaign against Ifat, reports that in 1332 the Emperor fought the H. leader (*amano*), who was labelled a "false prophet" by the Christians, forced him to take refuge in Ifat and deported parts of the population to other areas. Three years later a rebellion of H. was suppressed. From this period onwards H. was listed among the dependencies of the Ethiopian Empire, but obviously maintained a certain degree of independence through a system of indirect rule (KrAmdS 2; HuntAmdS 58ff.; PerrAmdS 335).

The fact that H. as a member of the Islamic Zaylaᶜ federation was at the same time tributary to the Christian empire in the 14th cent. was confirmed by reports of Arab historians. In Abū l-Fidā's work *Taqwīm al-Buldān* ('The True Position of the Countries') it was mentioned as a locality with an exact geographical position, where slaves, who had been castrated in a place called Wašlu, were taken for treatment before they were sold to Egypt (Reinaud 1848:329). Ibn Faḍlallāh al-ᶜUmarī repeated this information and referred to H. as the largest and strongest military unit among the seven principalities of the Zaylaᶜ federation, with an army estimated at 40,000 horsemen and twice that number of foot-soldiers (UmMasGaud 15ff.). Details about the economy of the sultanate are also reported. Al-Maqrīzī's *Kitāb al-Ilmām* (*History of the Islamic Kingdoms of Ethiopia*; 1434), in addition to summarizing al-ᶜUmarī's reports, mentions that the Ifat/ᶜAdal *sulṭān* ↗Ḥaqqaddīn II b. Aḥmad Ḥarb Arᶜad once defeated (ca. 1370 A.D.)

the *amano*, prince of H., who fought against him as a vassal of the Christian emperor (MaqIlmam 14ff., 23).

During the 15th cent., H. struggled repeatedly to obtain its independence from Ethiopia. A song in honour of *aṣe* Yəsḥaq (r. 1414–29) refers to victories against rebellious ↗Allaaba and ↗Gudela, who can be identified as subgroups of the H. people. The Chronicle of *aṣe* Zärʾa Yaᶜəqob (r. 1434–68) reported a conspiracy of the H. leader Mahiko, son of *gärad* Meḥmad (Muḥammad). This rebellion failed because another chief, Gadayto, revealed the conspirator's plans to the Emperor and advised him to entrust the governorship of the H. country to *gärad* Bamo (most probably the Boyaamo of the oral traditions), who had been loyal. With the assistance of imperial troops from the ↗Damot province, Bamo conquered the rebels and re-established Ethiopian rule. Sections of the Damot soldiers were then settled as military colonists in H. The Emperor himself married a H. princess, the daughter of *gärad* Meḥmad, who under her Christian name ↗Ǝleni played an important role in Ethiopian history until her death in 1532. Despite such peaceful interactions and marriage links, the relations between the Christian empire and H. remained precarious under Zärʾa Yaᶜəqob's successor *aṣe* ↗Bäʾədä Maryam (r. 1468–78; PerrZarY 16–23, 47, 112, 131).

At the beginning of the 16th cent., the Portuguese traveller Francisco Alvares witnessed the intervention of *aṣe* Ləbnä Dəngəl (r. 1508–40) in the internal disputes of the H. sultanate in the region of Lake Zʷay (BeckHuntAlvar 193, 427f., 430ff.). After the outbreak of the *ǧihād* of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"), ᶜAdal troops invaded H. from the region of Däwaro in 1531/32 A.D. Since the majority of the population of H. were Muslims, they seemed to have joined the conquerors voluntarily, established intensive socio-economic connections with them and supported their northward incursions into the heartland of the Christian empire. During the ᶜAdalite "holy war", considerable parts of the H. population migrated from Harär and present-day Arsi-land to the region of the Rift Valley as far as Kambaata (BassHist 377; BrHad, chs. 3.3.3–3.3.5).

After Aḥmad Grañ's death, *aṣe* Gälawdewos (r. 1540–59) defeated the allied forces of H. and Oromo. An important document concerning the relations of Christian Ethiopia with the H. sultanate is preserved in the Chronicle of *aṣe* Śärṣä Dəngəl (r. 1563–97). In 1568/69 this Emperor won a decisive victory over the H. under their leader Ase, who was supported by ↗Mäläsay, Muslim cavalrymen from the Harär region equipped with cuirasses. Seven years after Śärṣä Dəngəl had left H. in 1570, a new rebellion broke out, incited by *gärad* Ǧaᶜfar, who was killed in action. However, warlike activities, in which the Oromo became increasingly involved from this point on, continued. For political reasons *aṣe* Yaᶜəqob (r. 1597–1603) took a H. princess and treated her as his wife, but she died before the actual marriage (ConzGal 141; CRHist 46–49, 52, 59ff., 67; BeckHuntAlm 59).

In early 17th-cent. accounts the name H. is repeatedly mentioned. From then on the vassalage of this principality to the Ethiopian Empire was only nominal. According to Ludolf (LudHist L, II, 17), however, the Amhara governor of Kambaata held the title "rex Hadiensium", and the maps of that time located H. in the vicinity of Kambaata.

As a principality, H. seems to have existed between the 13th and the early 17th cent. It was weakened by the warlike actions and the consequences of the ᶜAdal *ǧihād* (1527–68) and then disintegrated through the expansion of the Oromo, who largely conquered and assimilated the population of former H. east of the Rift Valley. In the second half of the 20th cent., a strong substratum of people among the Arsi and the Ittuu could still be recognized as having descended from the autochthonous H. population of those areas. It can be assumed that the inhabitants of the sultanate were linguistically heterogeneous, comprising Cushitic-speaking (Hadiyya proper, ↗Allaaba, ↗Qabeena) as well as Semitic-speaking (↗Səlṭi, ↗Wəlbaräg and other East Gurage-speakers ["Adäre"]) groups but sharing a number of common cultural features, such as a strong Muslim impact and an agro-pastoralist economy. In their oral traditions the above-mentioned groups have more or less clearly preserved the claim that their ancestors were representatives of the ancient H. sultanate (BrHad ch. 3.5; Braukämper 2004:55–68).

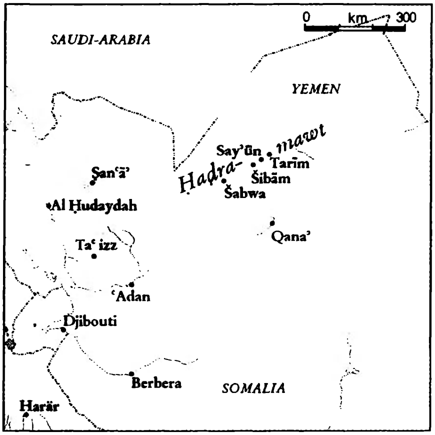
Ḥaḍramawt

The name Ḥ. is applied in its narrow sense to the deeply incised valley (*wādī*) that runs approximately 170 km parallel to the South Arabian coast and extends from the confluence of the Wādī Kasr until just east of the town of Tarīm. In a more comprehensive sense, however, as was also used in antiquity, Ḥ. comprises the plateau and the narrow coastal plain to the south of the large valley and, in the west, the catchment area of the tributary *wādīs* of the Wādī Ḥaḍramawt up to the old capital Šabwa. In the north Ḥ. included the range of mountains merging into the large central Arabian sand desert, and in the east the region around the Wādī Masīla, the south-eastward continuation of Wādī Ḥaḍramawt, as far as the country of the Mahra.

In the Old South Arabic inscriptions, Ḥ. is the name of a South Arabian sedentary tribe (ŠᶜB) and of the country and kingdom inhabited by it. In the native Ḥaḍramitic inscriptions the name is always written in the form ḤḌRMT, that corresponds to the pronunciation of the name in the country itself up to the present day as Ḥaḍramūt or Ḥaḍramōt. This is in accordance with the forms of the name transmitted in secondary sources by Greek and Latin authors: e.g., for the country, Ἁδραμύτα, i.e. *Hadramýta*, in Theophrastus (*Historia plantarum* IX, 4, 2), Χατραμωτίτις, *Chatramotítis* in Strabo (*Geographica* XVI, 4, 4) and, for the people, *Chatramotitae* in Pliny (*Naturalis historia* VI, 154), Χατραμωθῖται, *Chatramōthîtai* in Ptolemy (*Geographia* VI, 7.25) and Χατραμῶται, *Chatramôtai* in Stephanus Byzantinus (after the lost *Arabica* of Uranius). In Arabic the name is vocalized *Ḥaḍramawt*, which might also have been the pronunciation of the form ḤḌRMWT in the Sabaic inscriptions. This form has certainly been influenced by a folk-etymology of the name as consisting of two roots, *ḥḍr* and *mwt*, and meaning 'abode of the death'. The new interpretation arose from records and legends widespread in antiquity that were invented to deter travellers from the allegedly unhealthy frankincense-growing region. In the biblical Table of Nations, where Hazarmaweth (Gen 10: 26) is a son of Joktan and hence the ancestor of a South Arabian people, the Hebrew tradition, too, followed this popular interpretation, whereby *_Ḥaṣ(a)rmōt_, postulated by the Septuagint Ἀσαρμωθ, became *Ḥăṣarmāwet* in the Masoretic text. A satisfying etymology of Ḥaḍramūt or Ḥaḍramōt, respectively, could hitherto not be given. It is, however, certain that *-ūt*/*-ōt* must be considered a suffix, which occurs frequently in the toponymy of south-eastern Arabia.



Numerous prehistoric findings indicate that ancient settlements existed in the *wādīs*, in which artificial irrigation may have been used as early as the end of the second millenium B.C. A dense population is to be assumed for the Wādī Ḥaḍramawt, as well as for the capital of Ḥ., Šabwa, and the seaport of Qanaʾ.

Special importance was attached to Ḥ. because of the possession of the frankincense-producing regions (↗Incense), which especially lay in present-day Ḍofār, from where the valuable resin was brought by an overland route or by sea via Qanaʾ to Šabwa. In spite of its geographical position in the utmost western part of Ḥ., Šabwa became the capital of the ancient kingdom, since it was from this point that the caravans started assuring the transport of the frankincense along the west coast of Arabia to the markets of the Mediterranean. The capital had also a significance as a cult-centre, for the main Ḥaḍramite deity, the moon-god SYN, Siyān/Sīn, whose name was borrowed from the Babylonian religion, had his principal temple ʾLM, Alīm, there.

The earliest epigraphical Ḥaḍramitic documents go back to the 8th cent. B.C. The first attestation of Ḥ. outside its own country is found in the Old Sabaic inscription RES no. 3945, a record of Karibʾil Watar from the early 7th cent. B.C., in which the Ḥaḍramite king Yadaʿʾil is mentioned as ally of the Sabaean king. In the 4th cent. B.C., when the Minaeans started to control the caravan route to the north, the king of Ḥ. became – probably because of commercial interests – a confederate of Maʿīn. The Ḥaḍramitic inscription RES no. 2687, engraved on the fortification wall of al-Bināʾ along the road connecting the harbour of Qanaʾ with Šabwa towards the end of the 1st cent. B.C., provides an account of the efforts that Ḥ. made at that time to defend its territory against the Ḥimyarites (↗Ḥimyar), who had gained ground on the South Arabian coastal strip. The Ḥaḍramite kingdom reached its largest expansion after it had annexed, to the west, the remaining parts of the former Qatabān in the second half of the 2nd cent. A.D.

The subsequent period was marked by continuous warfare and hostilities with the Sabaeans and Ḥimyarites, in the course of which, in the first quarter of the 3rd cent. A.D., the Sabaean king Šaʿirum Awtar even succeeded in conquering the Ḥaḍramite capital Šabwa. During this phase of conflict between the two South Arabian kingdoms at the time of Šaʿirum Awtar, Abyssinian troops even marched from the western coastal plain into the Yemeni highland and encamped in the neighbourhood of Ẓafār (Ja 631/21f.), while from the southern coast detachments and auxiliaries of the Aksumite army campaigned against Ḥ. (Ry 533/21f.) as allies of the Sabaeans. Towards the end of the 3rd cent. the Ḥimyarite king Šammar Yuharʿiš subjugated Ḥ. and unified South Arabia into a large realm. Henceforth he and his successors used a title claiming Ḥ. as part of their dominion. Efforts of indigenous princes in the following decades to regain the independence of Ḥ. met with failure.

When, in the year 518 or 523 A.D., the persecution of the Christians in ↗Naǧrān began, resulting in the Ethiopian invasion of Yemen, martyrs had also to be lamented over in Ḥ. (ḤṢRMWT), according to an anonymous Syriac letter attributed to Simeon of Bêṯ Aršâm (Shahîd 1971, IVf. [II.B], 45); in the table of contents of the fragmentary Syriac *Book of the ↗Ḥimyarites*, both the burning of the holy church and the martyrdom of the holy martyrs who suffered in the town of Ḥ. are mentioned (ḤṢRMWT; Moberg 1924:xxxf.).

King ↗Kaleb Ǝllä Aṣbəḥa, the conqueror of Yemen, added to his titles Ḥ. in an Old Ethiopic inscription from ↗Aksum written in monumental South Arabic (RIE no. 191.9). ↗Abraha, the Ethiopian viceroy in Yemen and the last ruler bearing the title of king of Ḥ. in CIH 541.7, according to the same Late Sabaic inscription, waged war on Ḥ. towards the middle of the 6th cent. He should have also founded a few churches in Ḥ., together with St. ↗Gregentius, archbishop of Ẓofār.

Among the Yemeni immigrants into Ethiopia in Islamic times there were also Muslims from Ḥ., who settled in the eastern part of the country and especially in the region of Harär, where they were eager to convert people to ↗Islam, took action in the movements of *ǧihād* and fought in the army of ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ).

Hagär Fəqər Tiyatər

The Ethiopian Patriotic Association (E.P.A.; **የሀገር፡ ፍቅር፡ ማህበር**, *Yähagär Fəqər Mahbär*) was founded in July 1935, on the eve of the Italian invasion of Ethiopia. Its chief inspiration was *ato* ↗Mäkʷännən Habtäwäld, then Director-General of Commerce and Communication. It was established primarily to do agitation work among the population, drawing on the resources of such influential writers as *blattengeta* ↗Wäldä Giyorgis Wäldä Yoḥannəs and *qäññ geta* ↗Yoftahe Nəguśe, who wrote exhortative tracts. In addition, powerful speakers roused the population at rallies held on Sundays, when arms were also collected to help the war effort. Subsequent to the Italian victory and the occupation, the association was disbanded. But some members continued the struggle as *yäwəsṭ arbäññočč* (↗Patriots). Mäkʷännən and Yoftahe, who chose exile, founded kindred organizations in France and Sudan, respectively.

Restored after the Liberation in 1941, the E.P.A. moved to its current premises, which was originally an Italian officers' club. Initially, it continued with its program of speeches on the unity and freedom of the country, with Mäkʷännən Habtäwäld as the regular speaker. A dominant theme of his speeches was the need for Ethiopians to engage in trade and investment. Subsequently, it was felt that one should diversify the activities of the association by providing entertainment to the public. A musical band playing traditional instruments was set up and it staged its first show in February 1942. Instrumental in this transformation were ↗Bäšah Täklä Maryam and Iyoᵓel Yoḥannəs. The latter not only distinguished himself as a singer, but also served as director until 1975. National celebrities like Ṭəlahun Gässäsä also started their careers here. This process of transformation culminated in the change of the name of the centre to H.F.T. (**ሀገር፡ ፍቅር፡ ቲያትር**) in 1957/58. It thus emerged as a pioneer of modern music and drama, touring, not only the provinces, but also staging performances abroad, including representing the country at the International Negro Art Festival in Dakar in 1966. It also provided night-club entertainment and engaged in the publication of two Amharic magazines, successively ↗*Mänän* and *Hagär Fəqər*.

Bahru Zewde

Hagärä Sälam

H.S. (**ሀገረ፡ ሰላም**, lit. 'Land of Peace') is the name of several localities in Ethiopia.

According to the "short chronicles", H.S. was a location in Bägemdər (close to ↗Aringo) used as a base by several Gondärine rulers. *Aṣe* ↗Fasilädäs left his residence in ↗Gondär in 1660 to spend most of the year in H.S., before he went to fight the Hankaša Agäw in Goǧǧam. ↗Iyasu I retreated to H.S. in 1698. Both the "short chronicles" and the royal chronicle of *aṣe* ↗Bäkaffa report that in 1724 H.S. became the place of retreat for the Emperor while he was waiting for *bitwäddäd* Täsfa Iyäsus and *bağərond* Mammo to put an end to the rebellion of ↗Gubala in Lasta. On 8 December 1729 Bäkaffa once again entered H.S. and stayed there, without his court, till 24 January 1730 when he returned to Gondär.

Another H.S. is located 40 km north-west of Mäqälä, in Tämben, Təgray. The settlement is today the main town of Dəggəᶜa Tämben (the capital of Qʷälla Tämben being ↗ᶜAbiy ᶜAddi) and of H.S. *wäräda*. It was founded in 1943 A.M. [1950/51 A.D.] by *däǧǧazmač* Gäbrä Ḫəywät (Gäbru) from Siḥäta (ᶜAgamä) in the ↗Mälfa area. He also laid the foundation stone for the church dedicated to the Saviour of the World (Mädḫane ᶜAläm) in 1948 A.M. Twice in the course of history did the land of H.S. become the seat of Təgrayan rebel government, once of Kaśa Mərč̣a (the future ↗Yoḥannəs IV, who was also baptized and grew up in the Mälfa area) and over a century later of the ↗Tigray People's Liberation Front. Many more important historical personalities came from or are connected with the area, e.g., *bağərond* ↗Lawṭa who was born in Ḥarena. Pre-historic stone-tools have been discovered on the archaeological site of May Bäᵓatti next to H.S.

The largest of today's H.S. lies on the mountain ridge on the edge of the fluvial basins of Lake Abbayya, of the Dawa and of the Gänale rivers in ↗Sidaama. It belongs to the first generation of ↗*kätäma*-towns built on high ground by Mənilək II's generals at the time of the conquest. It was founded by *däǧǧazmač* ↗Balča Safo, who used it as one of his residences (↗*Gəbbi*) when he subjugated the region at the end of the 19th cent. H.S. never had any important administrative functions, which were carried out by ↗Yərga ᶜAläm and later by ↗Awasa. Too distant from the main Awasa–Moyale asphalted road, it is a mere halt on the gravel road leading to Kəbrä Mängəśt, Nägäle and Dolo. The town often suffers from cold and dampness due to its high altitude while Awasa enjoys a mild climate on the shore of its lake.

The growth of H.S. is recent: in 1938 it had 2,000 inhabitants (s. *Guida*) and in 1984 2,676 (CSA 1984). No doubt it was the consequence of unrest in the highlands of neighbouring Bale at the end of Ḫaylä Śəllase I's reign and at the beginning of the ↗Revolution. In 1998 the population was 6,369 (CSA 2000) and in 2003 it reached 7,733 inhabitants (CSA 2004).

Before the administrative reform of 1991, H.S. belonged to the ↗Sidamo *awrağğa* (Sidamo region). Today it is the capital of the Hula *wäräda* (Sidaama Zone, Southern Nations, Nationalities and Peoples' Regional State). The Hula *wäräda* (411.4 inhabitants/km²) is mainly populated by Sidaama peasants, who grow ↗*ənsät* and coffee, which has become their main source of income.

Haggenmacher, Gustav Adolf

H. (b. 3 May 1845, Island Limmatau, Aargau, Switzerland, d. 18 November 1875, near Lake ʿAssal, Tağūra) was an Egyptian official known for his early exploration of Somali regions. He was an agent of the Egyptian intelligence services, who had to explore the "Abyssinian border regions" of the Red Sea governorate, extending from Sawākin to Zaylaʿ.

H. arrived in Egypt in 1865 and first carried out commercial activities in Kassala, where he married. He was hired by the Egyptian governorate-general of the East Sudan and the Red Sea Coast and moved to Massawa as a confidant of governor ↗Munzinger *bāšā*. In 1873 H. represented the governorate at the World Exhibition in Vienna, accompanied by several locals and exhibiting native products. In 1874 he was appointed Munzinger's secretary and his representative in Kassala and became responsible for the governorate's intelligence services.

Among others H. was charged with the production of maps of the borders, which he delineated "quite arbitrarily", as he himself admitted. These maps served as a basis for the Egyptian territorial claims in the Ethiopian border regions before the Egyptian–Ethiopian war of 1875/76. Then, when Egypt planned a massive extension of her spheres of influence, the *ḫidīw* ↗Ismāʿīl *bāšā* charged H. with a mission to Somaliland in 1874. From Berbera he travelled to the south and reached Libaheli (8°40'N). Officially this was meant to expand geographical knowledge of virtually unknown Somali regions, including trade routes to Harär. Unofficially, the journey had the political aim of exploring Egypt's chances for expansion. H.'s geographical report was published in 1876, but his political report to the *ḫidīw* remains unpublished and is possibly still kept in the Egyptian State Archives. In October 1875 H. was ordered to join the Egyptian expedition to Šäwa via Awsa under the command of Munzinger, which, however, in the night of 14/15 November was attacked at the ʿUddumma lake in Awsa by order of the Awsa *sulṭān*. H. died of thirst and hunger on his flight back through the desert.

His son, the "black Konrad", born in Massawa, educated in Switzerland and Germany, went to *aṣe* Mənilək II's court on the initiative of Alfred ↗Ilg in order to serve Ethiopia. Later he became an employee of the German colonial railways in Tanganyika.

Hagiography

H. is a term describing literary products related to the veneration of the ↗saints. In Ethiopian context, H. encompasses a number of genres, or different types of texts: Vita, or Acts (↗*Gädl*), Miracles (↗*Täʾammər*), Homilies (↗*Dərsan*), ↗hymns and hymnological compositions of different kinds, accounts about the translation of relics, and a number of smaller texts like monastic ↗genealogies, prayers and inscriptions (↗Painting; ↗Equestrian saints) etc.

In Ethiopia, the veneration of some of the most famous saints and martyrs certainly goes back to the early period of ↗Christianity. Hagiographic texts are found among works translated from Greek during the Aksumite period: e.g., Vitas of ↗Anthony the Great and Paul of Thebes, Passions of Mark the Evangelist and Arsenofis (s. BrakKirche 166ff.), of Euphemia, Philea and some others (s. Bausi 2002:15–18). These works are known to us from hagiographic collections contained in manuscripts from the 14th cent. at the earliest. A few other ancient hagiographic works are styled as homilies (*dərsanat*), and are chiefly transmitted in the celebrated ms. EMML 1763 (1336/37 or 1339/40 A.D. from ↗Däbrä Daga Ǝsṭifanos): in honour of Fəremnaṭos/Frumentius (originating possibly from a Greek source, s. Getatchew Haile 1979; *abba* ↗Sälama Käsate Bərhan), *abba* ↗Mäṭaʿ by a certain Elyas ("bishop of Aksum", s. Getatchew Haile 1990; Bausi 2003:xxivff. [tr.]), *abba* Yoḥanni by Bishop Minas, Ǝllä Aṣbəḥa (↗Kaleb) etc. – at least some of them written by Ethiopians, all antedating the mid of the 14th cent. There could have been some other early Ethiopian hagiographic compositions, but all of them were either lost or absorbed by later works.

Translated H. enriched ↗Gəʿəz literature, linked it to the Mediterranean Christian world and contributed to the post 14th-cent. development of Ethiopian H. In the 14th cent. Ethiopic literature adopted the ↗*Gädlä sämaʿtat*, a huge collection of passions established according to the days of the Church ↗calendar (s. Bausi 2002: 2–7). The core of the work was translated from Arabic, but in the course of time it embodied other pieces of H., among which, obviously, also a few translated from Greek in Aksumite period. The *Acts of the Apostles* (↗*Gädlä ḥawaryat*) must also have exercised considerable influence, as well as the ↗*Sənkəssar*, translated from Arabic ca. 1400. For the later period, some occasional influences of other (e.g., European) hagiographic traditions are recorded (cp. BeckHuntAlm 308–14; on the Gəʿəz version of the *Passio s. Sebastiani*, s. Conti Rossini 1927).

The intensive growth of Ethiopian H. must have started in the period of the late 14th–early 15th cent., and in the subsequent century most of the important Ethiopian hagiographic works (first of all Vitas) were composed. This growth was closely linked to the development of the Ethiopian ↗monasticism, on the one hand and to the increased role and local veneration of Ethiopian ↗holy men, on the other. Likewise, H. was bound to the coeval flourishing Gəʿəz literature. During the 16th cent., hagiographers gradually shifted from creating new works to revising and reproducing the old ones (the most recent texts known being the Acts of ↗Sayfä Mikaʾel, ↗Abranyos and the Miracles of ↗Zärʾa Buruk, from the first half of the 18th cent.).

On the whole, Ethiopian H. was more dynamic than Ethiopian ↗historiography: all extant types of hagiographic texts emerged prior to the formation of the classical type of the royal chronicles. The dominating and most important kind of hagiographic composition became the Vita. There are a few examples of hagiographic works entitled *dərsan*, but within Ethiopian H. the homiletic genre appears to be less prominent, its original panegyric function being not clearly defined (*dərsanat* in honour of Ethiopian saints, are, in fact, not very different from Acts, many of which include passages of a homiletic nature).

In their literary methods and attitudes, Ethiopian hagiographers did not substantially differ from their colleagues of other Christian Oriental traditions. Ethiopian hagiographers based their accounts on generally similar ideas about what elements the life of a holy man – male or female – should include (cp. an overview of the *topoi* in Cerulli 1969:i–xviii [tr.], and Marrassini 1981:x–lx). Thus, biographies of Ethiopian saints contain many similar elements, while demonstrating a remarkable diversity in their literary shape: they range from brief and rather modest accounts, composed of a few episodes and written in a simple style, to lengthy and highly elaborate masterpieces. The hagiographers had the ↗Bible as the primary source of literary material and ideas; besides, they relied extensively upon other H., apocryphal and monastic literature, liturgical texts and oral traditions.

The Vita of a saint can be either a part of a larger hagiographic collection (e.g. the *Gädlä sämaᶜtat*) or an autonomous work; and be transmitted, in manuscripts, either by itself or with a few other relevant pieces such as a homily in his honour and a collection of his miracles (e.g., the popular Acts of ↗Gäbrä Mänfäs Qəddus; Marrassini 2003), as well as a *translatio* account – even though this gender is rather uncommon in Ethiopia (for some remarkable examples s. Getatchew Haile 1990; Id. in EtRicci; Nosnitsin 2003). The writing of a Vita marks the foundation of a "hagiographic dossier". Exceptionally, miracles may be composed of (posthumous) wonder-tales in subsequent series, each introduced by a short homily for the corresponding annual feasts of the saint (as is the case of the Acts of Täklä Haymanot). In several instances, the hagiographic dossier is also complemented by ↗*mälkəʾ* hymns, and/or by a monastic genealogy of the saint (if not already included in his Vita). The Vita frequently antedates the Miracles; the creation of some (or all) of these texts may often take a number of years and be achieved by more than one author. With quite a few remarkable exceptions, most Ethiopian saints enjoyed local veneration, their H. (first and foremost the Acts) circulating in a limited area and being usually represented in a small number of manuscripts. Yet, for many of those saints one should further consider both the memorial readings in the *Sənkəssar* (most of them having entered the latter's "second recension", between 1559 and 1581, s. Colin 1988:312), followed by ↗*sälam* hymns, and the interlinked material from such works as the ↗*Ǝgziʾabəḥer nägśä* and other – sometimes very numerous and extensive – hymnological compositions.

For the period indicated above, the number of hagiographic works created in Ethiopia is considerable; the number of the known Acts of Ethiopian saints goes alone beyond 200 (cp. KinBibl; EMML catalogues). ↗Cerulli proposed to distinguish five "hagiographic cycles", with reference to Vitas sharing common elements, mostly in the subject: 1) the cycle of the "five dissident monks" – those who participated in the controversy with *aṣe* ↗ᶜAmdä Ṣəyon I; 2) the cycle of the kings of the ↗Zagʷe dynasty; 3) the cycle of the ↗Nine Saints; 4) "the cycle of the founders" – Iyäsus Moʾa and Täklä Haymanot; 5) "the cycle of the south" – Gäbrä Mänfäs Qəddus and Yoḥannəs "the Oriental". However, the growing amount of hagiographic material is moving the focus onto the importance of the "centres" that produced hagiographic works, while sharing ideas, ideology, attitudes and some literary features. This classification cannot cover all the known Acts, yet it seems possible to speak of the H. of the ↗Stephanites, the followers of Ǝsṭifanos in ↗Gundä Gunde; the existence of the H. of ↗Ewosṭateans can be positively assumed (LusStud), at least for the works produced in ↗Däbrä Maryam and other Eritrean monasteries. The H. of the Nine Saints is centred around ancient monastic foundations near Aksum (but includes Acts of ↗Zämikaʾel Arägawi created at ↗Däbrä Damo). In the south, quite a number of hagiographic works originated from the scriptorium of ↗Däbrä Libanos of Šäwa, the literary influence of which extended to several monasteries in the neighbouring regions. The communities on Lake Ṭana also created quite a number of hagiographic works.

While historiography was mostly confined to the royal court, H. had a more popular basis, being created in ecclesiastical circles, in particular the numerous monastic communities scattered throughout Ethiopia. It is a well-accepted fact that monks composed hagiographic works, not only for the immediate need of promoting the cult of the saints (frequently founders and abbots of the respective monasteries), but also for securing monastic rights and privileges and achieving their own goals within the political situation of the Ethiopian feudal monarchy (KapMon 1–14). Nonetheless, it should be remembered that the Ethiopian hagiographic production was prompted by the omnipresent role that the veneration of saints had in the local culture and the mentality of the faithful, both of the elite and the populace. In this respect, the function of H. was manifold. For a long time hagiographic works (especially Vitas), centred around the image of saintly miracle-makers, were the most important tool for edifying the commoners (the absolute majority of them being illiterate) and conveying to them Christian ethics more clearly and conveniently than could be done with any other books of Church literature. People listened to H. during the liturgy and saw the images of the saints in the churches. Oral legends about saints in vernacular languages, originating from and/or interacting with the written H., were circulating among the people; in this respect the miraculous stories (*täʾammər*) being less "official" than

Acts, proved to be particularly attractive. In the absence of fiction, both translated and indigenous H. were to meet not only religious, but also aesthetic and, to a certain extent, intellectual needs of its audience: through H. the Ethiopians used to acquire the knowledge of their own and the universal Church history – about other Christian traditions and other countries. Thanks to H., the images of the most popular saints, both non-Ethiopians (like ↗George of Lydda, ↗Gäbrä Krəstos, ↗Fasilidäs, ↗Qirqos, ↗Menas, ↗Susənyos; Anthony the Great, ↗Pachomius, ↗Shenute etc.) and Ethiopians (Täklä Haymanot, ↗Ewosṭatewos, ↗Samuʾel of Waldəbba, Gäbrä Mänfäs Qəddus, ↗Zena Marqos and a few others) exercised strong spiritual influence across regional and ethnic borders, contributing substantially to the spread and preservation of the Ethiopian Christian tradition and culture.

Ethiopian H. appears to be a challenge for Ethiopisants, due to both the great number of works and their specific features. Like any other form of traditional culture, it was never supposed to preserve historical accounts. In order to extract historical information, hagiographic material should undergo a complex analysis, with the time of the composition, possible attitudes of the hagiographer and literary features taken into consideration (cp., e.g., Marrassini 1981, Fiaccadori 1988). E.g., Acts range in their shape from almost biographical accounts (some of them written soon after the death of the saint by his disciples), as in the case of, e.g., those of ↗Filəppos and ↗Yoḥannəs of Däbrä Bizän, ↗Abäkärazun, ↗ᶜƎzra or ↗Isayyəyas, to a kind of "religious romance", like the Acts of *abunä* ↗Täklä Haymanot (Conti Rossini 1936–37:409). In general, Ethiopian H. is indeed a most valuable source, providing a large amount of positive information (Taddesse Tamrat 1970; Marrassini 1992), which is indispensable for the reconstruction of social and political history of the region (cp. TadTChurch; Ricci 1979:40–75; KapMon) from recent periods back to the Aksumite age (cp. Bausi 2003).

The Ethiopian H. attracted the attention of scholars somewhat later than the Ethiopic Bible and historiography: the Acts of *abba* ↗Yoḥanni of Däbrä ᶜAśa appears to be the first Vita of an Ethiopian saint entirely edited in its original text and translated into a European language (Basset 1884). Starting from the early 20th cent., the number of editions was growing quickly, in particular thanks to the efforts of ↗Turaiev, ↗Guidi, ↗Conti Rossini and others, who applied to Ethiopic H. the full set of "Bollandiste" methods of critical H. (e.g., TurIz; Conti Rossini 1936–37; 1938). Yet, both then and in the later time, the studies were mostly focusing on the edition, often with little or no scholarly discussion (↗Corpus Scriptorum Christianorum Orientalium; ↗Patrologia Orientalis), rather than on the comprehensive analysis of the works. Later contributors to this field were Cerulli and Ricci; more recently, Kur, Marrassini, Beylot, Colin. The work on collecting, systemising Ethiopian H. and including it in the broader context of hagiographic studies continues (s. BHO, EncSan), but an up-dated overview still remains a desideratum. Muslim H. in both Arabic and vernaculars became recently an object of scholarly interest (s. Miran – O'Fahey 2003; ↗Arabic literature), but still remains largely unexplored and unedited (with a few exceptions, as in the case of *šayḫ* ↗Ḥusayn).

Hağira

H. was the consort of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ). According to the *↗Futūḥ al-Ḥabaša*, she was first the wife of Täklä Haymanot, a Christian garrison commander in ↗Bale, captured by the *imām* during one his campaigns in Bale in ca.1530. Later, she became the concubine of Grañ, who gave her the name H. She bore him at least one child and accompanied him during his campaign.

H. is mentioned further in the account as a cousin of *Aybis* Lahaṭī, a nobleman of Qäwät in northern ↗Šäwa and a relative of the Emperor, who adamantly refused to convert to Islam when ordered by the *imām*. His steadfastness earned him the admiration of the latter, although later he embraced Islam under threat from his followers, who had already converted, only to return to his former faith shortly afterwards.

Ḥagos Täfäri

Däǧǧazmač Ḥ.T. (ሐጎስ፡ ተፈሪ) was one of the leading officials of ↗ᶜAgamä in the late 19th and early 20th cent. Very little is known about Ḥ.T.'s background. In the early 1890s he began to play an active role as an officer of *ras* ↗Səbḥat Arägawi. This alliance was, however, short-lived and he soon joined the supporters of *šum ᶜagamä* ↗Täsfay. Ḥ.T. repeatedly switched his allegiance between the two until the Italians arrived in the region. At this time he offered both *ras* Səbḥat and *šum ᶜagamä* Täsfay his services and fought against the Italians. After an altercation with the Italian border commission – who were responsible for demarcating the boundary between the Italian colony of Eritrea and Ethiopia – he was recalled to Addis Abäba and sentenced to confinement at Amba Śəllase, ca. 130 km north-north-east of Ǝnṭoṭṭo. Nothing is known about him thereafter.

Hairstyles

Ethiopian traditional H. are comprised of a variety of designs prepared through oil, henna, mud and ash, and accentuated with a variety of objects including wooden combs, beads, foliage, ostrich feathers, and head clothes that frame the head and face. H. often indicate a great deal of information about the wearer (his or her age, class, gender, religious background, institutional affiliation, and social status) to those familiar with the local designs and their associations. A H. is rarely worn isolated, but it is one part of an ensemble of body art practices that may include ↗jewellery, ↗clothing, scarification, tattooing (↗Body ornamentation), and ↗henna designs.

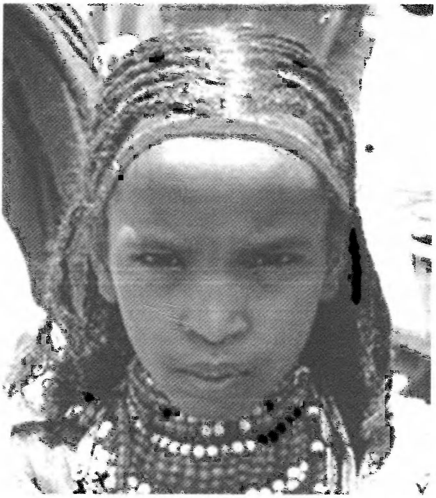

Fig. 1: Oromo girl with a typical hairdo; photo courtesy of the author

As a person moves from childhood through adolescence to old age, he or she undergoes both physical and social changes. These life passages are often announced visually through hair dressing due to its unique sculptural properties. Hair is a suitable marker of transformation as it can be molded, teased, flattened, twisted, braided, and coloured in a matter of hours, cleaned, and redressed again. If the results are still not satisfactory, hair can be cut for a new style. Since hair, unlike other parts of the body, is porous and malleable many societies have crafted it to reflect their aesthetic and moral ideals.

Girls in many places in Ethiopia are given their first haircut as soon as they have sprouted a full head of hair. Among female infants in the Highlands, the centre of the head is often shaved, leaving a round tuft of hair at the crown to continue to grow and sometimes allowing a thin outer ring of hair to continue to grow. For boys a round tuft of hair is left at the front of the crown and the remaining hair is shaved. These two distinctive H. communicate the sex of the baby to any onlooker regardless of the child's clothing or jewellery.

Central to childhood and adolescence for females throughout Ethiopia is the braid. Girls and young women throughout the country wear braids in a variety of styles.

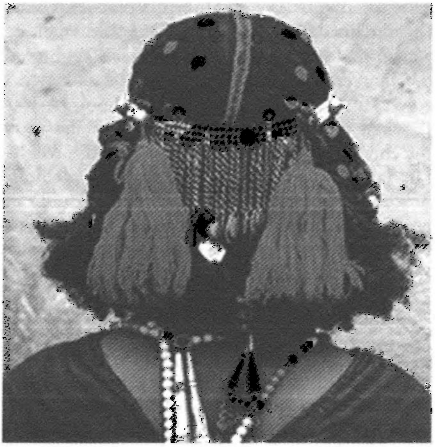

Fig. 2: Argobba girl; photo courtesy of the author

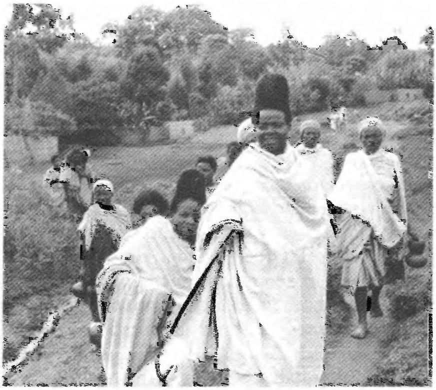

Fig. 3: Dorze women on the way to market, in the front wifes of *halaka* (local leaders) with typical hairdress greased with butter; photo 1954/55 by Helmut Straube; courtesy of the Frobenius Institut, Frankfurt am Main (27-Str109-20)

The young ↗Oromo girl in fig. 1 wears typical braids tightly fitted to her scalp and worn open at the bottom. Her hair has been divided down the middle and the braids are allowed to hang loosely to the ears, framing the face. A modified version of this style found throughout the Highlands consists of five or more braids woven from the front of the scalp back to the nape of the neck. The bottom of the hair may be braided or left free. Some girls in Eastern ↗Harärge cut their hair short on top, leaving a puffy pillow of hair at the top of the head surrounded by shoulder-length braids. ↗Argobba girls, on the other hand, commonly sport two or three layers of braids that fall about the face in a stepped pattern.

Among married women in the south-west, all head hair is shaved off once a woman has given birth to her first child. Among the ↗Añwaa, this signals to others that the woman has matured and can participate more fully in social and political affairs. Before their children come, Añwaa women wear sculptural, asymmetrical H. that mirror the patterns of the clay pipes that they smoke.

For men, adolescence is a time to try new H. and to decorate the hair with ornaments and butter. As the late teens were by tradition a time for a young Ethiopian man to become educated and/or initiated into their respective communities, they would often allow their hair to grow full and high. One common style is simply a rounded Afro that is fluffed daily with a comb. Another popular style includes close-cropped hair on the sides and long hair in the front and on top.

In places where age grade societies once flourished, H. and hair ornaments marked the age grade level and occupation of each man. For instance a warrior in the ↗*gadaa* system would wear his hair long and tucked under with applied mud and butter. In pastoralist societies in the south-east, great attention is given to coiffure. Young men between the ages of 15 and 22, for example, enter into a new age grade in which they begin education in warriorhood and live outside the village in closely knit fraternities with others of their age group. A fearless and brave young man will be rewarded with ornaments, including ostrich feathers to adorn the hair. During this stage of life, young men take great pride in their hair, spending idle hours packing mud or rancid butter onto one another's hair. Men generally travel in pairs so that each may help the other in daily hair maintenance and special wooden headrests are one of the few implements these young men will carry in order to keep their hair intact. If a headrest is not available, a young men will sleep in a sitting position to avoid ruining their H.

Warriors throughout Ethiopia have used their hair as a marker of their power and prestige. Historically, during periods of warfare as men gathered in forested areas for military training, their hair could not receive proper care. This matted and dreaded style became an indicator of a man's training in the wilderness and his ability to withstand the comforts of family life. His hair also alluded to the temporarily dangerous period of war likely marked by bloodshed and tragedy.

But dreaded H. also have other connotations. Worn by Muslim or Christian male elders, long dreadlocks can signal holy men who devote themselves to a spiritual quest. Further, when dreadlocks are worn by children, it might suggest a parent's attempt to divert attention away from the child's faces and thus, protect them from the evil eye of a stranger.

Hairdressing often completes the H. One of the most crucial elements of a married woman's hairstyle among Argobba, ↗Harari, ↗Hawiya, and Oromo women in ↗Harär is a black, woven hairnet. The most common style of wear is when unbraided hair is pulled back to form two balls that are tied at the nape of the neck and covered with the net. Its use came into Harär society sometime before 1850. An early drawing by the explorer Richard ↗Burton (1987:16) shows an urban Harari woman with this hairnet and H. Fig. 2 exhibits a decorative hairnet worn by an Argobba woman and decorated with a metal headband and red, fibre tassels to complete her braided coiffure.

Ḥākim b. Ibrāhīm b. Aḥmad

Āw Ḥ. (حاكم بن ابراهيم بن احمد) is a saint in ↗Harär. Ḥ.'s tomb is venerated on top of Mount Ḥākim, south of the town. A document kept at his sanctuary states that he arrived from ↗Arabia on 26 September 1239 and shows his genealogy as going back to the nephew and son-in-law of the Prophet Muḥammad, ᶜAlī b. Abī Ṭālib, through the sixth *imām* of the Šīᶜa, Ǧaᶜfar aṣ-Ṣādiq. Although such a genealogy appears too long for a person who lived in the 13th cent., 1239 could still be the correct date since the genealogy has several repetitions and it could be shortened. According to Robecchi Bricchetti, Ḥ. was the father of two saints, *āw* Zerbay and ↗Ibrāhīm Abū Zaḥarbūy. The former may be identified with *āw* Zarbīt (Zarbīn), mentioned in the ↗*Fatḥ Madīnat Harar* as a companion of the national saint of Harär, ↗Abādir ᶜUmar ar-Riḍā. This would point to Ḥ.'s flourishing in the 13th cent., too. However, the fact that the second saint lived in the first half of the 15th cent. rises some doubts on the exactitude of the above-mentioned date.

A legend tells that, as a child, Ḥ. lived with his parents in ↗Zaylaᶜ. He had a chicken which became his daily companion. One day, when he was in the Qurʾān school, his father slaughtered the chicken and his mother cooked it as a medicine. When Ḥ. came back from school, he was shocked at what happened. However, he took the chicken out of the pot and restored it to life. His father, also a saint, noticed the miraculous power of his son and told him that it would not be good to have two saints in the same place. Hence, Ḥ. moved to Harär. From this legend, along with the fact that his brother Ibrāhīm Abū Zaḥarbūy is venerated in Zaylaᶜ, one may conclude that Ḥ. came to Harär via Zaylaᶜ.

Ḥakunu

Ḥ. (also *ḥanuku*) was a monetary unit. The etymology of the term is uncertain. Perhaps Ḥ. is to be connected with the term for a piece of ↗iron or ↗salt (UmMasGaud 14f., no. 4.). According to Ibn Faḍlallāh al-ᶜUmarī (d. 749 H. [1349 A.D.]), the inhabitants of four of the seven southern Muslim trading states, ↗Däwaro, ↗Arabäbni (Arᵓen), ↗Hadiyya and ↗Šarḫa, did not conduct their trade with Egyptian money (dirhams and ↗dinars), as in ↗Ifat, but used as coinage iron plates called Ḥ. It is reported that these small pieces of iron were of the length of a needle and their thickness was of three needles. A cow could be bought for 5,000 of them and a goat for 3,000. The value of 3,000 Ḥ. was equivalent to one dirham. Al-ᶜUmarī's accounts were repeated by the Egyptian encyclopaedist al-Qalqašandī (d. 821 H. [1418 A.D.]) who, however, stated that 7,000 Ḥ. were needed to purchase a good cow. The historian al-Maqrīzī (d. 845 H. [1442 A.D.]), following al-ᶜUmarī, vocalized the term as *ḥanuku* explicitly and gave also the abovementioned examples. Furthermore, the usage of Ḥ. is attested by Almeida's report from the first third of the 17th cent. He related that, apart from the use of gold, such small pieces of iron circulated as money in Hinnaryo (↗Ǝnnarya). They were described as "light and flat, two inches wide and three long" and thus larger than the Ḥ. of Däwaro in the 14th cent.

Ḥalay

Ḥ. (ሐላይ; 15° 1' N, 39° 20' E, s. map for Ḥalḥal) is a village in northern ↗Akkälä Guzay, in the district of the Däqqi Dəgna, at the very edge of the highlands. In local genealogies, it is listed among the settlements of the Zəban Bur. Ḥ. was founded in the 17th cent. Travel reports mention Ḥ. and ↗Dəgsa as the first villages to be reached on the caravan route of Taranta, linking Ḥərgigo on the coast with the eastern edges of the highlands (the Akkälä Guzay–ᶜAgame route). As a market place at the borders of the Ottoman influence domain, Ḥ. naturally had some Muslim inhabitants.

When in the mid-19th cent. the movement of conversion to ↗Catholicism started, it particularly involved regions peripheral for the Ethiopian Orthodox Church, and Ḥ. was one of the villages to convert. Giustino De ↗Jacobis, the then-persecuted founder of the mission, died in 1860 near Ḥ. in Aligäden valley. Ḥ., together with neighbouring Dəgsa, ↗Ḥebo and ↗Akrur, became one of the centres of Catholicism.

When in 1887 the Italians at Massawa had decided to move further inland, two battalions were named "Ḥ." by General Asinari di San Marzano. Ḥ. was included in the Italian possessions at the end of the 1880s. In a secret treaty of 1889, *ras* ↗Mängäša Yoḥannəs of Təgray, hoping for an alliance with Italy against *aṣe* Mənilək II, ceded Ḥ. to the Italians together with Sägänäyti and Asmära. The treaty was never brought up, as about the same time Mənilək recognized these new Italian possessions in the Treaty of ↗Wəčale (Art. IV), allying himself with Italy. Due to its prominent position at the edge of the highlands, Ḥ. was chosen for a fort, built in 1890. Four years later, the inhabitants of Ḥ., used to local autonomy, participated in the anti-Italian revolt led by the Catholic governor of Akkälä Guzay ↗Bahta Ḥagos. In December 1894, in the battle of Ḥ., Bahta was killed, while his 1,600 poorly armed men were besieging the Italian fort of Ḥ. with its 220-strong garrison under Captain Castellazzi. Upon the suppression of the revolt many locals returned to the Orthodox faith.

In the 1970s, the residents of Ḥ. took an active part in the Eritrean struggle for independence, supporting the ↗Eritrean Liberation Front, which was operating in neighbouring Sāho areas along the escarpment.

Haletat

The term H. (**ሃሌታት**, sg. **ሃሌታ**, *hal(l)eta*) derives from **ሃሌ፡ ሉያ**, *halle*(*luya*) 'hallelujah' (cp. DTWDic 404), the old Jewish and Christian exclamation of joyful devotion and praise to God that is written at the beginning (and sometimes at end) of several psalms from the ↗Psalter. It plays an important role in Ethiopian liturgy (↗*Qəddase*), all the more so as ↗hymns are concerned. In fact, no hymn is sung without inserting the "hallelujah" (i.e., H.). According to an Amharic saying, **መዝሙር፡ በሃሌ፡ ነገር፡ በምሳሌ**, *Mäzmur bähalle, nägär bäməssale*, 'Like every psalm [but here also "hymn"] opens with a halleluja, so a speech must begin with a proverb' (BaetDic 4; KWK 373).

The H. may consist of a sequence of one to ten hallelujahs sung in one of the three modes of the ↗*zema* ('sacred chant'): i.e. ↗*gəᶜəz*, ↗*ᶜəzəl* and ↗*araray*. The following parts of the ↗*Dəggʷa* are opened by a H.: ↗*aryam*, ↗*arbaᶜət*, **መዝሙር** (*mäzmur*), **አቡን** (*abun*), **ሠለስት** (*śäläst*), ↗*sälam*, as well as, though not always, *ᶜəzəl* and ↗*wazema* (for a description of them s. HabUff). A few other elements, like **መኃትው** (*mäḫatəw*), *sälam*, *ᶜəzəl* or **ሀየንተ፡ ዕዝል** (*həyyäntä ᶜəzəl*), may have the H. in their midst. In this case, the H. are called *Haletat zämaʾəkäl* ('H. of the middle').

In both (*Ṣomä*) *Dəggʷa* manuscripts (none of them antedating the 18th cent.) and printed Church service books, H. are featured in a table usually at the end or between the parts of the text, whence its name: **እንቀጸ፡ ሃሌታ** (*Anqäṣä haleta*, 'Gate of the H.', cp., e.g., Henok Wäldä Mikaʾel 1996 A.M.). The H. may have their own musical notation (↗*Mələkkət*) – Gəᶜəz letters or signs (**ሥረዩ**, *śəräyu*) indicating a whole group of notes and reminding the cantors of the tune of the (next) hymn to be sung (Powne 1968:88f.; HabUff 377, 383).

Habtemichael Kidane

Halévy, Joseph

H. (b. 15 November 1827, Adrianople, Turkey [? b. in Hungary according to recent research], d. 21 January 1917, Paris) was a leading 19th-cent. Semiticist. H. spent most of his adult life in France, where he lead a distinguished career as an Orientalist and archaeologist, publishing numerous studies on Semitic languages and epigraphy as well on the Bible. In 1868, he volunteered to the Alliance Israélite Universelle to go to Ethiopia to investigate the situation of the ↗Betä Ǝsraʾel, becoming the first practising Jew to visit them. His reports on their circumstances are among the most important early descriptions of their society and also contain interesting information about Ethiopia during the last years of *aṣe* ↗Tewodros II. H. believed the Betä Ǝsraʾel were Jews and called for programs to assist them in resisting the incursions of Christian missionaries (↗London Society for Promoting Christianity). His position was, however, not accepted and only with the arrival of his student Jacques ↗Faitlovitch were such programs initiated in Ethiopia.

Later, in 1869–70, H. also travelled to the Arabian peninsula (Yemen) in search of Sabaean and Ḥimyaritic inscriptions (↗Epigraphic South Arabian) for the Académie des Inscriptions et Belles Lettres of Paris. There he was the first European to venture as far as the ↗Nağrān region; and discovered the ancient Minean kingdom and its inscriptions. On his return, H. published 683 epigraphic documents, some also in Minean.

In 1879 H. began teaching Gəᶜəz at the École Pratique des Hautes Etudes in Paris and became the librarian of the Societé Asiatique. In 1893 he founded the *Revue sémitique d'epigraphie et d'histoire ancienne*, in which he published much of his work (1893–1914). He also published five volumes of *Recherches bibliques* (Paris 1895–1914), studies of the Hebrew fragments of Ben Sira (*Le nouveau fragment hébreu de l'Ecclèstiastique*, 1902), and on the origins of Christianity (*Études évangéliques*, 1902).

Steven Kaplan

Ḥalḥal

Ḥ. (ሐልሐል) has been since early times the name designating the mountainous Eritrean region north-west of Kärän and its population. This region dominates the middle valley of the ↗ᶜAnsäba and is limited by the left bank of this river. The extended archaeological area of ↗Aratu proves that the Aksumite civilization reached this part of the Eritrean highlands too.

According to the current interpretation of oral traditions, since the 10th cent., ↗Bilin speakers coming from ↗Lasta settled in a large part of the northern highlands around Kärän, giving birth to the ruling clan of the Bet (Gäbre) Tärqe or Bogos. In the 14th cent. a new ethnic and linguistic change brought a second group of Bilin speakers to the region of Ḥ., the Bet Ṭaqʷe, coming from ↗Ḥamasen. Owing to the overlapping of clanic and geographical terms, the Bet Ṭaqʷe were called also Ḥ.

Nowadays the Ḥ. people are all bilingual and speak Bilin and Təgre, which is also the language of their poetry and songs. The four main Ḥ. groups are called ᶜAd Samara Čon, ᶜAd Čafa, ᶜAd Gabša and ᶜAd Fäza. The two major centres are Waliqo and May Awalid. The material culture and social organization of the Ḥ. are the same as those of the rest of the Bilin. Since the mid-19th cent. the Ḥ. have abandoned Christianity for ↗Islam, unlike the Bogos, who largely accepted the Catholic and the Protestant denominations.

Halibo

Azzaž H. (ሀሊቦ, full name [probably] ሀሊቦ፡ ወንጌል Halibä Wängel, 'Milk of the Gospel') was a trusted ↗*azzaž* at the court of *aṣe* ↗Śärṣä Dəngəl. As such he was appointed commander of a newly organized guard regiment *qʷərban* ('associates') in 1574 and served loyally his sovereign both as war-lord and diplomat.

In 1575, H. was sent as head of a delegation of high ecclesiastics to *bahər nägaš* ↗Yəsḥaq to pledge loyalty to the Emperor. He tried, in vain, to persuade Yəsḥaq to submit, and then informed the Emperor through his son about separatist plans of the *bahər nägaš*. Shortly after, he was central in securing the final victory of *aṣe* Śärṣä Dəngəl over Yəsḥaq in December 1578.

H. is also known to have taken part with his regiment in a successful campaign of the Emperor against the Betä Ǝsraʾel prince ↗Kalef in October 1579.

Sevir Chernetsov

Ḫalīfa

In Islamic political history, Ḫ. (خليفة, Engl. caliph) was the Arabic title given to the four immediate successors (known as *al-ḫulafāʾ ar-rāšidūn*; r. 632–61) of the Prophet ↗Muḥammad. The first Ḫ., Abū Bakr aṣ-Ṣiddīq (r. 632–34) was referred to as *ḫalīfa rasūl Allāh* ('deputy of the Apostle of God'). The rulers of the two Umayyad dynasties in Damascus (r. 661–750) and Spain (r. 756–1031), as well as the Fāṭimids (r. 909–1171) and the ᶜAbbāsids (r. 750–1258), claimed the title until the destruction of Baghdad by the Mongols under Hulagu in 1258.

The title of Ḫ. was assumed by Ottoman *sulṭāns* such as Selim I (r. 1512–20) and the 34th *sulṭān*, Abdülhamid II (r. 1876–1909). The latter "... adopted his own 'modern' concept of the caliphate according to which the caliph – rather like the pope for the Catholics – had a spiritual power over Muslims throughout the world" (Georgeon 2000:616).

On the outbreak of ↗World War I in 1914, the Ottoman *sulṭān* Muhammad V proclaimed himself as Ḫ. in order to mobilize the support of the Muslims for his call for a ↗*ǧihād* against the Allied Powers. In 1924 Kemal Atatürk abolished in Turkey the office of the Ḫ. After 1924 the title was not claimed by any ruler in the Muslim world (with the notable exception of those of the Sokoto state in northern Nigeria), although there have been attempts to revive the caliphate.

In mystical Islamic traditions, including those of Ethiopia, the title of Ḫ. was granted to the successor or delegate of a Ṣūfī saint who was either a direct descendant of the saint or the most prominent among his disciples who had served him loyally and obediently in his lifetime, implying that faithfulness and trustworthiness were sometimes more crucial than genealogical affinity to qualify for succession. For example, in Wällo, *al-ḥāǧǧ* ↗Bušrā Ay Muḥammad (d. 1863) of Gatā was succeeded by his son (*al-ḥāǧǧ* Walē), while, upon the death of *šayḫ* Aḥmad b. Ādam (1903) of Dānā, a follower of the *Qādirīya*, it was one of his disciples, Muḥammad Yāsīn (d. 1924), who succeeded him as Ḫ. (TrIslam 241). It is customary for the saint to designate such a successor before his death and his *murīd*s ('novices') and the community are expected to accept the position of, and swear allegiance to, such a person. However, there were times when disputes arose among the sons of the dead saint over the succession, possession of property, including land, left by him, and the sharing of the income and material gifts collected from pilgrims and other pious visitors to the shrine of the holy man. It is believed that the Ḫ. inherits and transmits some of the *baraka* ('grace') of the deceased saint and is therefore revered for his piety. However, he does not claim the same status of sainthood (*wilāya*) as that of his predecessor, nor does the community recognize such a claim. He is perceived only as the custodian of the shrine, and the votive gifts offered to him are presented in honour and memory of the saint, not in those of his Ḫ.

The principle of succession applies especially to the major mystical orders in Islam, such as the *Qādirīya*. Among the adherents of the *Ṭīǧānīya*, the Ḫ. is "the inheritor of the spiritual power (*baraka*) of the founder of the order, to whom alone the title Shaikh is applied" (Arnold 1987: 881).

In the ↗Mahdist tradition, the Ḫ. is the successor of the *mahdī*. Thus, in the Sudan, ᶜAbdallāhi inherited, not the mystical powers or mahdiship, but only the political leadership of the Mahdist state after the death of its founder, Muḥammad Aḥmad b. ᶜAbdallāh al-Mahdī in 1885. Under ᶜAbdallāhi, who claimed the title of *ḫalīfat al-mahdī* by virtue of his superior position in the Mahdist hierarchy, there were three junior Ḫ. whose status was analogous to the first, second and fourth historical Ḫ. who succeeded the Prophet Muḥammad.

Ḫ. is also used as a proper name for a male member of a Muslim family.

Hussein Ahmed

Hall, David

H. (b. 7 May 1877 Jaffa, d. 4 March 1971 Addis Abäba) was a businessman. The son of Moritz ↗Hall and of ↗Wälättä Iyäsus, he settled in Ethiopia after World War I and in 1922 founded the import-export firm Hall & Co., which represented several foreign firms in Ethiopia. In addition to his activities in the cattle trade, Hall obtained a brewery concession and founded the Saint George Brewery, today still in existence as the Addis Brewery. Hall also served as director of government purchasing and adviser to the Foreign Ministry and later as a Counsellor of State during the reigns of ↗Mənilək II and ↗Ḫaylä Śəllase I. In 1930, at the time of the celebrations of Ḫaylä Śəllase's coronation, H. was official press officer and government liaison representative to foreign correspondents and dignitaries. His diplomatic activities included a secret mission to ↗Germany in 1935 to buy arms for use against the Italian army. During the Italian occupation, H. lived in Palestine and, as a diplomat in the service of the exiled Emperor, travelled to England and Europe to further the Ethiopian cause.

Soon after the liberation, H. returned to Ethiopia and, after World War II, he went to Europe as a representative of the Ethiopian government to interest displaced persons in settling in Ethiopia. In his role as an administrator of enemy (Italian) property, he had a pasta factory brought to Ethiopia, in an effort to provide much needed food, and was also the founder of the Ethiopian Cooperatives and Mutual Assistance Fund, which proved successful in its endeavors to provide employment and assistance. The activities of these cooperatives included a medical insurance fund with its own hospital and an experimental farm and agricultural school on H.'s own property, administered by Seventh Day Adventist missionaries, for the education and training of street children from Addis Abäba. As holder of government concessions for road construction, he supervized this work in southern Ethiopia. As late as the 1950s, H. continued to serve as a government adviser and accompanied the Emperor on State visits.

H. paid for the construction of the central synagogue in Addis Abäba. Highly esteemed for his knowledge of Ethiopia and its affairs, in his old age his advice was sought by all foreign visitors.

Hall, Moritz

H. (b. 14 March 1838 Cracow, Russia [now Poland], d. 27 January 1914, Jaffa, Palestine) was an adventurer, businessman and founder of an enterprising family. Born to Jewish parents,

The Hall family at the wedding of Daniel Hall, residence of Baron von Ustinov, German Colony, Jaffa, photo 1902, courtesy of Otto Bertsch. From left to right, upper row: Joseph, Friedrich Salomon, Jakob Gottlieb, David, Christina, Augusta and Vera Hall; middle row: Mrs. Klimscher, Daniel Hall, Natalie Klimscher née Michalski, Moritz Hall, Wälättä Iyäsus, Magdalena von Ustinov née Hall, holding Tabitha von Ustinov, her husband Platon Baron von Ustinov; bottom row: Olga Hall, Katia Hall (later Bertsch), Immanuel Hall, Jonah ("Klop") von Ustinov, Peter ("Petja") von Ustinov.

Johan Jakob Salomon Hall and Sofia Rebeka Babette Hall née Kunze, he went to Ethiopia in the 1850s, during the reign of the *aṣe* ↗Tewodros II, probably as a merchant and adventurer, after having served in the Russian army.

H. lived and worked with the artisan missionaries from ↗St. Chrischona-Pilgermission at their colony at ↗Gafat, and converted to Christianity at this time. There, H. married ↗Wälättä Iyäsus, also called Katherine Zander (1850–1932), the daughter of Christoph Eduard ↗Zander by his first Ethiopian wife. Their two oldest children, Jakob Gottlieb (1866–1919) and Magdalena (1868–1945), were born in Ethiopia.

As an experienced caster of brass, H. was considered the head of the arms foundry at Gafat, where he and his colleagues, at the orders of Tewodros, successfully cast several pieces of ordnance, most notably the cannon named "Sebastopol". The foundry is regarded as an early instance of modern industry in Ethiopia. Later, H., his family, and the other foreign artisans and missionaries were taken captive by Tewodros and eventually moved to the fortress of ↗Mäqdäla. Freed by the British forces led by Lord ↗Napier on 13 April 1868, they left Ethiopia with the latter's army.

The H. family settled in Jaffa, where the rest of their 13 children were born. H. became a lumber merchant and lived with his family in the mission house of the ↗London Society for Promoting Christianity Amongst the Jews. He was employed as the manager of the Society's Artouf colony, in the Judean hills, near Jerusalem, from 1883 to 1885. He then returned to Jaffa and lived in the German Colony, a European enclave on the outskirts of Jaffa, where he and his family came under the protection of the German Consulate, which he served as an Honorary Dragoman and interpreter. H. died in Jaffa and was buried in the German Colony's cemetery there. In 1952 his remains were transferred to the cemetery of the Jerusalem German Colony.

Accompanied by her son Jakob, Wälättä Iyäsus returned to Ethiopia without her husband, around 1902. She became a Lady-in-Waiting, in charge of the Royal Pages at the court of Mənilək, and a close confidante of *ətəge* ↗Ṭaytu.

Jakob Gottlieb Hall lived in Jaffa and in Haifa. He went to the United States with his brother Daniel and Daniel's wife, but returned to Ethiopia with his mother around 1902. There he was importer of machinery in Addis Abäba and, at the Royal Palace, operated a machine shop and directed a school for the children of the aristocracy. He obtained concessions for the exploration of minerals and for mining, and served as a diplomatic and commercial emissary under Mənilək.

In 1888 Magdalena Hall married the Russian Baron Platon von Ustinov (1840–1917), a Protestant convert, who also resided in Jaffa. Ustinov helped the Hall brothers open the Hôtel du Parc in Jaffa. Wälättä Iyäsus persuaded her son-in-law, Ustinov, to purchase property in Jerusalem near the Ethiopian Church. After his death, Magdalena sold this property to Empress ↗Zäwditu. Ustinov and Magdalena had four sons and a daughter. The oldest son, Jonah, was the father of the British actor and director Sir Peter Ustinov (1921–2004).

Other children of H. who were active in Ethiopia: David ↗Hall; Friedrich Salomon Hall (in Ethiopia Sälomon; 1879–1964), who went to Ethiopia in 1906 and founded and managed the Imperial Hotel, the first modern hotel in Addis Abäba. During World War I, he was a member of a secret German mission to Ethiopia, led by Leo ↗Frobenius and later lived with his English wife in Dərre Dawa, where he was a coffee merchant; Christina Hall, who became a teacher in Ethiopia and was a governess in the Imperial Palace. She lived in Cyprus during the Italian occupation of Ethiopia; Vera Hall (1886–1983) married the German physician and missionary, Dr. Alfred Schumacher, and served with him for many years in Lebanon. Later she was a governess at the court of ↗ᶜAśratä Kaśa Ḫaylu, before her death in Stuttgart.

Ham

H. (**ሃም**, also **አሃም**, Aham, not: Ḥam) is a village community located in the historical district of Anbäsät Gäläba, Šəmäzana, in the southern part of the province of ↗Akkälä Guzay (Eritrea), close to the border with ᶜAgamä, Təgray (s. map for Ḥalḥal). Along with the nearby monastery of ↗Däbrä Libanos in Šəmäzana, the hamlet of H. is one of the earliest Christianized sites, if not one of the oldest settlements, in the region. The entire H. area contains a number of ↗Aksumite-culture-period and early Christian archaeological and historical sites.

The old church of Ǝnda Maryam (cf. Bausi – Lusini 1992:27–30, figs. 9–13) reveals ancient architectural elements and artefacts possibly dating to the Aksumite culture period, including monolithic pillars, a large stone-basin, amphorae and ceramic vessels (cf. Anfray 1965: 7f., pls. IV C–D and V–VII). The Gə^{c}əz funerary inscription (RIÉ no. 232; cf. Fiaccadori 1990; Kropp 1999) originally embedded in the façade of the old church, has been transferred into the internal wall of the new church of Ǝnda Maryam of H., which was built in 1980 close to the old church, within the same compound. A third building, in the style of the old church – also characterized by monolithic pillars (cf. Bausi – Lusini 1992: figs. 7f.), is likely to have originally marked the main entrance to the church.

Two monolithic pillars similar to those found in the church of Ǝnda Maryam are located on a small hill within 200 m off the church grounds. They may indicate the location of another Aksumite-period building structure. Besides, ancient rock engravings with crosses and human and animal figures, multiple stone tumuli, and a possible fruit or oil press with three tanks and conduits carved into rock have also been found near H. During the 1980s at least 60 wrapped and desiccated ("mummified") ancient human bodies, some with sandals, crosses, and various tools, were found in burials nearby.

Local tradition attributes both the building of the sanctuary at Däbrä Libanos and that of the church of H. to the missionary activity of *abba* ↗Libanos (Mäṭa^{c}) during the late 5th or early 6th cent. A.D.

A memorial writing on the metal binding of the Golden Gospel (↗*Wängelä wärq*) presently hosted at Däbrä Libanos states that this book was written at the order of "King Sälomən" [*sic*] (probably Sälomon, royal name of ↗Yagbə^{ɔ}a Ṣəyon, the son of Yəkunno Amlak), for the church of *abba* Məṭä^{c} [*sic*] (cf. CRDLib 7; Schneider in PICES 8) of Aham. The land charters of the same Golden Gospels frequently mention H. (CRDLib 185, 189, 197f., 202, 204, 207ff., 212f., 215, nos. 4, 7/I, 14, 15, 19, 20, 22, 27, 28, 30), its "treasurer" (↗*Gäbäz*, ibid. 198, no. 15), and its "governor" (*mäk^{w}ännən*, ibid. 213, no. 27). One of the *Gädlä Libanos* recensions (cf. Conti Rossini 1903; Bausi 2003, §§ 148f., 156) has an episode that takes place in H.

Ḥamad-La^{c}de

Ḥ.L. b. *šayḫ* Ḥasan b. Ḥamad-La^{c}de (b. 1940, As-Eyla, d. 1981, Djibouti) was an ↗^{c}Afar poet, renowned in Djibouti as song-writer, playwright and traditionalist. A member of the Debne

Ḥamad-La^{c}de; ca. 1965; photo courtesy of the author

Ḥarkam-mēla Arbaahinto, the family of the *sulṭāns* of ↗Gobaᶜad, Ḥ.L.'s genealogy includes prominent figures: his great-great-grandfather was Loᶜoyta b. Arbāhim (↗Loᶜoyta) and his great-grandfather, Aḥmad (Ḥúmmad) Loᶜoyta; Ḥ.L.'s grandfather, second son of Hummad b. Loᶜoyta, acted as a representative of the Debne at Mənilək II's Court and became *sulṭān* in 1902; he died untimely in Obock on 31 July 1903. Since his son Ḥasan was only two years old, the power and title of *sulṭān* were devolved to his uncles and their descentants. Ḥ.L.'s father, known as *šek* Ḥasan, devoted his life to religious studies and collected data on astronomy, genealogies and ᶜAfar History, which he wrote down in eight exercise-books entitled *Nawādir* 'rare (extraordinary) things'.

Thanks to his familial and intellectual heritage and personal gifts, Ḥ.L., from the turn of the 60's until his death, was one of the most revered personalities of ᶜAfar cultural life in Djibouti. His popularity as a traditionalist grew rapidly through his broadcast programs (*Sabtik Sabti, Sabti waane*) for Radio-Télévision de Djibouti. Unfortunately, many of these recordings have disappeared. It is through books (in Morin 1980, 1991, 1995) that his deep knowledge of ᶜAfar literature appeared in its different aspects. We owe to him a collection of narrative, historical and poetic texts, which makes Ḥ.L. the second major source on ᶜAfar after Reinisch's informant *nugus* Bilal b. ᶜAsa *nugus* Giᶜdár (in Morin 1999).

Ḥamälmal

Ḥ. (**ሐመልማል**, lit. 'the flourishing one', b. ca. 1510–25, d. November 1564, Goǧǧam) was a great Šäwan lord of royal descent in the mid-16th cent. Solomonic kingdom. The identity of Ḥ.'s father is not known; his mother was *wäyzäro* ↗Romanä Wärq, daughter of *aṣe* ↗Naᶜod and (half-?)sister of *aṣe* ↗Ləbnä Dəngəl. Ḥ. was thus a first cousin of *aṣe* ↗Gälawdewos and ↗Minas, both of them sons of Ləbnä Dəngəl, and a second-degree uncle of *aṣe* ↗Śärṣä Dəngəl, Minas's eldest son. Thus belonging to the wider imperial family, Ḥ. could lay claim to a position of considerable authority within the Solomonic kingdom, a position which, indeed, he gained and held on to by virtue of his energetic personality and military prowess. At the same time, he could not himself succede to the throne through inheritance because he did not belong to the lineage of Ləbnä Dəngəl. This peculiar position was a key factor in shaping Ḥ.'s career and determining his actions.

Our earliest data on Ḥ. go back to the late 1550s. ↗Baḥrəy mentions him as fighting the advancing ↗Oromo at Dago (likely in eastern Šäwa, in the Däbrä Bərhan area; cp. HuntGeogr 103) during the rule of the *Mičelle* ↗*gadaa* (1554–62); the clash probably took place while Gälawdewos still was reigning. We next hear about Ḥ. in March 1559 when, immediately after Gälawdewos's violent death, he led a campaign against ↗Harär in the course of which its *sulṭān* Habīb was killed. For the same year of 1559 the Chronicle of Minas then includes Ḥ.'s name in a short enumeration of "great lords of the kingdom" (**ዐበይተ፡ መንግሥት**, *ᶜabbäytä mängəśt*) for 1559 (Kropp 1988:53 [text]). At that time Ḥ. bore the title of ↗*däǧǧazmač* and the area under his control is described as "[Šäwa] from the Blue Nile as far as he is able to project his power" (cf. *ibid.* 54 [text]). It must be remembered that at this time, as a result of the devastating *ǧihād* of ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ) and the Oromo advances, large parts of Šäwa, especially in the east and south, again were frontier regions for the Christian kingdom. In 1562–63 Ḥ. took part in Minas's campaign against the rebellious *baḥər nägaš* ↗Yəsḥaq, who then for a second time had challenged Minas's authority by crowning a rival puppet emperor under his tutelage (this time Marqos, the infant son of Minas's deceased brother Yaᶜəqob).

Until this period, Ḥ. appears as a loyal supporter of the ruling Solomonic monarchs. This changed, however, with Minas's unexpected death in early 1563 in the course of preparation for a new campaign against Yəsḥaq. Ḥ. and other lords were not present in the royal ↗*kätäma* in Amhara when Minas died, because they had already left for an advance mission. For this reason they did not play a role in the election of Śärṣä Dəngəl, Minas's 13-year-old eldest son, as his fathers successor. His exclusion from the election process, as well as the new monarch's young age, prompted Ḥ. to make a bid for the effective control of the Empire. Śärṣä Dəngəl did not continue the northern campaign against Yəsḥaq, but went to Goǧǧam, where he sought refuge at the residence of his grandmother, *ətege* ↗Säblä Wängel, at Mängəśtä Sämäyat. Ḥ. arrived there a little later. While he shied away from openly challenging Śärṣä Dəngəl's claim to the throne, he confined him to virtual house arrest. At the same time, a large number of regional commanders and ↗*čäwa* garrisons pledged allegiance to Ḥ., thus effectively making him the head of the kingdom outside Yəsḥaq's sphere of influence.

An intervention by Yəsḥaq, however, soon triggered a series of events that reversed the balance of power and rendered the period of Ḥ.'s dominance short-lived. Yəsḥaq had the audacity to dispatch to Mängəśtä Sämäyat an envoy charged with abducting the youthful monarch and bringing him under his control. Embarking on a hazardous flight from Yəsḥaq's agent through Goǧǧam and Šäwa, Śärṣä Dəngəl there found support from some unexpected quarters, among them ↗Täklä Haymanot (Täklo), powerful governor of ↗Damot. Until shortly before Täklo had been a key ally of Ḥ., but the latter's overbearing behaviour once fully in power had moved him to change sides. With Śärṣä Dəngəl having slipped from his control, Ḥ. too now had a rival puppet emperor crowned (a certain Täklä Maryam, an elderly descendant of the 14th-cent. *aṣe* ↗Säyfä Ar^{c}ad). At the same time, Ḥ. sought a military confrontation with Täklo and the other supporters of Śärṣä Dəngəl before they could further strengthen their position. In December 1563 thus began a protracted but inconclusive stand-off between the two armies in their fortified positions in Damot. Ḥ., however, was fighting on Täklo's territory, and in February 1564 he ran into provisioning problems which compelled him to surrender. As a close relative of the monarch, Ḥ. was pardoned for his insurrection, but relegated to Goǧǧam and endowed with a (presumably modest) governorate. He died there in November 1564. The sources do not give any indication as to the cause of his death.

Two other important personalities in Ethiopian history, both associated with the reign of *aṣe* ↗Susənyos, also bear the name of Ḥ.: (1) *ətege* Ḥ., *aṣe* Susənyos's mother; (2) *ras* Ḥ., governor of ↗Kämbata 1601–14.

Michael Kleiner

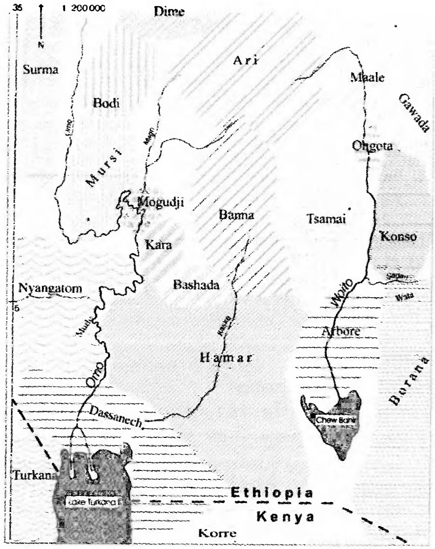
Hamär

Hamär dialect cluster

The people of the H., ↗Banna and ↗Bäšada speak one language (here referred to as H.) in variants with a few lexical differences. Self names are respectively: *hämär*, *bänä*, and *bäšädä äpo* (< *äpo* 'mouth'). The Kara also speak a dialect of the same language. H. is an Omotic language belonging to the ↗Aroid group with ↗Aari and ↗Dime. Its speakers (around 30,000) live in South Omo between the ↗Omo and Woito valleys, and practise a mixture of pastoralism, agriculture, apiculture and hunting.

H. uses ten basic vowels falling into two corresponding categories. Category I vowels are open, unraised, and pronounced with constricted pharynx, category II vowels are close (except for *a*), raised and pronounced with open pharynx.

H. is a generic language in which particular forms of nouns, verbs, and quality words are derived from a general, non-specific form. It is also a suffix language, modifiers taking the form of suffixes, and Subject–Object–Verb order is typical for simple declarative sentences. The following suffixes are attached to general forms of nouns to produce particular forms: *-a*/*-ta* for masc. sing. or particular/small, *-no*/*-tono* for fem. sing. or global/large, *-na* for particular pl., *-o* for address sing., *-nato* for address pl., *-mai* for address intimate, *-mo* for indicating state, condition, quality of. The general form of pronouns can be modified by suffixes to form independent and dependent pronouns. The generic root of the verb is active, suffixes are used alone or in combination to produce derived roots: *-äd* for passive/reflexive, *-s*/*-t* for causative/initiative, *-ïm* for progressive. Verb stems indicating aspect are derived from verb roots as follows: root alone for immediate



Hamär and their neighbours, map courtesy of Ivo Strecker

aspect, *-a* for perfect, *-i* for descriptive, *-e* for imperfect, *-o* for purposive. Relatives can be derived from verb stems by adding noun suffixes. Verbal expressions combine verbal stems and roots with, or without, pronouns. Verbal negation in 3rd pers. involves raised and falling tone on the last two vowels, e.g., *känsâi* 'does not hear'. A small number of quality words may perform as adjectives, adverbs, nouns or verbs.

Ideophones form a large class of words which, unlike the other word classes, do not take on suffixes, but can be varied through reduplication and lengthening. Ideophones sum up states of affairs, mimic sounds, act as vocatives or are used as attitude markers.

The ten-word list for H. is:

'one'	*käla*	'sun'	*ai*
'two'	*läma*	'moon'	*arpi/arfi*
'three'	*mäkän*	'blood'	*zombi/mäkäs*
'fire'	*nu*	'tongue'	*ätäb*
'water'	*noqo*	'tooth'	*äsi*

Lit.: JEAN LYDALL, "Hamer", in: *BendNonSLang* 393–438; ID., "Gender, Number, and Size in Hamar", in: MARIANNE BECHHAUS-GERST – FRITZ SERZISKO (eds.) *Cushitic – Omotic: Papers from the International Symposium on Cushitic and Omotic Languages, Cologne, January 6–7, 1986*, Hamburg 1988, 77–90.

Jean Lydall

Hamär ethnography

The H. are the southernmost group of Omotic-speaking peoples in southern Ethiopia, estimated to number about 15,000–20,000. Oral tradition recalls that the first ancestor of the H. came from ↗Aari. The *bitta* ('ritual leader', lit. 'first') settled in the mountains that rise up high (2,800 m A.S.L.) between the valleys of the Wäyṭo (Woito) and the lower Omo, north of Č̣äw Baḥər and Lake Turkana (formerly Lake Stefanie and Lake Rudolf). Here he made fire and, seeing the fire, people came from Aari, ↗Maale, ↗Ṣamay, ↗Konso, ↗Kara and even from ↗Ñaŋatom.

The composite character of the society is remembered and ritually re-enacted each year in every settlement, partly to strengthen clan identities and partly to ascertain and maintain economic ties with partners to whom one can turn in situations of drought.

In the course of time, two *bitta* emerged, each with his territory and people (*kaissi*, 'subjects', lit. 'lost ones'). Both *bitta* jointly safeguard the good fortune (*barğo*) of all of H. and divide their task in that the line of *bitta* Elto offers protection against threats of disease and drought while the line of *bitta* Banki Marro wards off the menace of war.

The office of the *bitta* has weakened since *aṣe* Mənilək II's armies conquered H. at the end of the 19th cent., just as many other traditional institutions have lost their importance or have altogether disappeared, e.g., the public meeting grounds (*boaka*) and ritual gateways (*kaissin kiri*) that gave identity to the different territorial segments (*sinti*), and the age-sets (*anamo*) that used to play a constitutive role in H. social and political life.

In the wake of the Ethiopian conquest, many H. sought refuge among the ↗Arbore, ↗Đáasanač, Kara and Ñaŋatom, who live in inaccessible and unhealthy habitats that the Ethiopian armies did not dare to occupy for any length of time. However, soon the H. began to return from exile and established themselves in a no-man's-land that extended between the lowlands of their hosts and their former homeland in the mountains. Here they lived a semi-nomadic life, relying more on pastoralism than on agriculture. Also, in order to replenish their herds, they began to raid the ↗Boorana and the Gabare and in Kenya. Since then, raiding of livestock has remained one of the highest goals and expressions of personal achievement in H.

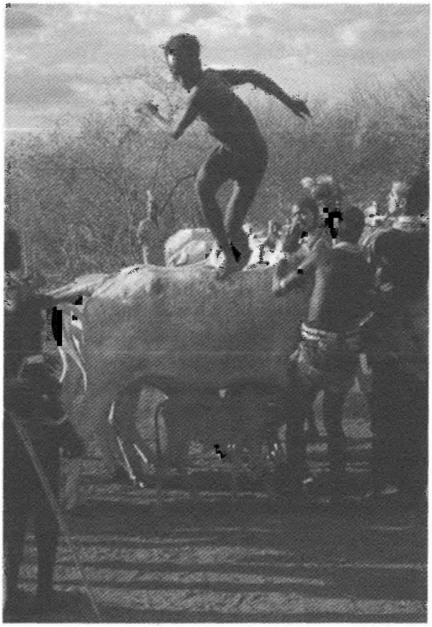
Today, at the beginning of the 21st cent., two all-weather roads have reached the area, one from north to south and one from east to west. Two towns have also been growing, Turmi, where the police are stationed, and Dimaka, where the local administration, schools, a mission station and a clinic are located. Both towns have weekly markets that are regularly visited by an ever increasing number of tourists. Thus, much has changed during the past hundred years.

Yet, H. culture has also retained some of its old features. For example, H. is one of the few places on earth where women still dress in leather. The skins (*aizi*) of goats, sheep and antelope – often decorated with beads and pieces of metal – provide smooth and well-fitting aprons (*toko*), skirts (*palante, korba*) and capes (*kaši, kadi*) that are cheap, durable and elegant to wear. In addition, women wear two heavy iron rings (*issante*) around the neck, and heavy iron rings (*zau*) around their arms and legs. Girls may use a number of different hairstyles, but married women invariably wear long ringlets (*laisso*) cut straight above the eyebrows and covered with butter mixed with red clay and resin. At special (ritual) occasions, married women wear a broad kauri-studded belt (*kalši*) around their waist and insert an ostrich feather in the ringlet (*tiri*) that they put on their head.

Before the conquest, H. men also used to wear *laisso*, but during their exile they adopted the hairstyle of the Đáasanač and Ñaŋatom, that is the *šunšul*, a clay cap adorned with ostrich feathers.

The H. engage in a mixed economy of pastoralism (goats, sheep and cattle), slash-and-burn cultivation (sorghum, maize, various kinds of beans, squash, lettuce etc.), gathering (wild fruits, leaves and roots of trees, various kinds of greens during the rainy season), and apiculture. Traditionally, hunting was also an integral part of the economy, but the introduction of modern arms has decimated the supply of game and by now the Ethiopian government has prohibited hunting. Although the plough is slowly being adopted in the north, in the south the H. still use a sharpened (*wossa*) stick for planting and a small iron blade (*gaita*) for weeding. A small axe (*teṣebe*), an adze (*wollie*) and a knife (*alpha*) complete the tools used in the fields.

One of the most prominent features of H. architecture is the gateway (*kiri*). No man may erect the gateway of his homestead by himself. This is the task of his neighbours, the *zarsi*, who in this way show that they welcome him in their midst. Once the gateway has been built, the fences are added: a high, tightly constructed palisade fence (*kirmi*) for the goat enclosure and a lower and more loosely made fence (*agala*) for the cattle kraal. In olden days, the small circular grass thatched houses (*ono*) had their place inside the goat enclosure, where they were safe from hyenas, jackals and leopards, but nowadays people build their houses also outside the fenced-in parts of the compound.



Hamär, initiation ritual (leap across the cattle); photo courtesy of the author

A spectacular feature of H. culture that also seems to be enduring is the initiation rite, where an initiate (*ukuli*) leaps across a row of cattle. The ritual produces good fortune (*bargo*) for the young man and ensures that his wife will have an abundance of children. Also, it publicly proclaims that the immature young man has been reborn and from now on will act like a responsible elder (*donza*).

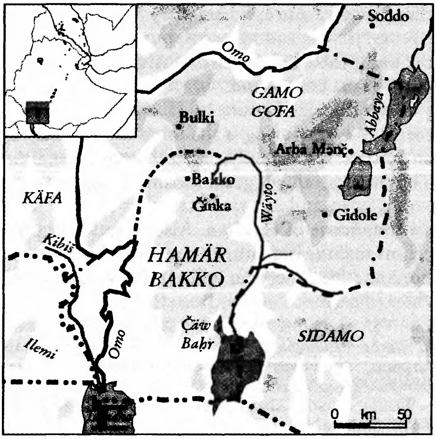
Hamär Bakko

H.B. (**ሃመር ፡ ባኮ**, also Hamär Kokke) is the name of a former *awrağğa* in the southern part of the old ↗Gamu Gofa province. In the late 1960s the area west of the Omo River (previously a part of Käfa province) was added to the *awrağğa*, which was named Gäläb and Hamär Bakko then. H.B. consisted of five *wärädas*: Hamär, Bänakolä (Banna Kole), Mursi Bodi and Gäläb.

The administrative composition of the *awrağğa* changed at various times. For some time, e.g., the Bakko sub-district was affiliated to Bulki, the administrative centre of Gofa, and then again to Hamär. Also, the ↗Konso district temporarily formed part of Hamär until it was given back to ↗Gardula in 1934. Under Italian occupation H.B., or "Baco", was administrated by the *residenti* of Bakko and Koke (VSAe I, 25f.).

In recent times the H.B. *awrağğa* was succeeded by the South Omo Zone, which belongs to the Southern Nations, Nationalities and Peoples' Regional State. The Zone is constituted by the *wärädas* of Hamär Banna, Bakko Gazär, Sälamago, Wäyṭo and Kuraz (Gäläb). The administrative centre of the district today is ↗Ğinka.

The eastern boundary of the *awrağğa* follows the River Wäyṭo (Woito) and Lake Çäw Baḥər. In the south the boundary is defined by the Ethio-Kenyan border at the northern shore of Lake ↗Turkana. In the west H.B. borders the disputed "Ilemi Triangle" (s. ↗Boundaries) west of the Kibbiš river and to the north-west and north to ↗Gofa *awrağğa*.



H.B. *awrağğa* includes the territories of various ethnic groups such as the ↗Aari, the ↗Arbore, the ↗Banna, the ↗Bäšada, the ↗Đáasanač, the ↗Hamär, the ↗Kara, the ↗Kʷegu, the ↗Maale, the ↗Mursi, the ↗Ñaŋatom and the ↗Ṣamay. Most of these ethnic groups are semi-nomadic agro-pastoralists. An important crop is sorghum. Cattle has high symbolic value and traditionally is object of a belligerent inter-ethnic competition.

The area north of Lake Turkana (previously called Lake Rudolf and, by Mənilək II, Samburu Baḥər; s. Nene Mburu 2003) was integrated into *aṣe* Mənilək II's territories by a military expedition led by *ras* ↗Wäldä Giyorgis Abboyye in 1897/98.

For the control of the new territory a couple of ↗*kätäma* were established. The highland camp of Bakko, called after a sub-group of the Aari, at the beginning of Ethiopian dominance became the most important *kätäma* in the area. It was founded by *ras* ↗Täsämma Nadäw as a military bridgehead and administrative centre of the so-called equatorial provinces. Another important *kätäma* was Koke. In 1899 Count ↗Leontiev was appointed governor of the "equatorial provinces". Three other Russian adventurers supported the establishment of Ethiopian control over the area, the Seljean brothers and Nikolai Chedeuvres. The last set up a military post by the name of "Mənilək" which was situated south-west of Lake Turkana in today's ↗Kenya. Sebillon, a Frenchman, founded a post called "Senegal" on the banks of the River Omo (PankHist II, 194f., 200, 358). Mənilək's claim of the "equatorial provinces", which for the most part was only nominal, was a disregard of British interests in the region. As Marcus (1975:188) suggests, Mənilək used the presence of Europeans in the region to deter them from military interference (for the historical context cp. also ↗Fashoda).

Ḥamärä Noḫ

Ḥ.N. (**ሐመረ፡ ኖኅ**, 'Noah's Ark') is a church in ↗Gondär established by *aṣe* ↗Tewoflos in the former "tower" (*maḫfäd*) of *bitwäddäd* ↗Basəlyos. On 24 *Ḫədar* [1 December] 1709, the Emperor gave it ↗*gʷəlt*-land in the region of Bäläsa, and had its ↗*tabot* dedicated to the "318 (Orthodox) Fathers [at the Council of ↗Nicaea]". Hence its other title of *Śälästu Məʾət*, 'The 300' (abridged from *300.wä.18*, '300 and 18'; "Selestù Mit" in the Italian colonial literature: e.g., Monti della Corte 1938:101). Mentioned in the chronicles (BassÉt I, 379; BégCron 92; DombrChr 92, 105) and in an Amharic historical text found in ms. EMML 1706, fol. 50ᵛ (Getatchew Haile in PICES 10, 370), it is located near the royal palace (↗*Gəmb*, cp. GuiVoc 760). Its name is especially bound to a celebrated collection of 146 18th-cent. historical documents preserved at the end of a Gospel manuscript from Ḥ.N., London, BritLib Or. 508, fols. *277b–87a* (fol. *278a* on the foundation of the church). They form an important local archive (Lusini 1998:15) that was almost completely published by Guidi (1906:653–98).

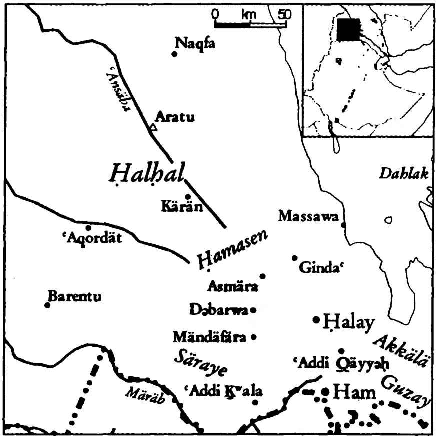
Gianfranco Fiaccadori

Ḥamasen

Ḥ. (**ሐማሴን**, with vars., seldom [in chronicles] also Amasen) is the name of a historical province in the northern Eritrean highlands, roughly corresponding to, however smaller, *zoba* Maʾəkäl (Tgn. 'Central province') of contemporary Eritrea.

The name, perhaps originally an ethnonym, is probably ancient. It has been suggested that it corresponds to ʾMSW ("Amasu"), a province of ↗Punt registered, along with WDLṮT (↗Adulis), in the Egyptian "Lists of Foreign People" of Pharaoh Thutmosis III, ca. 1458/25 B.C. (s. SerHist 25; Fiaccadori 2004:108). Later on, in Aksumite times, Ḥ. appears (as ḤMS^{2}M, i.e. ḤMŠ) in a pre-Christian 4th-cent. "pseudo-Sabaic" inscription of the beginning of ↗ʿEzana's reign: after subduing the coastal kingdom of ↗Gäbäz, the King went to Ḥ., here also receiving the homage of the Mətin(ə) (MṮNM, s. DAE IV, 19, no. 8.13 [RIE no. 186]). As Μετίνε (Metine) the latter are already mentioned in the ↗*Monumentum Adulitanum*, the anonymous Greek inscription of ca. 200 A.D. copied at Adulis by ↗Cosmas Indicopleustes (RIE no. 277.15, s. Fiaccadori 2004:138). Archaeological evidence shows that Ḥ. had been an area with an economically flourishing culture since around 800 B.C. at least, its settlement density being one of the highest of the entire Africa (↗ʿOna Culture). It soon became a part of the Empire of ↗Aksum, as proved, e.g., by the inscription King ↗Sembrouthes left in ↗Däqqämḥare, Dämbäzan, ca. 200 A.D. (*ibid.*, 131); and is also reflected in popular traditions making Ḥ. the first realm of the mythical ↗Abrəha and Aṣbəḥa (CRStor 258).



On its early way from the Eritrean coast to the Təgrayan highlands via Akkälä Guzay, ↗Christianity also spread, though to a lesser extent, into the neighbouring regions of Säraye and Ḥ., the latter having preserved until recently important evidence of Aksumite church architecture (e.g., ↗Ǝnda Maryam in Asmära). Yet, only in the 14th cent. did the creation of a chain of monastic communities of ↗Ewosṭateans, the movement inspired by ↗Ewosṭatewos of Däbrä Ṣärabi and for a long period of time pivoting on the monastery of ↗Däbrä Bizan in Ḥ., mark the beginning of a deeper Christianization (Lusini 2004:249ff.; LusStud).

Local folk-etymology explains Ḥ. as a corruption of *ḥamat Ḥusayn* (Tgn.: 'mother-in-law of Ḥusayn'), attributing the first settlements of Ḥ. to a Muslim woman. This legend reflects the historical fact that, after the fall of Aksum, or rather since the 10th cent., part of Ḥ. was controlled by factions of ↗Beǧa and other Muslim tribes, perhaps responsible for the first exploitation of the gold-mines in the region (CRStor 279). During the last decades of the ↗Zagʷe dynasty, probably connected with Ḥ. (ibid. 305), and the first period after the re-establishment of the ↗Solomonic dynasty, whose rulers extended their influence far to the north, ↗Agäw groups linked with the Zagʷe fled from ↗Lasta to Ḥ. (the Zagʷe are still the inhabitants of a remote district of Ḥ., the Liban, with toponyms of Agäw origin, e.g., Wägäriqo, its capital, s. CRStor 318). Also from Lasta, according to their own traditions, were to migrate the ancestors of the Bogos (↗Bilin), who dwelled in Ḥ. (ibid. 286f.). Likewise, the names of ancient settlements in Ḥ. (e.g., Dək̲anamo or ↗Dəbarwa) are often of ↗Cushitic origin. It is known from local chronicles and traditions that several subgroups of Cushitic stock came from Ḥ.: e.g., the ancestor of the Sāho ↗Irob in ʿAgamä and a Təgre-speaking faction of the Beǧa ↗Beni ʿAmər, called Ḥamaseyn (Paul 1954, index). In the progress of time, however, the Semitic speakers, traditionally much better rooted in Ḥ., prevailed again: the spoken language became Təgrəñña, the population consisting today of Təgrəñña-speakers alone. Their oldest genealogies often go back to the early Solomonic period, when the legendary ancestor of Ḥ. and the Təgrəñña groups of Akkälä Guzay, "*nəguś* Meroni", would have moved to Ḥ.

Important trade routes departing from the Red Sea (esp. from Massawa) and then following the course of the ↗ʿAnsäba river to the north connect Ḥ. with the lowlands of the Sudan: hence the economic importance of the region and its rulers, who acquired influential positions within the power framework of the Ethiopian empire. The local Təgrəñña groups of Ḥ. kept their own petty leaders, but were possibly tributary to the *maʾəkälä baḥər* (lit. 'the middle of the coast'), as the governor of the provinces between the Ethiopian highlands and the Red Sea area (*baḥər*) is called in a series of local 13th- to 15th-cent. documents from the "Golden Gospel" of ↗Däbrä Libanos of Ham (CRDLib 189–99, nos. 7-16, s. TadTChurch 74f.).

Since the 15th cent., these governors are known as ↗*baḥər nägaš* (Tgn. *baḥri nägaśi*'), under whose authority two ↗*kantiba* of Ḥ. were put by *aṣe* Zärʾa Yaʿəqob (PerZarY 47f.). The *baḥər nägaš* dominated the northern trade routes from and to the Red Sea, whereas most of Təgray was put under the ↗*təgre mäkʷännən*. The capital of the "kingdom" of the *baḥər nägaš* was Dəbarwa (today in Säraye, but originally part of Ḥ.), next to the ↗Märäb sources; he also occasionally moved to the chief places of other districts, such as the nearby ↗ʿAddi Baro (sometimes erroneously thought to be the first seat of the *baḥər nägaš*). In the early 16th cent. the Portuguese envoy ↗Alvarez, while mentioning "Barra", i.e. ʿAddi Baro, describes with awe "Debarua", i.e. Debarwa, as the rich settlement of the *baḥər nägaš* (BeckHuntAlvar 98, 104f., 112, 118f., 125) – who ruled not only Ḥ., but the whole ↗Märäb Məllaš, for which the term "Ḥ." is often used interchangeably.

Ḥ. was seriously threatened by the Muslims led by ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") in the mid-16th cent., when its *śəyyum* was killed by Sāliḥ, a page of *amīr* Muǧāhid b. ʿAlī (BassHist 203). After Grañ's fall, the Ottomans established themselves on the coast. The *baḥər nägaš* ↗Yəsḥaq eventually allied with them, so that Ḥ. was included in the Ottoman rule from the 1560s to 1578, with Dəbarwa as its centre (↗Ḥabeš). Recovered again by the Ethiopian emperors, the northern power was split by appointing several governors; but in the 17th cent. a ↗Däqqi Täššəm dynasty, loyal to the ↗Gondärine kingdom, could emerge with *däggiyat* ↗Habsəllus, Ṣäʿazzäga (near Asmära) becoming his power base. Ḥ. was then to gain a high degree of autonomy and to include Säraye; in the 18th-cent. versions of the ↗*Śərʿatä mängəśt*, it appears devided into *Amasen gra* and *Amasen qaññ* ('northern' and 'southern Ḥ.', s. HuntGeogr 249, cp. Varenbergh 1915–16: 25). The customary laws of the Däqqi Täššəm in Ḥ. were collected and unified under a new law-code, the ↗*Ḥəggi Habsəllus*, while other districts within the region kept their own customary law (e.g., ↗Karnäššəm). The successive governors mostly came from Habsəllus's dynasty, which split up into two competing branches, the (Ǝnda) Ṣäʿazzäga and the (Ǝnda) ↗Hazzäga. Their power extended even over Bogos, which paid tribute until it became Egyptian in the 19th cent.

The Ḥ. leaders, interested in the protection of trade routes, mainly kept practical relationships with the Ottoman administration of Massawa and surroundings, including marriage relationships; oral tradition also knows of treaties with the ↗*naʾib*. In the 18th cent. the *naʾib* founded Bet Mak̲ʿa (today's hill called Forto in Asmära) with Muslim settlers who had acquired rights to graze lands. Travellers coming from the Red Sea sometimes first stayed here, before getting permission to enter the Ethiopian empire.

Since the end of the first half of the 19th cent., Ḥ. has experienced Catholic presence and missions, falling within the Apostolic Prefecture, then Vicariate (1847) of Abyssinia, and witnessing the subsequent activities of the French ↗Lazarists and the Italian ↗Capuchins, presently settled in the Eparchy of Asmära (↗Catholicism). Starting from the late 1860s, a religious reform movement (the "Bible readers") in Ḥ. led to the establishment of close ties with German and Swedish missionaries and a partial detachment from the Ethiopian leadership; an important number of priests, close to the Ḥ. leadership, declared themselves Protestant (especially in Ṣäʿazzäga). This was followed by punishment raids by *aṣe* ↗Yoḥannəs IV; in the long term, however, ↗Protestantism established itself permanently in several villages.

The 1870s saw a virtual depopulation of Ḥ. due to warfare and famine. In October 1875 Egypt annexed Ḥ. with the declared aim of establishing a buffer zone with the realm of *aṣe* Yoḥannəs IV, but had to retreat quickly a few weeks later following the dramatic defeat in the battle of ↗Gundät; the Emperor appointed *däggiyat* (later *ras*) ↗Wäldä Mikaʾel Sälämon of Ḥazzäga as governor of Ḥ. (including Bogos), who, however, quickly submitted his province to Egypt. In 1876 the re-appointed governor of Ḥ. ↗Ḥaylu Täwäldä Mädḫən (titled *śəyyumä ḥamasen*) from Ṣäʿazzäga was killed by the Egyptian-supported *ras* Wäldä Mikaʾel. The new governor created by *aṣe* Yoḥannəs IV, the Təgrayan *ras* Baryaʾu, was also killed by Wäldä Mikaʾel in 1878 in the battle of Bet Mak̲ʿa, the site of which corresponds to what is today the village of Ḥaz Ḥaz (lit. 'catch catch', alluding to the battle, KilHDic 120, 247). This was followed by the appointment of *ras* ↗Alula Ǝngəda as governor, who established his military camp in ʿAd Täk̲lay and later changed his residence to Asmära; he featured a new form of central government and, through regular raids, extended again the Märäb Məllaš from Ḥ. to Bogos. In July 1889 Ḥ. was annexed by Italy, which used the local rivalries to enforce its supremacy (↗Ḫadgä Anbäsa). In 1899 Asmära became the capital of the new Colonia Eritrea and also served as capital of Ḥ.

In local usage, the term Ḥ., although no longer a (sub-)province designation after 1995 (↗Eritrea: Administrative division), continues to be applied both geographically and culturally, especially when descent is concerned. Alternatively *käbäsa* is also used, a wider Təgrəñña term that means simply the "highland(s)" and is originally a Təgre term used by those leaving at the slopes of Ḥ. (but is etymologically distinguished from the ethnonym Ḥabäša, s. Fiaccadori 2004:126; Littmann suggests etymological connection between *käbäsa* and *Ḥabäsa* through the Təgre language; s. DAE IV, 4). Territorially, Ḥ. extends as far as ↗ʿAd Täkäläzan in the north-west, ↗Ḥəmbərti in the south-west, ↗Näfasit in the north, while reaching in the south the area just north of Dəbarwa; it includes the historical regions of Dämbäzan, Däqqi Täššəm, Karnäššəm, ↗Loggo Č̣əwa, ↗Šäwʿattä ʿAnsäba, Saḥarti, Mənabä Zärʾay, Käbäsa Č̣əwa, Wäkkarti, Lamza and Täkkälä Agäba (cp. D'Amelio 1911:153). Since colonial times, Ḥ. has developed its role as an economic and political centre of Eritrea (possessing ca. 80 % of Eritrea's industries in the colonial period, as well as today). State leaders often originate from Ḥ.

Following famine and fragmentation of land, in the 19th cent. groups of Ḥ. inhabitants migrated to other areas, especially in Western Təgray. Together with other Təgrəñña-speakers from Təgray, these "Ḥamasenay" settled, e.g., on the Šire-Kunama borderlands (Taḥtay Adyabo), formerly Kunama grazing and hunting areas, and in the fertile Wälqayt highlands. They also appear as semi-nomadic cattle-herders in the ↗Ḥumära area.

Wolbert Smidt

Ḥāmid b. Ṣiddīq al-Hararī

Ḥ. (حامد بن صديق الهرري) was an 18th-cent. writer from ↗Harär. Ḥ. is known by three treatises he wrote, preserved in a manuscript written between 1756 and 1765, now in the Vatican Library (Vat. Arab. 1791).

The first treatise, *Tanbīh an-nāʾimīn* (‘The Awakening of the Sleepers’), contains admonitions and counsels in a sermon-like style with several quotations from the Koran and the prophetic traditions (*ḥadīt̠*).

The second, *al-Ādāb al-ǧāmiᶜa* (‘The Comprehensive Guide for Good Behaviour’), gives rules for different situations – social, economic, religious – of life. It recommends some Ṣūfī practices, especially the participation in the ↗*d̠ikr*. Ḥ. mentions the most-venerated *šayḫ* ↗Ḥusayn of Bale and the national hero of Harär, ↗Nūr b. Muǧāhid. He also tells his readers that the *amīr* Ḥāmid b. Abī Bakr (1733–47) abolished the ↗*waqf* (pious endowment) and other religious institutions in Harär. They were reinstalled, however, by the ruling *amīr* ↗Aḥmad b. Abī Bakr (1755–82).

The third treatise, *Kitāb an-Naṣīḥatayn li-salāmat ad-dārayn* (‘The Two Counsels for the Well-being in the Two Worlds’, i.e. the present life and the one to come) is also styled like a sermon. The two counsels mean: honouring and following the ancient authorities and preventing modern people from sinning and committing injustices. It is a pamphlet against the introduction of reprehensible innovations (*bidaᶜ*, sg. *bidᶜa*) into religion, law and daily life. Such messages reveal that Ḥ. was a conservative Sunnī theologian.
Lit.: ROBERT BRUNSCHVIG, “L’Islam enseigné par Ḥāmid b. Ṣiddīq de Harar (XVIIIe siècle)”, in: *PICES* 4, vol. 1, 445–54 [repr. in: ABDEL MAGID TURKI (ed.), *Études d’islamologie*, vol. 1, Paris 1976, 329–38].

Ewald Wagner

Ḥamid Idris ᶜAwate

Ḥ. (ሐሚድ፡ ኢድሪስ፡ ዐዋቴ; d. 1962) was an Eritrean liberation leader and first field commander of the Eritrean Liberation Army. Much of Ḥ.’s

Ḥamid Idrīs ᶜAwate “martyr” on an Eritrean Liberation Front poster, based on his only known photo preserved in the police files of Aqordät police station; photo courtesy of Günter Schröder life remains obscure and controversial. Born into a ↗Beni ᶜAmər clan and according to some accounts with also connections in the Gindaᶜ area, he spent his early years as a farmer. In the early 1940s, however, he turned to so-called ↗šəfta activities, partly in response to attacks by rival highland gangs and perhaps for more personal reasons, too. His activities were considered serious enough for the British Military Administration to offer in 1949 a reward for his capture. Following an amnesty offered by the British authorities in 1951, Ḥ. returned to farming for several years. But by 1956 he had again taken up arms owing to continued attacks from highland šəfta and in protest against land policy in the Barka region.

His activity against the security forces in the late 1950s coincided with the growing belief among a number of Eritrean nationalists in the need for armed struggle against creeping Ethiopian violation of Eritrean autonomy. Ḥ. was persuaded, possibly by his fellow Beni ᶜAmər ↗Idrīs Muḥammad Adim, to join the Eritrean Liberation Front and continue his militia activity under the auspices of the liberation movement. At the head of no more than a dozen soldiers, he led an attack against an isolated police post in the ↗Barka region in September 1961, which has been said to mark the "official" beginning of the armed struggle. The liberation forces would continue to grow, but Ḥ. himself died of natural causes shortly after. Like other fighters who died during that period, he is considered martyr by the official Eritrean historiography.

Perceptions of Ḥ. vary. To some, he was the leader of a "peasant militia" fighting for their rights against the injustices of the British and, later, the Unionist Eritrean government. To others, he was merely the most successful of a number of rural šəfta-bandits in the 1940s and 1950s, raiding neighbouring peoples such as the ↗Kunama for personal gain. The reality may be assumed to lie somewhere between the two extremes.

Ḥamir, Ḥamər ↗Ḥamta

Hamitic

There are three basic concepts about what constitutes H., one raciological, one cultural, and one linguistic; sometimes these concepts are mixed.

The term H., as opposed to Semitic, has been in use since the middle of the 19th cent. in works of such scholars as Lepsius (1863), Beke (1845), Renan (1855) and Lottner (1860–61). Following the term Semitic (connected with the name of Noah's son Shem), the term H. was coined after the name of Noah's second son, Ham. Thus, the names of Noah's sons and his grandsons were used as a convenient source for naming different language groups, based partly on the Table of Nations in the Bible (Gen 10) where Shem, Ham and Japheth (the sons of Noah) were seen as ancestors of the Semitic, black African and Indo-European "races" and language groups, respectively. In the classification of Lepsius (1863), the "gender languages" (as opposed to the "no-gender languages") are divided into "Japhetic (Indo-Germanic), Semitic and Hamitic" languages.

The sons of Ham are Cush, Mizraim (*Miṣrayim* 'Egypt'), Put (*Pūṭ* 'Libya (?)') and Canaan (*Kənāᶜan* 'Canaan'). Ignoring Canaan (Canaanite is a Semitic language), the remaining three sons of Ham were regarded as corresponding to the language sub-families of the H. family, namely, Cushitic, Egyptian and Berber.

The usage of the term H. is closely connected with the so-called "Hamitic" hypothesis, which considers the African languages genetically related to Semitic as belonging to one language family, named H. (henceforth the original name of the super-family, ↗Hamito-Semitic).

The extent of H. has varied in the history of African studies. Lepsius (1880) correctly included Hausa (Chadic) but "Hottentottisch (Koikoin)" as well (which is not followed today).

A strong difference was seen between H. and the more southern Bantu and Sudanic languages ("Sudansprachen"). Lepsius (1880) used twelve linguistic criteria that distinguish H. from Bantu, such as prefixation vs. suffixation, feminine gender and word-order. The most important criterion was the existence of gender. Already in the language classification of Bleek (1851), the "Stirps sexualis" (Semito-Africani [Semitic, Cushitic, Berber] + Copti + Indogermani) is in direct opposition to the Bantu languages, which are characterized by class prefixes.

In the 19th and early 20th cent. there were many reflections on the origin of peoples and the early history of Africa. The so-called H. were now seen as "Caucasoid" and the racist concept of superior H. peoples from outside of Africa conquering great parts of Africa played an important role. The superiority of cattle-breeding nomadic peoples over sedentary farmers was generally assumed. These thoughts even inflated into a more universal historical concept. The origin and expansion of the great African groups Bantu, Sudanic, Khoisan and (Semito-)H. was therefore explained with the help of linguistic and racial characteristics. Thus the Sudanic peoples were seen as a mixture of H. and Nigritic components. Similarly the Bantu languages were regarded as a merger of "a Hamitic father and a Nigritic mother" (Meinhof 1912).

Seligman stated as late as 1930 (and in several later editions) that "every trace or sign of what is usually termed 'civilized' in Africa was attributed to alien, mainly Hamitic, origin" (Sanders 1969:530). These views have no longer been acceptable since the last half of the 20th cent. The assumption of the H. peoples as immigrants from the Near East into Africa is an attempt to account for their physical similarity to the Semitic-speaking and Indo-European-speaking peoples. The idea of a Near-Eastern origin is today only supported by a small minority; most prefer to see the Semito-H. (Afro-Asiatic) "*Urheimat*" ('original homeland') in the Sahara.

The linguistic arguments in favour of the Hamitic hypothesis have been rejected in the course of the 20th cent. Today H. is seen as an obsolete term and those who use it utilize it exclusively as a linguistic term to designate the non-Semitic members of the Afro-Asiatic language phylum. Only a few scholars assume a genetic unity of the H. language groups in contrast to the obvious unity of the Semitic branch.

Hamito-Semitic

H.-S. (also Hamitosemitic and Semitohamitic) is the original name designating a huge language phylum for which some other terms have been proposed, such as Erythraic, ↗Afro-Asiatic, or Afrasian.

The term H.-S. was originally used in the framework of the so-called "Hamitic" hypothesis, according to which the language family denoted by the term consisted of two sub-families, ↗Semitic and ↗Hamitic. The idea of binary opposition between Hamitic and Semitic found its expression in works of Lepsius (1863), Müller (1876, where the term H.-S. is introduced), Cust (1883) and Meinhof (1912).

A first comparative treatment of the H.-S. languages is given by Müller (1887:224–314). In this work all H.-S. language groups except Chadic are included.

Meinhof, in his *Die Sprachen der Hamiten* (1912), includes all current Afro-Asiatic languages, but he regards Ful, Maasai (Nilo-Hamitic) and Nama as Hamitic as well, which are nowadays classified differently. His reason for doing so was not so much based on racial ideas but on linguistic principles, such as ablaut, grammatical polarity and grammatical gender. In the case of the Nama (Khoisan language group) he saw the existence of grammatical gender (with the masc. *-b* compared with Beğa *-b* and Egyptian *p-*) as decisive, rather than relying on racial properties which are hardly to be found in his work. However, in the inclusion of Ful and Maasai, he regarded the tall stature of their speakers as an important hint. Meinhof's (1912) work was an important step towards a more linguistic treatment of what constitutes Afro-Asiatic. Thus he focused on features like grammatical gender and the inclusion of the "Hottentoti (Koran + Naman)" (Bleek 1851, Meinhof 1912).

The current hypothesis supposes the ancestor language to develop into coordinate decent lines (Semitic, Egyptian, Berber etc.). This approach was suggested already by Beke (1845). Bleek (1851) treats three members of his Semitic-African ("Semito-Africani") language family, namely, Semitic ("Semitae"), Cushitic ("Gallaei") and Berber ("Berberi") as sister families. Likewise, Lottner (1860–61), although using race concepts typical of that time, classified Semitic, Egyptian, Berber and Cushitic as equal members of a larger language family. Delafosse (1914) presented the internal classification of Afro-Asiatic languages. The fundamental work by Cohen (1947), although continuing to use the term H.-S., in fact rejects the dichotomic opposition of Hamitic and Semitic and secures the wide acknowledgement of the Afro-Asiatic hypothesis. Greenberg (1950) includes Chadic in the Afro-Asiatic and presents a five-branched language family. The status of ↗Omotic is a matter of discussion until now.

Greenberg (1966) argued against grammatical gender as a criterion in classification, but stressed the relevance of a feminine formative *-t*. His use of "mass comparison" was strongly criticized by Möhlig (1983:157f.) and others.

All language groups which are nowadays considered to form an Afro-Asiatic or H.–S. genetic phylum have been discussed since the beginning of comparative work in the 19th cent. In Müller's (1887:224–419) comparative treatment of the Semitic and Hamitic languages only Chadic languages were not included. Chadic was, however, considered as "Hamitic" by Lepsius (1863) and Müller (1886) also spoke about the Hamitic character of the Musgu language, later designated as Chadohamitic or Chadic.

A new stage in the comparative grammar of H.-S. languages was reached with the work of Rössler (1959; 2001) who laid emphasis on the genetic reconstruction of the verbal inflexion and of the phonological system of the proto-language.

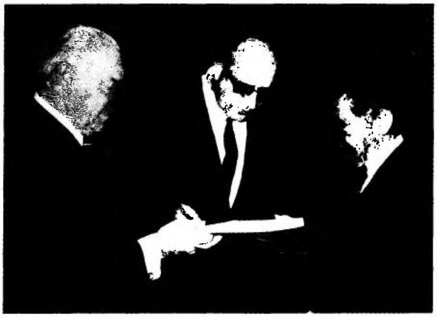
Ḥamle ↗Calendar, Christian

Hammerschmidt, Ernst

H. (Eduard Maria Ernst H.; b. 29 April 1928, Marienbad [Bohemia], d. 16 December 1993, Vienna) was a prominent scholar of ↗Ethiopian studies (*Äthiopistik*) who succeeded in the institutionalization of the discipline within the German-language Oriental studies framework.

H. studied Oriental languages, theology and law (Bamberg 1946–48, Innsbruck 1949–50, St. Florian 1950–51, Salzburg 1951–52, Vienna 1952–53, 1957–58, Münster [Westfalen] 1954–55 and Oxford 1955–57) and in 1958 was ordained as an Old Catholic priest. After habilitation (1962) and appointment as Extraordinary Professor (University of Saarbrücken 1968), in 1970 he became Full Professor (*Ordentlicher Professor*) of African Studies at the University of Hamburg. Till his retirement in 1990, H. lectured in Ethiopian Studies, with codicology, old Ethiopian (Gəʿəz) literature, Ethiopian church and history



Ernst Hammerschmidt (middle) meeting Ḫaylä Śəllase I in Stuttgart during his state visit in Germany; photo 1954, courtesy of Ilse Hammerschmidt

in the focus of his attention. H. acquired four doctorates: Dr. phil. (1952), Dr. theol. (1953), Dr. jur. (1986) and Dr. litt. (1989).

Among H.'s important contributions was the foundation in 1977 of the ↗*Aethiopistische Forschungen*, the only scholarly monograph series specializing exclusively in Ethiopian studies. He continued following it till his death in 1993 (the last volume he edited was no. 35). Of fundamental importance for philological research within Ethiopian Studies were also his catalogues of the Ethiopian manuscripts from the libraries of Lake Ṭana monasteries and Germany published in the *Verzeichnis der orientalischen Handschriften in Deutschland* (VOHD) series (since 1983 with Veronika Six, s. HamTana I, HamTana II, SixTana III, HamSixBerl).

H. assembled a rich specialized private library (today in possession of the Asia-Africa-Institute, University of Hamburg). His extensive co-operation in Oriental Christian boards and his broad interests contributed highly to the establishment of modern Ethiopian Studies in Germany.

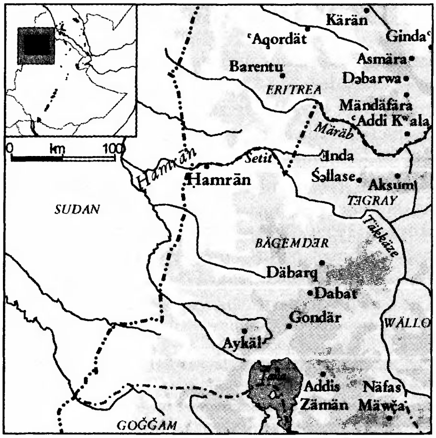
Siegbert Uhlig

Ḥamrān

The Ḥ. (حمران, var. Ḥumran/Ḥomran, 'the Red[s]') are an originally nomadic ↗Beğa group in the Ethio-Sudanese border area, mainly in the Gadārif District in Sudan (in the Šukurīya nazirate), south of ↗Kassala. The Ḥ. are sometimes identified with the Bišārīn in literature, but they are separate groups, like the ↗Haḏánḏowa or the ↗Beni ᶜAmər. The Ḥ. dwell farther south from the other Beğa groups (which are concentrated in the Beğa and Tokar districts of Sudan). The Ḥ. traditional grazing areas along the ↗Setit stretched as far as ↗Ḥumära (now in Ethiopia) and Kunama in the east. By the mid-20th cent. the Ḥ. counted only ca. 700 members (Paul 1954: 139); in the past the group had been much more numerous.

The Ḥ. speak Arabic (therefore they are also known in literature as the "Ḥ. Arabs", cp. Baker 1867; Myers 1876) and claim to be of pure Arab stock, as a branch of the Ḥarb. In fact, they were apparently a branch of the Arteyga Beğa, with whom they share the same original ritual (*šāfiᶜī*). According to a local tradition, their ancestor Muḥammad Adarōb (for genealogy s. Paul 1953: 73, 142) first migrated to the Atbara and later to the Setit. Well into the 19th cent. the Ḥ. still spoke Təgre. Due to intermarriages they are closely interrelated with other groups in the Setit area.

Historically the Ḥ. were subjects of the ↗Funğ sultanate. Until the 18th cent., they were one of the "ten districts of the Sobaha [= Eastern Sudan]" (Penn 1934:64) indirectly governed via the Beni ᶜAmir *diglal* (vassal of Funğ). In the 19th cent. the Ḥ., famous sword hunters (*agagir*, Tgr. 'hunter') of ↗elephants and other game, founded villages (Paul 1953:141; Douin 1941:1232) and became sedentary in Gadārif, along the northern



banks of the Setit. When the Egyptian administration was established, they supported the rebellious ↗Nimrāb (Douin 1936:42) but did not rebel openly and continued living by selling grain to the Egyptian government (Douin 1941: 1198), occasionally paying taxes via the Šukurīya to Khartoum (ibid. 1220, 1232f.; Myers 1876: 179, 180). In the 1880s they did not submit to the Mahdīya, but helped the Egyptian garrison of Kassala; by consequence they were attacked and nearly extinguished by the ↗Mahdists.

Migrations of smaller Ḫ. groups from the Setit explain the fact that there are several Beğa and non-Beğa clans claiming Ḫ. descent (sections of the Haḍánḍowa, and a Ǧaᶜalīyīn-branch in Kordofan).

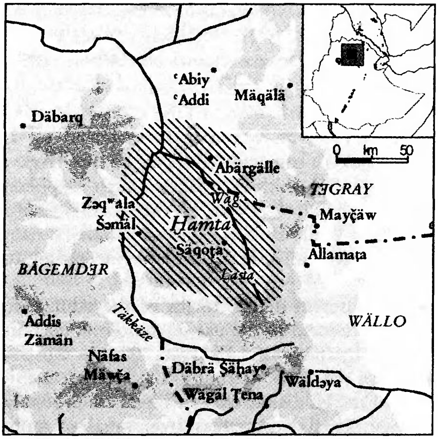
Wolbert Smidt

Ḫamta

Ḫ. (variants Ḫamir, Hamär, Hamər, Hamir, Xamir, Khamir, Ḫaməṭ) live in Abärgälle, Lasta (Säqoṭa), Wag, and Sähala. Their language is ↗Ḫamtaŋa. The term ↗Agäw is sometimes used as a label for these specific Agäw subgroups. Reinisch finds that the root *kam/kəm/ham* means 'cattle' and 'wealth' (1884, vol. 1, 575; vol. 2, 376). Today, the total number of Ḫ. could be 158,000, of which 143,000 are speakers of Ḫamtaŋa, or Eastern Agäw (Grimes – Grimes 2000); the rest speak ↗Amharic. About a millennium ago, the Ḫ. populated a greater region extending into southern ↗Təgray and far into ↗Səmen, according to Conti Rossini (1904:186f.).

The Ḫ. are Orthodox Christians; some still respect a ↗Sabbath on Saturday. In the early 1960s, older Ḫ. of Amdäwärq prayed for rain in the hills in time of drought and interpreted dreams for Ḫ. and ↗Amhara. Trimingham posits that the religious substratum of the Christian Agäw south of Aksum was both pagan and Judaic (TrIslam 54).



The Ḫ. are plough-agriculturalists and animal husbandmen. Simoons (1960) reported that the modes of cultivation, agricultural tools and economic life of the Ḫ. of Sähala differed little from that of the neighbouring Amhara. According to the particular Ḫ. area, crops include *ṭef*, wheat, barley, sorghum, maize, squashes, *nug* (*Guizotia abyssinica*), *tälba* (flax, *Linum usitatissimum*), sesame and cotton. In Bilaz, Səmen, the local Ḫ. have extensive irrigation works at the mouth of the Šikina River. Domesticated animals include cattle, sheep (which are milked), goats, donkeys and bees in cylindrical clay beehives for honey. Ḫ. make no use of fish. Simoons reports Ḫ. craftsmen in Lasta, but their absence in Sähala. Sähala is visited by itinerants like Ḫ. blacksmiths from ↗Säqoṭa, Muslim weavers and, formerly, ↗Betä Ǝsraʾel female potters accompanied by men (Simoons 1960:42f., 75, 102–24, 149, 155, 158, 187, 204).

Ḫ. houses are wattle-and-daub or stone cylinders or ovals with a thatch-cone roof, as well as newer rectangular styles in nucleated villages and dispersed hamlets. Säqoṭa is a bustling town with goods and services provided from shops and an open marketplace. It was bombed during the Ethiopian civil war shortly before the collapse of the *Därg* regime; currently, the Ḫ. are still recovering from the ravages of that war.

Frederick C. Gamst

Ḫamtaŋa

Ḫ. (Amh. ኀምታ, Ḫamta, also referred to as Ḫəmtaŋa) is a language belonging to the ↗Agäw family of ↗Cushitic languages, which is spoken in the region of ↗Wag in the north-western corner of Wällo by the ↗Ḫamta people (variant Ḫamra, pl. Ḫaməṭ, Ḫəməṭ, Ḫamər according to dialect).

The different dialect forms of the ethnonym Ḫ. are reflected in the use of the terms Chamir (Reinisch 1884) and Khamta (Conti Rossini 1904) in the older literature for different members of the Ḫ. dialect cluster. There are probably four principal dialect areas: from north to south Abärgälle (which would seem to correspond to Conti Rossini's Ḫ.), Zəqʷala, Säqʷäta, and west of the Täkkäze river, Sähala. Differences between the recorded dialects are small and are mostly phonological and lexical, except that Conti Rossini's Khamta does show some considerable morphological variation.

Many speakers of Ḫ. are bilingual in Amharic or, in the area of Abärgälle, in ↗Təgrəñña and there are a number of people who identify themselves as Ḫamər/Ḫəməṭ but who no longer speak the language. Monolingualism is now mostly restricted to women and the elderly in more remote areas. The number of mother-tongue speakers has been indicated at 143,369 (Grimes et al. 2000; CSA 1998). Ḫ. is most closely related within Agäw to ↗Bilin, sharing with the latter a number of morphological and lexical innovations.

Amongst the Agäw languages Ḫ. shows a number of particularly interesting features. In phonology, Ḫ. has uvular (*q*, *qʷ*, optionally glottalized), as well as velar (*k*, *kʷ*, g, *gʷ*) stops. It also has a number of glottalized phonemes (*ṭ*, *q*, *qʷ*, *č̣* and *ṣ*), the same that occur in the neighbouring Ethio-Semitic languages. Glottalized phonemes are generally not thought to have been part of the Proto-Agäw system and their presence in the modern languages (Ḫ., Bilin, ↗Kəmantnäy) is certainly due to the influence of Ethio-Semitic. The Ḫ. glottalized phonemes, however, occur in roots of Agäw origin, occasionally in free variation with their non-glottalized counterparts: *ṭəwu* ~ *təwu*, 'he entered', but more often contrasting with the latter: *ṣəbra*, 'ashes' ~ *səbra*, 'snake'. In more recently collected material (Appleyard 1987, from where all the following data are taken) they also seem to be more frequent than in the older (e.g., Reinisch 1884). Consonant length or gemination is also phonemic in Ḫ. in certain morphological forms (e.g., *abən* 'guest' ~ *abbən*, 'guests'), but lexically appears to be sometimes optional (e.g., *tabbu* ~ *tabu*, 'he threshed'). Accent (pitch accent) placement is also phonemic (e.g., *əfära*, 'boy', *əfärá*, 'girl'; *gə́rək*, 'daylight', *gərə́k*, 'days').

Like all the Agäw languages, Ḫ. has a rich morphology, particularly in the verbal system. The morphological categories and patterns of Ḫ. are for the most part similar to those in other Agäw languages and can indeed be formally related to what is found in the latter, especially the other two northern branches (Bilin, Kəmantnäy). Thus, verbs inflect maximally for a seven-term person system, three persons, sg. and pl., with a further distinction between masc. and fem. in the third person (sg.); in some subordinate paradigms distinction between the 1st and 3rd pers. masc. sg., and the 2nd and 3rd pers. fem. sg., respectively, is neutralized. There are also separate paradigms for affirmative and negative.

Like Bilin and unlike the other Agäw languages, Ḫ. has a special future affirmative main-verb tense alongside the inherited past – non-past (present), e.g., *qalč̣ər*, 'I shall see' alongside *qaläkʷən*, 'I see'. The verbal inventory is greatly augmented by the existence of a large number of subordinate forms, separate paradigms for subject relatives (where the subject of the relative verb and the head noun are identical) and oblique relatives (where the two are not identical), as well as at least 15 basic adverbial subordinate forms (equivalent to 'when', 'because', 'after', 'if', 'until', etc.). There are also several modal forms, such as jussive, imperative, etc., that are used in main-verb position. The verbal complex may also include stem derivation marking such categories as causative, passive, and reciprocal, e.g. *qal-u*, 'he saw', *qal-s-u*, 'he showed', *qal-əšt-u*, 'he was seen', *qal-əšš-uŋ*, 'they saw one another'.

Noun morphology is somewhat simpler, distinguishing at most six case forms and two numbers, sg. and pl. An interesting feature of noun morphology, which is not found in the other Agäw languages, is marking for definiteness as an integral part of nominal inflexion. The marker of definiteness occurs between the noun stem and the marker of case and is sensitive to gender/number (masc. or pl. versus fem.)

and marginally to case (absolute or object or other): e.g., *ŋən-də libu*, 'the house fell down'; *ŋən-də ỉ ŋən-dəyä-t tässun*, 'I built the house'; *ŋəč̣ər ləwä-šän-t ğibun*, 'I bought the black cow'; *ŋən-i-l gʷäyyun*, 'I sat in the house'. This definite marker (*-də/-dəyä-/-i-/-šän-*, etc.), though unparalleled elsewhere in Agäw, clearly derives from a postfixed demonstrative (cf. *əd/əččän*, 'that') to which may be compared the use of the weak proclitic demonstrative *ən* 'this' in Bilin as a kind of marker of "aforementionedness". Reinisch's (1884) Chamir does not have such a developed definite system, but employs various suffixed demonstratives (*-ən* and *-əz* as well as *-əd*) "for emphasis".

Ḫ. ten-word list is:

'one'	*läwa*	'sun'	*kʷära*
'two'	*liŋa*	'moon'	*arba*
'three'	*šaqʷa*	'blood'	*bər*
'fire'	*ləya*	'tongue'	*laq*
'water'	*aqʷ*	'tooth'	*ərəkʷ*

Ḫ. lexicon is particularly close to Bilin, where cognates of all the 10 basic items may be found.

Ḫ. is not used in education or in the media, though some Ḫ.-speakers have expressed a wish that it might be developed in this way (Berhanu Hailu et al. 1995:3). There is no printed literature and, given the dominance of Amharic and Təgrəñña and widespread bilingualism in one or other of these languages, it is evident that Ḫ. is at present an endangered language, though perhaps not as threatened as its now moribund sister language Kəmantnäy.

Ḥanafism

Ḥ. (Arab. المذهب الحنفي, *al-madhab al-ḥanafī*; حنفية, *ḥanafīya*) is one of the four schools (*madhab*, pl. *madāhib*) of Islamic jurisprudence (*fiqh*) that Sunni Islam recognizes as a valid and acceptable way of expounding and implementing Islamic Law (↗*šarīᶜa*).

Eponym of the *ḥanafī* school is Abū Ḥanīfa an-Nuᶜmān b. Ṯābit, called *al-imām al-aᶜẓam* ('the supreme *imām*'), who died in Baghdad while in jail in 767 A.D. at the age of 70.

Among Abū Ḥanīfa's pupils, two played a decisive role in shaping the *madhab* of their master in a systematic way: Abū Yūsuf Yaᶜqūb b. Ibrāhīm al-Anṣārī al-Kūfī (d. 798), who was the first *qāḍī l-quḍāt* (grand *qāḍī*) in the history of Islam in the caliphate of Hārūn ar-Rašīd, and Abū ᶜAbdallāh Muḥammad b. al-Ḥasan aš-Šaybānī (d. 803 or 805), *qāḍī* of Raqqa. Ḥ. thus originated in Iraq and spread in the East to Khurasan, Afghanistan, Transoxiana, Turkish Central Asia and as far as China, and also southwards as to India. *Ḥanafīs* were less present in other part of the Islamic world, although in Maghrib, Ifrīqīya (Tunisia) and Sicily Ḥ. was not unknown (for further details s. Heffening in EI²).

The historical fate of Ḥ. was eventually decided when the Seldjuks first, and then the Ottomans adopted it as their exclusive official *madhab*. The Ottoman Empire thus brought Ḥ. everywhere it established its rule and superimposed the *madhab* of Abū Ḥanīfa on the pre-existing legal schools.

Major distinctive feature characterizing Ḥ. within the four Sunni schools of law is the free recourse to *raʾy* – the personal judgment of the jurisprudence in the process of *qiyās* (the analogical method of reasoning) – to find solutions for unprecedented legal questions. Thus *ḥanafī* jurisprudence usually clarifies and solves new cases by analogy with the previously solved ones, as they try the best of their personal reasoning to manage to single out at least one common element linking the new case to the previous one (*ᶜilla*). Also very peculiar in Ḥ. is the use of *ḥiyal*, legal devices which permit the maintenance a full formal respect of the unchangeable principles of the law, while practically forcing the limits fixed by the recognized rule.

In Ethiopia, Ḥ. has a long history which can be traced back at least to the seven Islamic principalities (↗Ifat, ↗Däwaro, ↗Arabäbni, ↗Hadiyya, ↗Šarḫa, Bali [↗Bale] and ↗Dära) mentioned by al-ᶜ↗Umarī in his *Masālik al-abṣār*, written between 1342 and 1349. According to this source, only Ifat was at that time *šāfiᶜī*, while the remaining six were all *ḥanafī* (al-ᶜUmarī in UmMasGaud 5, 14f., 17ff.; UmMasSezg 18f.). A century later, al-↗Maqrīzī affirms that even in Ifat, *ḥanafīs* were increasing in number (MaqIlmam 11; MaqIlmam^2 7). It thus seems that Ḥ. was the most widely diffused *madhab* in Ethiopia up to the middle of the 15th cent. We are not able to identify the details of the first coming of Ḥ. to Ethiopia. We are well aware of the existence of a very famous *ḥanafī* jurist originating from Zaylaᶜ – ↗ᶜAbdallāh az-Zaylaᶜī, who lived in Cairo during the rule of an-Nāṣir b. Muḥammad and was the main informant of al-ᶜUmarī. Even if we may surmise that az-Zaylaᶜī was an outstanding representative of a wide group of *ḥanafī* jurists from Zaylaᶜ, we lack information about the origin of this possibly very old lineage of *ḥanafī* scholars in Zaylaᶜ or elsewhere in Ethiopia. In a very hypothetical way, on the basis of the process of the spread of ↗Šāfiᶜism in Ethiopia and Somalia, which started from the *šāfiᶜī* academies of the Yemen (especially Zabīd and Ḥaḍramawt), we could imagine a direct role played by some Yemenite *ḥanafī* schools in the first expansion of Ḥ. in Ethiopia. Information about Ḥ. in the Yemen prior to the Ottoman conquest is apparently very limited. Thanks to al-Ḫazraǧī, we know at least one case of a *ḥanafī* jurist from Zabīd who stayed in Ethiopia for almost six years: it was Abū r-Rabīᶜ Sulaymān b. Mūsā b. ᶜAlī b. Ǧawn al-Ašᶜarī, who, in about 1249 A.D., left Yemen for Ethiopia, where he remained till 1255 A.D. (Cerulli 1943:276ff.). We can also add in this connection that some oral traditions collected by Hussein Ahmed (2001:67) in Wällo confirm that the *madhab* of Abū Ḥanīfa spread in Dawway from Zabīd.

The original prevalence of Ḥ. was greatly reduced by Šāfiᶜism, especially in the south of Ethiopia. It is not known in detail how exactly the *madhab* of aš-Šāfiᶜī spread in Ethiopia. In the renowned hagiographies of *šayḫ* ↗Ḥusayn of Bale (end of 13th cent.), we find mention of two legal disputes between the *šayḫ*, who was a *šāfiᶜī*, and two *ḥanafī faqīh* (one of them from Dära) on the legitimacy of beer and hydromel. Both discussions end with the victory of *šayḫ* Ḥusayn and therefore with the spread of Šāfiᶜism. The *Nuzhat al-asrār* also tells us of the arrival in Bale of two famous and widely used manuals of *šāfiᶜī fiqh*, the *Kitāb at-Tanbīh* and the *Kitāb al-Muhaḏḏab* by aš-Šīrāzī (Aḥmad al-Ḥusaynī – Muḥammad al-Ḥusaynī 1345 H.:28f.; CerStud II, 8–13, 17f.). From these episodes, we may infer that Šāfiᶜism arrived in Bale and Dära from the Yemen and undermined the position of Ḥ.

Resistance of *ḥanafīs* must have been strong. In the middle of the 15th cent., Bale and Dära were still *ḥanafī* (MaqIlmam 13; MaqIlmam^2 8), but in the long run Šāfiᶜism won in the whole of southern Ethiopia. A certain role was possibly played by *šāfiᶜīs* of Somalia, especially of Merca, who were linked by strong ties with the sanctuary of *šayḫ* Ḥusayn of Bale (CerStud II, 26).

Little is known about the history of the Islamic legal schools in ↗Harär. *Ḥanafīs* must have been present in the walled city since early times, their number is unknown. In the mid-18th cent., *faqīh* ↗Ḥāmid b. Ṣiddīq of Harär wrote a work in passionate defence of the high rank of Ḥ. within the four legal school, but evidently from a rear-guard position and with the typical attitude of the representative of a minority group, menaced by extinction (Brunschwig 1974). The Egyptian occupation in Harär, even if apparently strengthened Ḥ. in the city (TrIslam 232), did not stop the *madhab* slowly fading out. According to Cerulli, who visited the town in 1926–27, Ḥ. in Harär was reduced to a scanty presence in the ᶜAmmār Garäčče area in the quarter of Badro Bari (CerStud I, 45).

Ḥ. is nowadays the prevalent legal school of Islam in the highlands of Wällo, in ↗Awsa, where it was brought by *kabīr* Ḥamza, whose ancestors were of alledged Harari origin, and in the regions of ↗Qallu, ↗Boräna, ↗Wärrä Himäno, Wärra Babbo and ↗Yäǧǧu (Hussein Ahmed 2001:66f.). Hussein Ahmed collected many different oral traditions about the first appearance of the *madhab* of Abū Ḥanīfa in Wällo. One of them affirms that Ḥ. was introduced from Shām (Syria) to Təgray and hence, via Yäǧǧu, to the rest of Wällo, while, as we mentioned above, a second path of penetration was from Zabīd to Dawway (south-eastern Wällo). According to another informant, Ḥ. was the oldest legal school in Wällo and it is nowadays the most widely spread in the whole region (ibid. 66, n. 147). Hussein Ahmed explains this apparent exaggeration of the antiquity and importance of the *ḥanafī* presence in Wällo by the influence exerted on his informant by the "later and rapid expansion" of Ḥ. in the region, caused at least partially by its "tradition of moderation". If we imagine a late but rapid diffusion of this *madhab* in Wällo, we should take into consideration the role the Ottoman Turks could indirectly have played in bringing Ḥ. closer to the region by their conquest of the Eritrean coast. Historical data confirm that there existed a "northern route of Islamic expansion from the Dahlak islands through Tamben and Enderta to western and central Wallo" (ibid. 193). Ḥ. could have followed this path, as the overwhelming majority of Muslims of the Eritrean coast was and still is *ḥanafī* (TrIslam 232).

In the costal region, the first phase of the spreading of Ḥ. could be very old, but the Ottomans bear apparently the main responsibility for the spreading of Ḥ. in Eritrea since their arrival in the Red Sea area in the first half of the 16th cent. Massawa fell under Turkish rule in 1557 A.D. Since then, Ḥ. had no rival *maḏhab* in the coastal regions of Eritrea and from there it spread all over the country, where it is nowadays the major legal Islamic school (MuhTarih 287). Only Mālikism, coming from the neighbouring Sudan, has recently started strengthening on the coast and especially in the highlands of Eritrea. At the beginning of the 20th cent., the Ottoman presence, combined with the collaboration of the *ṭarīqa al-mīrġanīya* (↗Islamic brotherhoods), favoured the passage of a complete set of books on *ḥanafī* jurisprudence from al-Ḥudayda to Eritrea, where they surely contributed to the strengthening of the *maḏhab* (Hofheinz 1995).

Finally, according to Trimingham (TrIslam 205), Ḥ. was, and perhaps still is, present in ↗Ǧimma, where the majority of inhabitants is *Šāfiᶜī*. It was introduced there from Gondär by a *walī* called ᶜAbdalḥakīm.

Handicrafts

Craftspeople and artisans

H. is the professional transformation of raw materials into commodities which are produced in excess of the direct requirements of the household. A characteristic of H. is the individual single production and ownership of the generating materials and tools. The distribution and sale of the end-products are the responsibility of the artisans as well. Pre-condition for the emergence and development of H. is that a society produces a surplus to maintain a group of specialists.

Although not all H. occupy an artisan for the entire year, most H. require at least certain fixed cycles of labour, as is the case of ↗iron-melting, or even ↗pottery. ↗Weaving and woodworking (↗Wood) are less bound to time periods and can therefore be exercised as a side-line occupation. The profession of full-time craftsmen is usually hereditary. Until today, H. have throughout the rural areas become the common form of commodities fabrication. Even in urban areas, in the midst of factories and manufactories, H. are prospering.

The period in which the eastern Horn of Africa established a differentiated society with professional artisans cannot be specified due to the still rudimentary prehistoric sources. Aside from ↗Aksum and its surrounding area, only a few archaeological findings are known in this matter. In the tomb-chambers of ↗Yəḥa, abundant pottery was found, probably indicating that professional ceramic-production was developed since the 6th or 5th cent. B.C. A wide variety of ceramics like jars, bowls, flasks and beakers was produced. The processing of imported metal probably started at the same time. Iron was used for tools and ↗weapons, including ↗knives, billhooks, sickles, saws, hammers, nails and ↗spear points. A wider range of artefacts was made of copper alloys.

Among luxury goods, ↗ivory worked with great competence needs to be mentioned. The carved Aksumite stelae and tombs show the high standards of the stonemason. In southern Ethiopia research on prehistoric hide-working (↗leather) was recently undertaken in ↗Konso.

Leatherwork

Tanning belongs probably to the oldest H. in Ethiopia. Preferably domesticated animal's hides, e.g. cattle and goats, are processed, but also those of monkeys and wildcats. Where leather clothing was customary, as in the south-west and Oromiyya, the processing has reached a high standard. The work was done by men and/or women, depending on the region. After the prohibition on wearing leather clothing by the imperial government, tanning as a H. in southern Ethiopia has strongly diminished. A further setback was limited demand for leather sandals, which have been replaced by sandals made from old car tires. The formerly wide-range of leather objects, like clothing (capes, skirts, belts, sandals, hats), sacks, cases, packing-straps, saddle-gear, shields (often made from rhinoceros skin) etc. has become rare. Nowadays, in many regions only cow hides are scraped for use as sleeping mats. One exception is the south-west, where pastoralist women wear leather skirts.

Pottery

Ceramic technology has been practised until recent times in a traditional way. Clay is often mined by tunnelling and usually tempered with mineral admixtures. Firing was and is still done at comparatively low temperatures. All locally produced pottery is modelled by hand without the use of the potter's wheel. In most regions pottery was considered women's work, although the firing was done by men. Even though dishes made of aluminium and plastic have become very common, certain ceramic products (e.g., black polished ware) are still very popular.

Ironwork

Forgeable iron is extracted as steel through reduction of iron ore (Fe-O compounds). From the *Periplus maris Erythraei* (1st cent. A.D.) we know, that iron was imported to ↗Aksum for further processing. Around 1630 Gerson ben Elizer reported that the ↗Betä Əsraʾel, who were responsible for the supply of iron to the Amhara, had an equivalent value for both iron and gold. Bruce (BruNile) also gives an account of the rareness of local iron at the end of the 18th cent. Although iron-mining was practised in Šäwa and in Təgray, the need seems to have been covered by imported iron-bars. In the south, e.g., in Wälläga, Käfa and Geeraa and and among the Aari, Basketo, Čako and Dime, iron-melting was common, at least during the 19th cent. In recent times indigenous iron-melting has been documented only among the Dime. Today, industrially produced steel or scrap-iron is processed.

Besides of hammering, most ↗blacksmiths also master the techniques of forge-welding and hardening the steel. Some of them (e.g., in south-western Ethiopia) also know how to cast non-ferrous metals. Nowadays many blacksmiths in urban areas have increased their scale of production, using modern technology. The majority of artisans in non-iron metals were and until today are immigrant Arab, ↗Indian, ↗Armenian and ↗Greek craftsmen, who settled in Ethiopia.

Iron is used for the production of many agricultural tools (↗Agriculture): adzes, axes, machetes (south-western Ethiopia) and billhooks for clearing; plough-shares, socket hoe-blades, ice-axe-like blades, sickles and knifes for harvesting and in the ↗*ənsät*-areas, large, broad knives are needed for the *ənsät*-processing.

Local weapon production include iron arrowheads, spears, lances and daggers. The socket spear-blade is very common and many spears have an additional iron spear shoe. Spear-blade and spear-shoe have regionally distinctive designs.

↗Jewellery made from metal is either hammered or cast. To the surgical inventory of a healer belong spatula for teeth, scalpels, chisels for bones, needles and tweezers. For ceremonial objects in South Ethiopia the cast fore-head jewellery (↗*Kallačča*), bracelets, bells and spears (sometimes with double blades) need to be mentioned. The religious items in the Christian part of Ethiopia include locally made ↗crosses, basins, sistra, bells of ↗gold, silver or bronze.

Weaving

Unlike most African countries, where industrial fabrics drove out the local weaving production, in

Ethiopia weaving manufactures are still prospering. Their products range from heavy cloth to light shawels (↗Clothing). Different weaving techniques spread during the last centuries. One of these techniques, the use of the mechanical double-shafted loom, reached the eastern coast from Asia and has prevailed throughout the country. Preferably, home-spun cotton is processed, but lately industrial thread is used for warps and decorative borders. Only men work on the looms, the spinning is done by women; in the south-west also by men. The ↗Dorze specialized in this H. Nowadays, "Dorze" has even become synonymous with weaving.

Woodwork

Where professional wood-workers are found, like the Gurage, they produce bowls, cups, stools, footed trays and combs. Since the Italian occupation they have also made beds, cupboards and shelves.

Other techniques and specialized crafts

Before the Ethiopian conquest, in the ↗Käfa kingdom further differentiation of H. was known: there were carpenters, masons, gold- and silversmiths. The tanners were divided into those, who made shields and saddles and those who carried out other leather-works. Some regions, like Gurage (↗Fuga), specialized in wood-carving and house-construction. In recent times ↗house-constructors in Konso established themselves as independent craftsmen. The decline of tanning in some places made former tanners turn to wood-working. Near (semi-) urban centres, sometimes the wives of the tanners maintain basket-weaving. However, basket-weaving is rarely found as an independent and a professional H.

Handicrafts in Christian Ethiopia

During the Ethiopian Middle Ages, the Christian Empire's craftsmen specialized in the service of churches and monasteries, as well as rulers and their courts. Some of the religious items were made by monks specialized in H.

In this period the "moving capitals", with their large courts and huge armies, were in need of many kinds of luxury goods made from gold or silver or from costly imported materials. The majority of artisans engaged in the production of such goods were Muslims or foreigners. The founding of the capital in ↗Gondär (1636) led to an increase in the demand for H. and a further specialization (e.g., tent-making). The greatest percentage of potters and masons, as Bruce (BruNile) reported, were the ↗Betä Ǝsraʾel. Betä Ǝsraʾel women produced pots and other clay vessels for sale in local markets. Gondär remained a principle H. centre until the early 19th cent.

Girl spinning cotton, Säqoṭa; photo 1993, courtesy of Michael Gervers

Aṣe ↗Tewodros II, wanting to modernize his army, exceeded from individual H. to manufactories. He settled European engineers and craftsmen in ↗Gafat (since 1855; ↗St. Chrischona-Pilgermission), who with the assistance of local craftsmen, manufactured carriages, cannons, gunpowder and bombs.

The status and role of craftsmen vary strongly in the different societies. The extreme poles are the northern Ethiopian empire and several ethnic groups in the south-west:

a) The north: the northern Empire with the *nəgusä nägäśt* and the nobility at the top was characterized by a social ranking system ruled by clientele relationships. There were only three occupations desirable for man: to be a farmer, a soldier, or a clergyman. Getting clients depended on land rights. Since craftsmen did not accumulate land, they were excluded from the possibility of having clients. Consequently H. were found at the bottom of the hierarchical order and were looked down upon. Blacksmiths, moreover, lived in constant danger of persecution (↗*buda*; ↗Marginalized people). Wherever possible, craft activities were shifted on to socio-politically "non-Amharic" groups like, e.g., the ↗Betä Əsraʾel.

b) The south: in southern Ethiopia the full-time craftsmen usually constitute a socially distinct group (with endogamy rules, avoidance regulations etc.) within the respective societies.

Parallel to the numerous variants between north and south regarding the socio-religious and economic importance of craftsmen, there are many hypotheses about their specific social role and their historical formation. Particularly in the publications before 1980, these views reflect ideas or clichés on the "traditional culture", which can be traced back to the value system of the "Amhara/Northerners", which began to unfurl with the northern Ethiopian expansion and which, in some areas, had gained influence as early as the Ethiopian middle ages. By viewing the craftsmen as either "respected" or "despised", scholars tried to identify "castes" or even pariah-groups. The ambivalent role of the artisan was also pointed out. Haberland (1961, passim) tried to illustrate this by the concept of *sacer*, which can mean holy as well as despicable.

Such concepts are not apt to deliver satisfying results, mainly due to their historically insufficient basis and their exclusion of the economical dimension. Similar reservations are called for, with respect to Levine, who has the craftsmen evolve within the confines of an ecological niche starting from which they would spread as guests among "host societies".

Handicrafts in Omotic speaking areas

Many of the Omotic speaking groups were traditionally hierarchically organized by the principle of divine ↗kingship. Here artisans are commonly described as being positioned at the lower end of the social hierarchy. However, there can be no talk of a severe marginalization, since nearly all of the occupational groups and indigenous officials or even the king had a close ritual and economical relationship, e.g., in former ↗Käfa, so that the concept of *sacer* is best used here. Their supernatural powers allowing them to create things, can either be dangerous or a blessing. In Käfa the close relation of the *mango* (occupational group) to the king is expressed by creation-myths and rituals. Such relations can be identified not only in other kingdoms, but also in other small Omotic groups. In northern Ethiopia, however, such a ritual relationship between ruler and craftsmen does not exist; a characteristic difference in the position of the craftsmen. The disappearance of divine kingship in Käfa and the adjustment of the Käfa-elite to the Amhara society certainly affected H. (e.g., the idea of *buda*); one consequence was that only the negative aspects of the ambivalence were left over.

Polycephalous societies in south-western Ethiopia

Most of the craftsmen in the polycephalic peasant societies of the south-west are economically in a good position. As their products are believed to be of a better quality than those of an industrial production, they are able to compete with the latter. The guild-like organization of the ↗*fulḍo* secures production and distribution in the Ethiopian south-west, and has therefore contributed to this.

The tight intertwining of H. and agriculture in economical and religious aspects is very distinctive in these societies. The mutual dependence of the peasant population and the artisans is expressed by their numerous oral traditions, which state that the first ancestors of craftsmen and farmers were created together. In Dullay, and in some other groups, the craftsman is even considered to be the first-born. According to another myth the first craftsmen lived for a time together with God, "like his dogs". In a way, these ancestors were demiurges and their descendants continue to be creative till today. Ritually craftsmen are mostly engaged in ceremonies that concern the whole country. This is also true for craftsmen among pastoralists like the Boorana.

The analysis of the ethnical groups in south-western Ethiopia shows a broad scale in the socio-economical and religious position of the craftsmen. It appears not to be helpful to use the concept of "caste" considering their special social status. The circumscription of agriculturists and craftsmen as forming distinct "collectives" (*Rollenkollektive*) with institutionalized relations between its members, is more accurate. Regarding the development of H. especially in areas of intensive agriculture, we can assume an inner social development, which, through mutual cultural exchange (either peaceful or warlike) with neighbouring ethnic groups, received some stimulation.

Hermann Amborn

Handicrafts of the Betä Ǝsra'el

From the 15th cent. onward the ↗Betä Ǝsraʾel were gradually disenfranchised and lost their right to ↗*rəst*. They supplemented their income by engaging in a variety of crafts, including smithing and weaving by the men and pottery-making by the women. Almeida reported, for example, that the Jews of Dämbəya lived "by weaving cloth and by making (zargunchos) (spears), ploughs and other iron articles, for they are great smiths" (BeckHuntAlm 54f.).

As skilled craftsmen, the Betä Ǝsraʾel developed complex ties with their Christian neighbours. They were valued for the products they produced, especially agricultural tools and weapons, but stigmatized for their involvement in despised low-caste professions. During the Gondärine period (↗Gondärine kingdom), Betä Ǝsraʾel crafstmen were also trained as carpenters and masons and benefited from imperial patronage. In the 18th and 19th cent., their situation deteriorated and they became stigmatized as a caste-like group and associated with the evil eye and ↗*buda*.

Betä Ǝsraʾel women produced pots and other clay vessels for sale in local markets. From the early 1960s onward some began to make pottery figurines for sale to tourists, especially foreign Jews who visited them. These tourist arts have been elaborated since the emigration to Israel, often focusing on their distinctive Ethiopian cultural milieau.

Steven Kaplan

Handicrafts in Harär

Arts and crafts in ↗Harär reflected the town's international trade contacts to the east. They catered to the sophisticated needs of the urban elite, the Harari ethnic group in particular. These crafts were in the hands of Harari proper or in those of skilled and respected non-Harari artisans. Trades, in contrast, catered to general household, workshop and fieldwork needs. They were in the hands of castes including ↗blacksmiths, who were men of a very low-caste Harari group; potter-women of the same caste (↗Pottery); low-class tanners and dyers of leather (↗Somali men) and leather-workers (Somali women). Craftsmen and artisans served the needs, not only of Harari customers, but also of those from other ethnic groups like the ↗Argobba, Somali, ↗Qottu and, in recent times, ↗Amhara.

Basket-weaving

Harari women are famous for basket-weaving with intricate patterns in various colours. The production and possession of such baskets was crucial in Harari society. Baskets are woven in a coil technique, and various types of local grasses served as the foundation-coil and the wrapping. In the last century natural dyes were used (soot, plants, minerals, animal feces), yet already in Paulitschke's times (1880s) imported chemical dyes were known. A tourist trade in items of a simpler make has also developed.

Bookmaking and bookbinding

According to Burton, in the 19th cent. Harär was known for strong leather bindings of the Holy ↗Qurʾān with imprinted patterns. The leather was obtained from Somali tanners; a strong piece of cowhide served as the cover, around which the fine leather of the binding was wrapped. Due to the tanning and dyeing techniques (↗Leather), the colour of the binding was usually reddish-brown; the sheen was achieved by a mixture of egg and lemon juice. Patterns were imprinted using a vice. The folios of a book were sewn together and glued into the binding by the Qurʾān-teachers themselves. The bookbinding craft is in decline today.

Jewellery

Jewellery was made from silver, sheet silver, gilded silver, sheet gold, and gold. Recently aluminium has also been introduced. "Gemstones" included the "blue stone of luck" (brought by a *ḥäǧǧī* to Mecca), corals, amber, malachite and glass. The jewellery used to be heavier in make and style than the filigree work fashionable in Addis Abäba. Necklaces of heavy hollow beads in beaten metalwork chains were manufactured, as well as headbands in various combinations, rings and bangles. Specialist craftsmen work for Harari, Qottu and Argobba, while the Somali have their own jewellers in ↗Ǧiǧǧiga, yet they also trade their products in Harär.

Textiles

In Burton's time (1854), women's garments were made of locally spun, hand-woven (Paulitschke 1888:252) and dyed cotton of a type still worn today by Argobba women. Spinning in the Harär region used to be done with the Indian-type spinning wheel. The loom was the horizontal loom common in Ethiopia. Yet even then there were garments made of natural or artificial silk imported from India, Western countries (Burton 1856:326, 338, 342), and, occasionally, China. In the 19th cent. indigo-dyed imported robes were popular (Paulitschke 1888). Factory spun yarns and woven materials have replaced the home-made ones.

Woodwork

Sophisticated woodcarving concentrates on the preparation of the writing-plates (*luḥ*) for Islamic schools, on Qurʾān racks and on the wooden water-flasks to be carried to the mosque for ablutions. Nowadays there is a water-supply within the city and such flasks are often made for tourist consumption. Geometrical decorative patterns are carved in chip-notching technique. The wooden sandals with a foot peg and high supports for the soles, which were common within the Indo-Iranian sphere (Grottanelli 1947), and the strong wooden porringers mentioned by Burton are rarely made today. A special craft developed during the second half of the 19th cent., the period of the Egyptian occupation (1875–84), when it became fashionable to have carved doors for the major entrance to the living-room, and lathe-carved banisters to the upper floor. Some Indian (Gujarati) craftsmen worked in the town. These carvings are often in high relief and have floral patterns (s. Pankhurst 1991, Wilding 1976).

Blacksmithing

Blacksmiths in Harär are called *tumtu*. As everywhere in Ethiopia, they belong to the lowest caste and are said to possess the "evil eye" (↗*Buda*). They lived in Bädrō Bäri quarter, Šañi Tōya neighbourhood ('neighbourhood of the potters'). Today, however, they work in the neighbourhood of Ḥarat Dābli Tōya. In general, they manufacture various types of tools. The materials today are often of Western origin. Bellows are still made of goatskin.

Leatherwork

Tanners and ↗leather-workers are members of the discriminated Somali Bōna caste. They used to work in a special area outside the town where a water supply was available. Special plant materials containing tannin are used for tanning and for dyeing. These also provide the reddish-brown dye for leather fixtures for baskets or for the leather cover of the basket bowl *drät*.

Pottery

Potter-women belong to a discriminated Harari caste, which also supplies the blacksmiths. They live together in special quarters in the "neighbourhood of the potters". Traditional crockery is heavy, neither polished nor burnished, almost crude, with the exception of the *aflala*, a blackened and burnished pottery container with a long-rigged neck, which serves as containers for jewellery and valuables. As materials were used a type of loam and a temper. The potter's wheel was unknown.

Ḥaniš islands

The islands of the southern Red Sea, collectively referred to as the Ḥ. (Tna. ሐኒሽ, *Ḥaniš*, Arab. الحنيش, *al-Ḥunayš*), are located between the Eritrean and Yemeni coasts, running approximately from 13° 30' N latitude to 15° 40' N latitude. There are three separate island groups: the Zuqar-Ḥanish, the southern-most, composed principally of Greater and Lesser Ḥanish, Zuqar and close to 40 other small islands and rocks; the Zubayr Group, composed of Zubayr, Centre Peak and eight smaller islands and rocks; and the single and northern-most island of Ǧabal aṭ-Ṭayr. For generations, all of the islands have served as fertile fishing-grounds for fishermen from both the African and Arabian coasts.

Prior to the end of the World War I, all of the islands were under the sovereignty of the Ottoman Empire. Although Italy annexed the adjacent African coastline in 1890 when it established its colony of Eritrea, there is little evidence of Italian activity on the Ḥ. during this period. In 1923, pursuant to the Treaty of Lausanne, the Ottomans renounced sovereignty over all territory in the Red Sea region, including the Ḥ. This was accomplished by Article 16, which also provided that the future of the islands would be "settled by the parties concerned".

The two powers most active in the region were Great Britain and Italy. While the British generally confined their activities to the eastern shore of the Red Sea, Italy engaged in a variety of acts on the islands. These included granting a concession of a fish-cannery, stationing soldiers, constructing barracks and other buildings and issuing fishing licenses. Italian competition with the British also resulted in two agreements that further solidified the indeterminacy of sovereignty over the islands: the so-called Rome Conversations of 1927 and the Treaty of 16 November 1938. Both involved commitments by the two states not to acquire additional territory in the Red Sea littoral. This treaty was soon abrogated by the outbreak of World War II.

The most significant activity in and around the islands in the post-war period grew out of the Eritrean secessionist struggle against Ethiopia. Beginning in the mid-1980s, the Republic of ↗Yemen undertook a series of actions on the Ḥ., including the erection of lighthouses. Both Ethiopia and the Yemen also granted oil-exploration concessions in blocks that encompassed and abutted the islands. But little exploration activity was conducted on the islands themselves.

In November 1995 Eritrean and Yemeni troops clashed for several days on Greater Ḥ. and several surrounding islands after Yemen began initial preparations for construction of a recreation facility on the Ḥ. Ensuing negotiations led to the drafting of an Agreement on Principles, signed by Eritrea and the Yemen on 21 May 1996, by which the two states agreed to resolve their differences peacefully through arbitration. The two states signed an arbitration agreement on 3 October 1996, providing for the creation of a five-judge *ad hoc* arbitrage tribunal.

The tribunal issued its award in the first stage on 9 October 1998 and awarded the Mohabbakah Islands, the Haycock Islands and the so-called South West Rocks to Eritrea and the remainder of the disputed islands to the Yemen. Importantly, the tribunal also held that "[i]n the exercise of its sovereignty over these islands, Yemen shall ensure that the traditional fishing regime of free access and enjoyment for the fishermen of both Eritrea and Yemen shall be preserved for the benefit of the lives and livelihoods of this poor and industrious order of men".

On 1 November 1998 Eritrea withdrew the last of its troops that had been occupying islands awarded to Yemen. The tribunal issued its award in the second stage on 17 December 1999. The islands previously awarded to the Yemen did not play a significant role in the tribunal's delimitation, as the boundary line chosen was one essentially equidistant between the opposing mainland coasts. However, the tribunal did elaborate on the nature of the traditional fishing regime recognized in the first phase. It held that "[t]here must be free access to and from the islands concerned", as well as an "entitlement to enter the relevant ports, and to sell and market the fish there". The tribunal held that these ports included the major fish marketing centres on the Yemeni coast.

Hannibal, Abraham ↗Pushkin, Alexander

Hansen-Bahia, Karl-Heinz

H. (originally Karl-Heinz Hansen; b. 19 April 1915, Hamburg, d. 14 June 1978, São Felix, Brazil) was a painter. He started working as a wood-engraver in 1946 in Hamburg and in 1949 migrated to São Paulo. After his first exhibition of wood-engravings (Museu de Arte Moderna), he moved to Salvador da Bahia, where he was to develop his own expressive style, reflecting the multicultural atmosphere of the city.

In 1959 H. returned to Germany, working as a wood-engraver at the Bavarian Castle of Tittmoning. In 1963 he was appointed Professor for

Graphic Design at the ↗Fine Arts School in Addis Abäba, where he also produced an important part of his works. In 1966 he returned to Salvador da Bahia, adopted Brazilian citizenship and changed his name.

H.'s oeuvre mainly consists of wood-engravings, a skill where he stands out as one of the most important artists of the second half of the 20th cent. As artistic motifs he preferred people in Bahia and Addis Abäba and their environment. Another focus of his interest were Christian, mythological and historical subjects. His works thus reflect his deep admiration for the cultures of Brazil and Ethiopia. Following ideas from German expressionism, he created a most original way of representation and his artistic work had a lasting influence on the development of contemporary arts in both his countries of adoption.

Ḥaqqaddīn b. Dalḥūy b. Manṣūr

Ḥ. (حق الدين بن دلحوي بن منصور; fl. before 1332) was the brother of the ↗Walašmaᶜ ruler ↗Ṣabraddīn b. Dalḥūy b. Manṣūr. Ḥ. is mentioned only in the Chronicle of ↗ᶜAmdä Ṣəyon I in a message in which the Emperor threatened Ṣabraddīn with the same punishment he had inflicted on his brother: "Do you not know what I myself formerly accomplished when your brother Ḥ. took by force one of my young servants named Təᶜəyentay? I left my soldiers at the place (called) Šägʷəra and, in two days after leaving my country, I entered into your city with seven horsemen and I slew the Moslem people through the power of God my Master, creator of Heaven and Earth. Then that part of my army [i.e. the remainder] arrived and it destroyed utterly the land which is called Ifat ... The [people of] the land of Zəga and Manzəḫ, who were united to attack me, surrounded me. But I defeated them through the strength of Jesus Christ and also their master, the son of your brother, Däradər. Him I killed; and to you I do the same." Hence, the defeat of Ḥ. and the death of Däradər must have occurred before ᶜAmdä Ṣəyon's campaign against Ṣabraddīn in 1332.

Some scholars (s. BassÉt II 128; PerrAmdS 332; HuntAmd 24) identified Ḥ. with the third Walašmaᶜ ruler, ↗Ḥaqqaddīn I b. ᶜUmar Walasmaᶜ, who is mentioned by al-↗Maqrīzī. The Arabic "lists of kings", however, show that there was a difference of three generations between Ṣabraddīn and Ḥaqqaddīn I, who was in fact Ḥ.'s great-grand-uncle (Cerulli 1931: 51; MarAmdS 55, n. 6), though the time-difference was only about 30 years. Ḥ. himself is not mentioned in the "lists" as a ruler of Ifat. That means that he could not have been a predecessor of his brother Ṣabraddīn, but only one of his governors.

Ḥaqqaddīn I b. ᶜUmar Walasmaᶜ

Ḥ. (حق الدين بن عمر ولسمع; r. ca. 1294/95–1301/02) was the third ruler of the ↗Walašmaᶜ dynasty of ↗Ifat. He succeeded his brother Baziyū b. ᶜUmar Walasmaᶜ and was followed by another brother, Ḥusayn b. ᶜUmar Walasmaᶜ. The time of his reign, ca. 1294/95–1301/02, can only be established by counting back the reigns of his followers. The sources for the history of the Walašmaᶜ dynasty ("Lists of kings"; MaqIlmam) do not mention any event during the rule of Ḥ. If, however, the estimate of 1294/95–1301/02 for his reign is right, the rebellion of *šayḫ* Abū ᶜAbdallāh Muḥammad (1299), which is known to us from another source (al-Mufaḍḍal b. Abī l-Faḍāʾil), must have happened during his rulership.

Some scholars (BassÉt II 128, PerrAmdS 332, HuntAmd 24) identified Ḥ. with ↗Ḥaqqaddīn b. Dalḥūy b. Manṣūr, who fought against ↗ᶜAmdä Ṣəyon. This is due to the fact that the former is mentioned only in Muslim sources, whilst the latter is referred to in Christian ones. However, as Cerulli has shown (Cerulli 1931:51; s. also MarAmdS 55, n. 6) the two persons are distinguished, both for chronological reasons (30 years of difference) and a difference in their fathers' names. Ḥaqqaddīn b. Dallḥūy was in reality Ḥ.'s great-grand-nephew.

Ḥaqqaddīn II b. Aḥmad Ḥarb Arᶜad

Ḥ. (حق الدين بن احمد حرب ارعد, r. 1376/77–86) was a member of the ↗Walašmaᶜ dynasty which ruled in ↗Ifat and later in ↗ᶜAdal and ↗Harär. He was the son of ↗Aḥmad Ḥarb Arᶜad b. ᶜAlī b. Ṣabraddīn, who was a governor in the Ǧäbärti region during the second rule of his father ↗ᶜAlī b. Ṣabraddīn. After his father's death, Ḥ, who was studying in Ifat, was pursued with hatred by his grandfather ᶜAlī and his uncle *mollā* Aṣfaḥ b. ᶜAlī. *Mollā* Aṣfaḥ was the most-favoured son of ᶜAlī, who wanted him and not a son of Aḥmad Ḥarb Arᶜad as his successor. Thus, ᶜAlī and *mollā* Aṣfaḥ finally drove Ḥ. out of Ifat, placing him under the supervision of a provincial governor. This governor sent Ḥ. to the villages to collect taxes. Ḥ. did not only collect taxes but also recruited people for an army. Eventually, he overthrew and killed the governor, took over his soldiers and distributed to them all the booty he got. Through this, his army expanded.

At that time *mollā* Aṣfaḥ rebelled against his father and asked *aṣe* Nəwayä Krəstos (↗Säyfä Arᶜad) for help. The Ethiopian ruler sent 30,000 soldiers. Supporting his grandfather, Ḥ. defeated the allied forces in two successive battles and killed Aṣfaḥ. With much booty, he returned to Ifat, where ᶜAlī was forced to reconcile with his now-powerful grandson. After some years, ᶜAlī had to hand over the rule of Ifat to Ḥ. The latter, however, did not stay in Ifat but proceeded to Šäwa, where he built a new capital named Waḥal. There Ḥ. resettled many people from Ifat, leaving it finally in ruins.

From his new capital in Šäwa, Ḥ. continued to fight the Ethiopian rulers up to the time of *aṣe* ↗Dawit II. He fought more than 20 battles till he died as a "martyr" in 1386, after a ten-year reign. He was succeeded by his brother ↗Saᶜdaddīn Abū l-Barakāt Muḥammad b. Aḥmad Ḥarb Arᶜad.

The main source for the story of Ḥ. is al-↗Maqrīzī (MaqIlmam²). The biography above is based on his narration, except for the dates, which are taken from the Walašmaᶜ Chronicle published by Cerulli (1931). According to al-Maqrīzī, Ḥ. ruled for ten years and died in 1374/75. Since al-Maqrīzī himself maintains that Ḥ. died while fighting *aṣe* Dawit II, the year 1386, proposed in Cerulli, is more appropriate than Taddesse Tamrat's (TadTChurch 147–51).

Ḥ.'s importance as a protagonist of ↗*ǧihād* in Ethiopia is underlined by the fact that he is one of the few Muslim rulers in Ethiopia included in ↗Ibn Ḫaldūn's work, where he is mentioned under the name Ḥaqqaddīn b. Muḥammad b. ᶜAlī b. Walaṣmaᶜ. Since the names Aḥmad and Muḥammad are often interchanged, even for the Prophet, there is no doubt about the identity.

Ḥara Dəngəl ↗Saints, local

Ḥaräg

In Ethiopian manuscript-illumination tradition, Ḥ. (ሐረግ, 'tendril') are ribbon-shaped ornaments applied to the frontispiece and incipit pages of ↗manuscripts; they divide the textual units and, by extension, are used to decorate the ↗Canon-tables, in addition to miniature frames.

Ḥ. consist of a horizontal border at the top of the page, often enriched with perpendicular bands beneath, which frame the text from the sides and divide the columns of the script. Elaborate examples are also closed at the bottom and can enhance the text in four framed compartments (Mercier 2001:65). The bands, which in some cases are more undulating and in others more angular, are filled with interlaced geometric forms and stylized organic motifs, mostly designed on a six-dot grid system (fig. 1). A common addition is the stylized palmettes, usually facing each other, which sprout from the loose ends of the bands. Initially, the ornamentation was only applied in red, but later yellow, green and blue were used. The natural colour of parchment was also included as a part of colouristic compositions.

Although the structural principles of Ḥ. design are based on symmetry and regularity in the application of particular ornamental modules, within them an unlimited number of variations are possible. Consequently, it is difficult to find two identical Ḥ.

The Ethiopian Ḥ. may have originally been adapted from models in the Mediterranean world through the transmission of manuscripts used for translations, but up to now no direct prototypes have been identified.

Judging from the manuscripts whose decoration was unfinished, the scribes responsible for the layout of the text designed the Ḥ., while the colouring was often left to the miniature painters. Any type of book could be adorned by Ḥ., but the most-elaborated decorations are found in the Psalters (e.g., ms. Addis Abäbä, IES 76, from the 15th cent. is decorated with over 170 Ḥ.). The oldest known examples of Ḥ. date to the second half of the 14th cent. At that time, ornaments were enriched with geometrized interlaces, palmettes and crosses. The predominant colours were yellows and reds, with the addition of greens and blues enclosed in black outlines to increase the colouristic value of the composition. In the 15th cent. the same repertory of motifs is applied, but the colours used are yellows, reds and greys with the neutral parchment as a background. Ḥ. originating from scriptoria of the ↗Stephanites, from the 15th/16th cent., additionally use the classical interlace of geometrical and pseudo-architectural forms, which are always vividly painted and outlined with black lines (↗Gundä Gunde). The decoration itself often occupies as much space as the ornamented text and knotted and suspended drapery is also added to the repertory of motifs (Zanotti 1993; Mercier 2001:87).

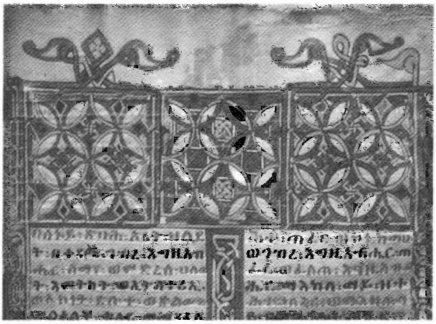

Fig. 1. Ms. Genesis, fol. 18r, 15th/16th cent.; Saʿəsi, Mayraza, Täklä Haymanot church; photo 2004, courtesy of Michael Gervers

In the 17th cent. a particularly rich Ḥ., which occupies more space than the text, shows in a group of manuscripts originating from ↗Lasta. It is composed of a large frame with a cross-band dividing the text into four sections, each filled with stiff geometric patterns more akin to carpet designs (e.g., London, BritLib Orient. 516). The 17th cent. also saw a transition to a different type of ornament. During this period, Ḥ were limited to a horizontal upper band filled with simplified geometrical forms, often painted only in black and red (AfrZion 64). At the end of the 18th cent., the filler ornamentation becomes organic and is mostly composed of garlands. Ḥ. from the late 19th and the 20th cent. present an eclectic mixture

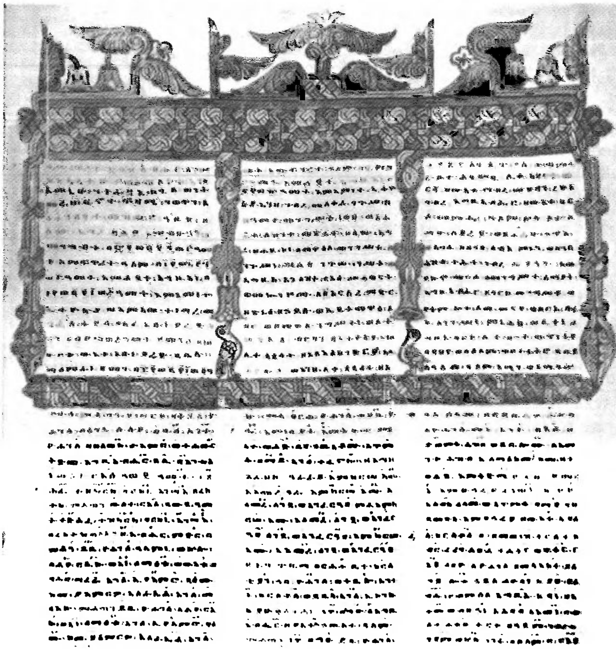

Fig. 2. *Dəggʷa*, fol. 7r, 19th cent., Hawzen Täklä Haymanot church; photo 2004, courtesy of Michael Gervers

of elements from the previous periods, e.g., classical interlace is added to floral motifs, and the inclusion of all colours, even those atypical of Ethiopian art, such as pink and purple (fig. 2). Anthropomorphic and zoomorphic elements are particularly common in manuscripts originating from the scriptoria in ↗Šäwa, probably due to the influence of the decoration from ↗magic scrolls.

Ḥarägot Abbay

Däǧǧazmač Ḥ.A. (ሐረጎት፡ አባይ; b. 7 May 1909, Asmära, d. 1974, Addis Abäba) was an entrepreneur and politician. A son of *baḥər nägaš* ↗Abbay Habtä Ṣəyon, Ḥ.A. belonged to the *gäza Asmaᶜ* ('house of Asmaᶜ', also known as *hadamu* ↗*Asmära*), one of the four "houses" that constituted the Arbaᶜətä Asmära neighbourhood league reportedly formed back in 1508 (Yəsḥaq Yosef 1993:13f.; Mäsmay Gäbrähəwät 2002:131). According to oral tradition, *gäza Asmaᶜ* was also related to the ↗Asaorta (Mikaʾel Hasama Raka 1986:70; interview with Yämanä Gərmaṣəyon, 2004).

Ḥ.A.'s father died in 1914 and the boy was sent to ↗Mändäfära, where he attended the elementary school of San Giorgio. After finishing the four-grade school system devised for the locals (*indigeni*) by the colonial government (↗Africa Orientale Italiana), in 1924 he entered the service of the Italian administration as a clerk in the army headquarters (Comando Truppe) in Asmära. On 1 February 1938 he was promoted to a lower-court judge, until he terminated his employment on the very eve of the British occupation of Asmära on 31 March 1941 (ErDizBio 161).

Thereafter, Ḥ.A. set up a flour-mill business. With the capital he made, in July 1951 he bought, together with his partner *azmač* Kənfu Kidane, a businessman from Aksum, the Eritrean branch of Salvati Africa – an urban and inter-urban bus service founded by Italians in 1938. Officially renamed *Maḫbär Awtobus Asmära* 'Asmära Bus Company', by 1974 the company held a near monopoly in the town. With the coming of the *Därg* (↗Provisional Military Administrative Council) it was, like all other transport companies, put under state control. Ḥ.A.'s family was denied any access to the profit.

Ḥ.A. also offered voluntary service to the ↗Ǝnda Maryam church of Asmära. Around 1944, while he was its ↗*gäbäz*, a one-km-long wall was built around the church and a modern school was established within the church compound.

Ḥ.A. was one of the founders of the ↗*Maḫbär fəqri hagär*. From 1941 to 1946, he was its first general secretary. In 1946-48, when the *Maḫbär* started to advocate the union between Eritrea and Ethiopia, he was the vice-president of its Asmära and ↗Ḥamasen branches. In 1952, when the ↗Ethiopian–Eritrean Federation was implemented, Ḥ.A. was elected member of the Eritrean Assembly from the ↗Däqqi Täššəm constituency in Ḥamasen. On 24 November 1952 he resigned to assume an administrative post in the autonomous government of Eritrea under *däǧǧazmač* ↗Tädla Bayru as Chief Executive and became, on 23 January 1954, Secretary of the newly created Department of Law and Justice (Eritrean Assembly, *Minutes* n. 261).

When Tädla Bayru resigned, Ḥ.A. was the only one to challenge *fitawrari* ↗Asfəḥa Wäldä Mikaʾel, *aṣe* Ḥaylä Śəllase I's vice-representative in Eritrea, in the race for the office. The Emperor instructed ↗Andargaččäw Mäsay, his representative and son-in-law, to ensure that Asfəḥa becomes head of the Eritrean government. Andargaččäw ordered Ḥ.A. to his office and told him to withdraw his candidacy in favour of Asfəḥa, but Ḥ.A. declined to consent (Zäwde Rätta 2000: 452). Ḥ.A. did not win the election, yet Asfəḥa got only 48 of the 68 votes.

The new Chief Executive took measures against those members of the assembly who had supported Ḥ.A., namely *baššay* Bäʾəmnät Täsämma and *šayḫ* Muḥammad ʿUmar Akito. The first "failed" in the 1956 election, whilst the latter refused his seat in the Eritrean Assembly even after the Supreme Court decided in his favour (Supreme Court of Eritrea, Sentence no. 7, CRON 1289).

Ḥ.A.'s political career came to a halt and he turned to running his transport company for the remaining time of the Federation. Later, he was "rehabilitated", given the honorific title of *däǧǧazmač* and, in 1963, he was appointed ↗*käntiba* of Asmära by the Emperor, becoming the second Eritrean mayor in the history of the town. Remembered as a good administrator, during his tenure (1963–74) he presided over a number of projects. E.g, the May Bəla sewage works was completed (long after the work was begun by the Italians). The slums of Abbašawil, Gäza Bərhanu and Gäza Banda, where the local people were segregated during the Italian and British rule, were reconstructed in accordance with the modern city planning. Another achievement was the construction of the football stadium, named after the legendary Queen of Sheba.

Ḥ.A.'s son, Śəyyum Ḥarägot, took a Doctorate in Law at Harvard University and from 1957 worked as legal advisor for the Ministry of Foreign Affairs. He rose to become head of the office of the Prime Minister and was a member of the Ethiopian cabinet in 1966–74.

In mid-July 1974 Ḥ.A. was arrested by the *Därg* and taken to Addis Abäba, where he died in prison. Śəyyum was incarcerated the same year, but released in 1982 (KilHDic 246). After the fall of the *Därg*, Ḥ.A.'s remains were brought home and reburied in the Ǝnda Maryam cemetery on 19 January 1992.

Ḥarägot Abbay

Däǧǧazmač Ḥ.A. (**ሐረጎት፡ አባይ**; b. 7 May 1909, Asmära, d. 1974, Addis Abäba) was an entrepreneur and politician. A son of *baḥər nägaš* ↗Abbay Habtä Ṣəyon, Ḥ.A. belonged to the *gäza Asmaᶜ* ('house of Asmaᶜ', also known as *hadamu ↗Asmära*), one of the four "houses" that constituted the Arbaᶜətä Asmära neighbourhood league reportedly formed back in 1508 (Yəsḥaq Yosef 1993:13f.; Mäsmay Gäbrähəwät 2002:131). According to oral tradition, *gäza Asmaᶜ* was also related to the ↗Asaorta (Mikaᵓel Hasama Raka 1986:70; interview with Yämanä Gərmaṣəyon, 2004).

Ḥ.A.'s father died in 1914 and the boy was sent to ↗Mändäfära, where he attended the elementary school of San Giorgio. After finishing the four-grade school system devised for the locals (*indigeni*) by the colonial government (↗Africa Orientale Italiana), in 1924 he entered the service of the Italian administration as a clerk in the army headquarters (Comando Truppe) in Asmära. On 1 February 1938 he was promoted to a lower-court judge, until he terminated his employment on the very eve of the British occupation of Asmära on 31 March 1941 (ErDizBio 161).

Thereafter, Ḥ.A. set up a flour-mill business. With the capital he made, in July 1951 he bought, together with his partner *azmač* Kənfu Kidane, a businessman from Aksum, the Eritrean branch of Salvati Africa – an urban and inter-urban bus service founded by Italians in 1938. Officially renamed *Maḫbär Awtobus Asmära* 'Asmära Bus Company', by 1974 the company held a near monopoly in the town. With the coming of the *Därg* (↗Provisional Military Administrative Council) it was, like all other transport companies, put under state control. Ḥ.A.'s family was denied any access to the profit.

Ḥ.A. also offered voluntary service to the ↗Ǝnda Maryam church of Asmära. Around 1944, while he was its ↗*gäbäz*, a one-km-long wall was built around the church and a modern school was established within the church compound.

Ḥ.A. was one of the founders of the ↗*Maḫbär fəqri hagär*. From 1941 to 1946, he was its first general secretary. In 1946-48, when the *Maḫbär* started to advocate the union between Eritrea and Ethiopia, he was the vice-president of its Asmära and ↗Ḥamasen branches. In 1952, when the ↗Ethiopian–Eritrean Federation was implemented, Ḥ.A. was elected member of the Eritrean Assembly from the ↗Däqqi Täššəm constituency in Ḥamasen. On 24 November 1952 he resigned to assume an administrative post in the autonomous government of Eritrea under *däǧǧazmač* ↗Tädla Bayru as Chief Executive and became, on 23 January 1954, Secretary of the newly created Department of Law and Justice (Eritrean Assembly, *Minutes* n. 261).

When Tädla Bayru resigned, Ḥ.A. was the only one to challenge *fitawrari* ↗Asfəḥa Wäldä Mikaʾel, *aṣe* Ḥaylä Śəllase I's vice-representative in Eritrea, in the race for the office. The Emperor instructed ↗Andargaččäw Mäsay, his representative and son-in-law, to ensure that Asfəḥa becomes head of the Eritrean government. Andargaččäw ordered Ḥ.A. to his office and told him to withdraw his candidacy in favour of Asfəḥa, but Ḥ.A. declined to consent (Zäwde Rätta 2000: 452). Ḥ.A. did not win the election, yet Asfəḥa got only 48 of the 68 votes.

The new Chief Executive took measures against those members of the assembly who had supported Ḥ.A., namely *baššay* Bäʾəmnät Täsämma and *šayḫ* Muḥammad ʿUmar Akito. The first "failed" in the 1956 election, whilst the latter refused his seat in the Eritrean Assembly even after the Supreme Court decided in his favour (Supreme Court of Eritrea, Sentence no. 7, CRON 1289).

Ḥ.A.'s political career came to a halt and he turned to running his transport company for the remaining time of the Federation. Later, he was "rehabilitated", given the honorific title of *däǧǧazmač* and, in 1963, he was appointed ↗*käntiba* of Asmära by the Emperor, becoming the second Eritrean mayor in the history of the town. Remembered as a good administrator, during his tenure (1963–74) he presided over a number of projects. E.g, the May Bəla sewage works was completed (long after the work was begun by the Italians). The slums of Abbašawil, Gäza Bərhanu and Gäza Banda, where the local people were segregated during the Italian and British rule, were reconstructed in accordance with the modern city planning. Kebre-Ab Tesfaí

Harär

Introduction

H. (ሃረር, also ሐረር; Arab.: هرر; in European sources: Harar, Harer, Harràr etc.), one of the oldest Muslim cities of East Africa, is located 525 km east of ↗Addis Abäba (9°19'N, 42°07E) at an average elevation of 1,750 m A.S.L. (s. map for ↗Harärge). The inhabitants call the old city of H. *Gēy* , i. e., 'the City' (cp. ↗*Ge*).

The former capital of the historical emirate on the crossing of important trade-routes, later the capital of the ↗Harärge province, today H. is the capital and administrative seat of the Harari National Regional State. According to the 1994 census, the population of the town was 76,378 (CSA 1999a:6). The latest estimates show that approximately 21,000 persons live in the 60ha of the old H. city encompassed by the wall (*ǧugal*; s. map Gori – Bianchini et al. 2003). The newer area of the city, with administrative buildings, multi-storied shopping centres, and residential quarters, lies to the west of the old H. Throughout the city, housing units are mostly permanent, non-storied buildings, which often have multiple-attached units. Corrugated iron sheets cover most roofs, while the majority of homes still have traditional earthen floors (CSA 1999a:170, 172). Transport connection between H. and Addis Abäba became efficient with the completion of a road in 2003. H. is also connected to the capital city and ↗Djibouti via railway (↗Railways) and airport in ↗Dərre Dawa.

H. is a regional education centre. There are 24 urban primary schools, and four secondary schools near the town (Harari Regional Bureau of Education 2004). The dense concentration of educational facilities – formal and non-formal, religious and secular – has established the Harari region's position as theone with the second highest urban literate population in Ethiopia (CSA 1999b:85).

In H., persons of ethnic Amhara, Oromo, Harari, Gurage or Somali backgrounds and different cultures coexist with a relatively high degree of religious tolerance. The daily interactions between ethnic groups take place especially in areas of commerce and devotional activities. In 2002–03, H. was rewarded for its comity when it received the UNESCO Cities for Peace Prize for urban harmony.

H. inhabitants' occupational distribution is heavily mercantile, with trade in manufactured textiles, imported trinkets and clothing. Many residents rely on small cottage industries for their household earnings. Agricultural activity takes place some distance from the city. Large-scale commodity production of the region's famous Mocha ↗coffee has suffered with the collapse of the world coffee prices (s. OXFAM 2003); the economic base of area farmers has been dramatically changed, since many of them have opted to replace their coffee trees with the lucrative ↗*čat* plant.

The tourist market has recently expanded, influencing local economic activities. Tourism has increased the local sales of handicrafts and cultural items to the extent that the export of antique Harari basketry and manuscripts is now prohibited. Apart from numerous traditional sites in the old H., the city's major tourist attractions include the former residence of ↗Ḫaylä Śəllase I, a museum dedicated to the French poet Arthur ↗Rimbaud, the H. Beer factory, and the ritual of ↗hyena feeding. Over the last three decades, some efforts were made to preserve the H. cultural heritage; both the regional government and private citizens have created several local museums. However, despite the rise of the tourism, the overall prosperity and welfare of the city remains constrained by the privation of adequate potable water resources. The challenge of imminent concern to the city is to overcome issues of sanitation that result from severe water deficiency.

Belle Asante

Harär city structure and main buildings

The traditional city of H. comprises of only a clearly defined area of 1.6 km². It is surrounded by a ca. 4.5-metres-high wall (*ǧugal*), built by Nūr b. Muǧāhid (r. 1551/52-68). The wall has five old gates (*bari*, pl. *bariyāč*): Assum Bari (Amh. Fällana Bärr; Arab. Bāb al-Futūḥ) in the north; Argob Bari (Amh. Yärrär Bärr; Arab. Bāb ar-Raḥma) in the east; Saquṭaṭ Bari (Amh. Sänga Bärr; Arab. Bāb as-Salām) in the south-east; Badri Bari (Amh. Buda Bärr; Arab. Bāb al-Ḥākim) in the south; Asmäddīn Bari (Amh. Šäwa Bärr; Arab. Bāb at-Turk or Bāb an-Naṣr) in the south-west (CerIslam 321–27). The Arabic names were given after the Egyptian conquest of H., and the Amharic ones after its incorporation into the Ethiopian empire.

The town is divided into five quarters, adjacent to the gates (*bari*, pl. *bariyāč*) and also bearing the latters' names. In former times each quarter (also called *bari*) was administrated by a *malāq*. The *bariyāč* were not only administrative units; they also played a role in popular culture, e.g. in the combatant sport *agri-agri* (*agri* 'shield') where the Qurʾānic schools of the different *bariyāč* fought against each other.

Each *bari* is in turn divided into neighbourhoods (*tōya*, pl. *tōyāč*). It seems that the number and the names of the *tōyač* have been subject to changes in the course of time. Waldron (1974: 93–97) listed 59 *tōyāč*, while Gibb (1996:192–97), some 20 years later, listed 103 *tōyāč*. 23 of Waldron's list and 38 of Gibb's are named after a saint (↗*Āw*, pl. *āwāč*; Arab. *walī*, pl. *awliyāʾ*), whose shrine is located inside the *tōya*, others after mosques, markets, streets, shops etc. Every

Market place in front of the ᶜAlī Hamdūn (the so-called "Italian") mosque, built during the Italian occupation (s. map no. 9); photo 1950s, by Hans Helfritz

tōya is composed of several household compounds (*abād/abāt*, pl. *abādāč*) with the typical Harari architecture (Gibb 1996:75ff.).

In addition to the division into *bariyāč*, there exists another division of the town into "seven circles [*širti*] of holiness", the inner circle around the square of Faraz Magāla (lit. 'Horse Market') being the holiest one. The holiness tends gradually to lessen towards the seventh circle which surrounds the wall from outside. Each circle is "reigned over" by a saint (*āw*), the chief of the other saints who have their shrines inside the *širti* (Gibb 1999:101ff. with map).

Before the Amharic conquest, the Friday mosque of the town was located just east of the main place, the Faraz Magāla. It was constructed by the *amīr* Aḥmad b. Abī Bakr b. ᶜAbdallāh in 1771/62, but destroyed by *ras* ↗Makʷännən Wäldä Mikaᵓel, who replaced it in 1888 with the octagonal orthodox Mädḫane ᶜAläm church, designed by the Italian engineer Luigi ↗Robecchi Bricchetti. On the Faraz Magāla *ras* Mäkʷännən built a fountain which enabled the inhabitants to fetch water inside the wall. Before, the women had to do this from the small rivulets outside the city. Because of the fountain the Italians renamed the Faraz Magāla Piazza della Fontana.

Since the Muslims had lost their main mosque, the mosque located between Assum Bari and Argob Bari became the new mosque for Friday prayers (Ǧuma; Arab.: Ǧāmiᶜ Harar). It is associated with the name of the *ṣāḥib al-fatḥ* ('the conqueror') *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ), although the most probable date of its construction is 1560. It has two minarets one of which, according to a legend, was destroyed twice by the Christans and then stood up again by itself (CerIslam 324f.). Beside the Ǧāmiᶜ Harar, the city owns about a hundred other ↗mosques, most of them consisting only of a small room with a prayer niche (*miḥrāb*) and sometimes of an outside staircase minaret (Horton 1994:196f.; lists of mosques Foucher 1988; Gibb 1996:196ff.; Gori – Bianchini et al. 2003). In 1990s, more than 200 shrines and holy sites of the saints were recorded in the city (Gibb 1999: 94), which greatly vary in their shape: from trees, rocks, small niches in the walls of the houses or mosques to big domed structures like the schrine of ↗Abādir ᶜUmar ar-Riḍā. The number of traditional H. ↗houses (*gārāč*) – many of them of significant artistic and cultural value – has been recently estimated at ca. 2,000.

Between 1890 and 1900 *ras* Mäkʷannən had his palace built east of the church of Mädḫane ᶜAläm (s. Guida 448). It got ruined during the 20th cent. and it is now partly reconstructed. During *ras* Makwännen's time the so called Arthur Rimbaud House was also built, though only after the time of Rimbaud. Having been repaired by the French, it now contains a small museum and a library.

A second market, the Gidīr Magāla ('Big Market') is located in the middle of the town where four of the *bariyāč* meet (the Italians built there in 1937 some market halls and renamed it Mercato Nuovo). During the first half of the 20th cent. the Ethiopian government pulled down the wall in the west where the road from ↗Dərre Dawa reaches the town, and built a sixth gate, the Dūk Bari (after the Duke of Harär; Ital. Porta del Governo, today Harar Bari). The main street of H. (Amh. Andäñña Mängäd; Ital. Via di Piazza della Fontana, today Amīr Ūga) connected this gate with the Faraz Magāla. Big shops have been estabilished there; the Faraz Magāla became the main station for buses and taxis.

During the occupation, the Italians left the *città indigena* almost untouched. They had the intention to build an Italian town south of the walled city. However, their *piano regolatore*, drafted by the engineer Guido Ferrazza, never came true; only a few buildings were erected before the Italians left H. During the last decades, H. expanded a lot outside the wall, especially in the direction to Dərre Dawa and on the slopes of Mount Ḥākim, south-west from the old city.

Ewald Wagner

Harär history till 1875

The main sources for the early history of H. are of internal origin: the highly legendary ↗*Fatḥ Madīnat Harar* of Yaḥyā b. Naṣrallāh (Paret in PICES 4; WagFath), some genealogies (Wagner 1974b) and lists of the town's rulers (Wagner 1976). The only external reference to the existence of the town can be found in the Chronicle of ↗ᶜAmdä Ṣəyon's campaign against the Muslims in 1332 (MarAmdS 104f.): H. sent three "governors" (*mäkʷännən*) to assist in the insurrection of the *qāḍī* ↗Ṣāliḥ. That means that H. must have had some importance already in the first half of the 14th cent., and this, at least, makes the dates of the *Fatḥ*, which places the foundation of the town through the national saint ↗Abādir ᶜUmar ar-Riḍā into the 13th cent., not improbable. The genealogies confirm this date and the lists of *amīrs*, which contradict each other, can be conjectured in a way that fit into this dating.

According to the *Fatḥ*, Abādir together with 405 other saints came in 1216 from Mecca to H., where his leadership was acknowledged by the surrounding tribes. In the following years he fought several wars against the "Portuguese" (Būrtuqis) and the "Italians" (Ṭālyān), which in reality might have been Persian (Šīrāzī) settlers who came to Somalia at the end of the 12th cent. In 1234/35 Abādir went back to ↗Mecca where he stayed till 1279. In the meantime several saints ruled over H. Most of them died fighting the "Portuguese". Coming back from Mecca, Abādir continued to fight the "Portuguese" until his final victory in 1301.

Except for the mentioned assistance to the *qāḍī* Ṣāliḥ in 1332, we know nothing about the history of H. for more than 200 years. It seems that the region became part of the ↗Walašmaᶜ sultanate, since after their return from Yemen about 1415 the Walašmaᶜ rulers transferred their political centre from Ifat to ↗ᶜAdal where ↗Dakar (near the modern Fiyambiro, about 40 miles north-east of H.) became the residence of the Walašmaᶜ *sulṭān* ↗Aḥmad Badlāy (MaqIlmam^2 20). With the move they perhaps expected that ᶜAdal would be less exposed to Christian attacks. However, this proved a fallacious hope and in 1479 Dakar was destroyed by *aṣe* ↗Əskənder (PerrEsk 342 [text] = 357 [tr.]).

In 1520, after his victory over the leader of the religious faction Aboñ b. Adaš, the *sulṭān* ↗Abū Bakr b. Muḥammad b. Āzar made H. his capital (Cerulli 1931:42 [text] = 50 [tr.]). Beside the destruction of the former capital, Abū Bakr could have also tried to keep a tighter rein on the religious faction by having the centre of Islam under his close control. However, the strategy did not work out. Although the clergy of the town tried to mediate, the new religious leader, the *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ), strengthened by his victories over the Christians, got the upper hand in his fights with Abū Bakr and in 1525 killed him (BassHist I, 3–16 [text] = II, 9–33 [tr.]). Aḥmad Grañ installed ↗ᶜUmardīn Muḥammad b. Aẓharaddīn from another line of

One of the gates of Harär, early 20th cent.; photo courtesy of Peter the Great Museum of Anthropology and Ethnography, St. Petersburg (I 349–461) the Walašmaᶜ family as his puppet *sulṭān* and made H. the centre of his various campaigns which destroyed large parts of Christian Ethiopia.

After Grañ's defeat and death in 1543, his dispersed troops fled back to the region of H. From there, Grañ's nephew, ↗Nūr b. Muǧāhid, tried to reorganize the holy war (↗*Ǧihād*). However, he could not get hold of the town proper, where the *sulṭān* might have been glad to have gotten rid of his master from the religious faction. About 1550 *aṣe* ↗Gälawdewos conquered H. and deposed the *sulṭān* (ConzGal 42f. [text] = 146f. [tr.]). It seems that Gälawdewos did not establish a direct rule in the town, but only installed a new *sulṭān* from another line of the Walašmaᶜ dynasty (Wagner 1991:383). At any rate, when Nūr b. Muǧāhid entered H. in 1551/52, he had to kill a ruling *sulṭān* – according to the legendary "History of Nūr b. Muǧāhid and *aṣe* Zärᵓa Yaᶜəqob" (Getatchew Haile – Wagner 1989:47 [Arab. text] = 57 [tr.]). Since the sources (Paulitschke 1888:513, 515; BassHist 5 [text] = 8 [tr.]; Cerulli 1931:51f.; cf. also Wagner 1991:381f.) mention three further Walašmaᶜ *sulṭāns*, who were sons of ᶜUmardīn and ruled between 1552 and 1559, Nūr b. Muǧāhid must have installed a new puppet *sulṭān* of his choice, after having killed the one appointed by Gälawdewos. Thus, the double rule in H. ended only in 1559 when Gälawdewos's general ↗Ḥamälmal killed the last *sulṭān* Ḥabīb (Cerulli 1931:89–92).

To defend H. not only against the Christians but also against the Oromo who in the middle of the 16th cent. intruded Harärge, Nūr b. Muǧāhid had built the famous wall (*ǧugal*) around the town. The wall proved a successful bulwark against the Oromo who devastated only the lands around the town and forced Nūr b. Muǧāhid to fight them several times. However, it did not prevent the second conquest of H. by Ḥamälmal in 1559. Yet the Christian success was a short lived one. In the same year Nūr b. Muǧāhid assembled a new army and defeated Gälawdewos in ↗Fäṭägar. The Emperor was killed and Nūr b. Muǧāhid brought his head to H. in triumph (ConzGal 101f. [text] = 178f. [tr.]; Cerulli 1931:52 [text] = 56 [tr.]).

In the following years H. suffered from two severe famines due to the devastation produced by the ↗Oromo. The second was followed by a plague during which Nūr b. Muǧāhid died, in 1568, three months on his return from a campaign against the Oromo (Cerulli 1931:52f.; 56ff. [tr.]).

After the death of Nūr b. Muǧāhid, as a result of inner conflicts and the pressure of the Oromo, the rule in H. changed several times. Not only descendants of Nūr b. Muǧāhid and Aḥmad Grañ occupied the throne, but also slaves and sons of *wazīrs*. Nūr was followed by his Abyssinian slave ↗ᶜUṯmān b. Badlāy (Cerulli 1931:53f. [text] = 58f. [tr.]), who soon came into conflict with the religious faction because he did not strictly observe the precepts of the ↗*šarīᶜa* (e.g., allowing alcoholic drinks) and had made an agreement with the pagan Oromo granting them several privileges. Religious opposition was headed by *gärad* ↗Ǧibrīl, who incited an insurrection in ↗Awsa and ↗Zaylaᶜ. ᶜUṯmān successfully fought and killed him in 1569. However, while he was still in field, the clerics (*ᶜulamāᵓ*) of H. installed Ṭalḥa b. ᶜAbbās b. Aboñ, a grand nephew of Aḥmad Grañ, as new ruler of the town. But since Ṭalḥa did not wage a *ǧihād*, he was deposed in 1571 and a son of ᶜUṯmān b. Badlāy, ↗Naṣīr, became the new *sulṭān*. At his death in 1573, he was followed by his son ↗Muḥammad b. Naṣīr b. ᶜUṯmān (Cerulli 1931:54 [text] = 60 [tr.]). As a result, the rule of H. went back to the secular party.

Muḥammad b. Naṣīr was the first – as well as the last – ruler of H., after Nūr b. Muǧāhid, to fight the Christians: he led an unsuccessful campaign against *aṣe* ↗Śärṣä Dəngəl. After an undecided battle in 1576–77 (the first year fits better to the following events), he was betrayed by his own officers who delivered him to Śärṣa Dəngəl. The Emperor had him killed, together with other H. officers (CRHist 48–51 [text] = 56–60 [tr.]; DombrChr 49f. [text] = 183f. [tr.]; Cerulli 1931:54 [text] = 60f. [tr.]).

Meanwhile H. was besieged by the Oromo. Since Muḥammad's brother, the *wazīr* Ḥāmid b. Naṣīr b. ᶜUṯmān, was not able to resist them, a certain ↗Manṣūr b. Muḥammad b. Ayyūb organized the defence of the town. After having regained control over the Oromo, he turned against the governor of Awsa, who seemed to have used Muḥammad b. Naṣir's death to make himself independent. However, while marching against other places to subdue them, Manṣūr was attacked by his own soldiers. A member of Grañ's family, ↗Muḥammad Gāsā I, took advantage of the situation and in September 1576 declared himself *imām*, using again the religious title (Cerulli 1931:54f. [text] = 61f. [tr.]).

Muḥammad Gāsā I transferred the capital of the imamate to Awsa because H. was a menaced by the Oromo. H. was, from then on, governed by a *wazīr*. The first was Muḥammad Gāsā's brother, ↗Muḥammad Gāsā II, who later in 1584 became *imām* in Awsa. In the following year, under the new *wazīr* Saᶜdaddīn, H. still played some role in the conflict between Muḥammad Gāsā II and his minister ᶜAbbās b. Muḥammad (Cerulli 1931:71 [text] = 75f. [tr.]; Wagner 1979:664f.). From then on till the establishment of the ↗ᶜAlī b. Dāʾūd dynasty in 1647, we know nothing about the history of H., except some names: Ṣabraddīn b. Ādam (before 1620–24/25; Cerulli 1931:89, 92 [text] = 93f. [tr.]); Ṣadīq (1632–46) and his son *malāq* Ādam who governed the town for eleven months, and, finally, Aḥmad b. *al-wazīr* Abrām whose rule lasted ten days only (Cerulli 1942:4ff.).

In 1647 ↗ᶜAlī b. Dāʾūd, who previously had held different posts, took power. He was the founder of a dynasty under whose rule H. regained an independence lasting until the Egyptian occupation in 1875. Though the list of the ᶜAlī b. Dāʾūd dynasty exists in many manuscripts and was published several times (last editions Cerulli 1942 = CerIslam 365–81; Tedeschi in PICES 4), little more than the names are known till the 19th cent., when European sources start providing information.

During the following two centuries, the principal problem in H. continued to be the defence of the town and its hinterlands against attacks and devastation caused by the Oromo. In 1662 ᶜAlī b. Dāʾūd had to repulse the Illamo Oromo who had attacked the Asmāddīn Gate of the town. ᶜAlī's son, Ṣabraddīn, lost his life in that battle (Cerulli 1931:95f.).

Through an extensive marriage policy, however, the *amīrs* tried to make friends with the Oromo. About ᶜAlī's son ᶜAbdallāh we know specifically that at least five of his sons had different mothers from different Oromo tribes (Cerulli 1942: 2ff.; Pankhurst 1997:210). Together with this, other factors might have helped to protect the town from invasion: the wall; the advantages the Oromo acquired in having within their area an economic centre with far reaching trade connections; and the religious and cultural prestige H. enjoyed even in the pagan environment.

The economic and, at some moments, the political influence of the emirate of H. extended from ↗Aləyyu Amba in the west to Zaylaᶜ with its overseas connection, in the east. In times of peace the Oromo could buy imported goods at the markets of the town.

The importance of H. as a religious centre even in the 17th cent. is attested by the visit of two *šarīfs* (descendants of the prophet) from Mecca in 1621 (Cerulli 1931:92ff.). There is also evidence of the *amīrs* of the ᶜAlī b. Dāʾūd dynasty maintaining the religious reputation of the town. In 1761/62 Aḥmad b. Abī Bakr b. ᶜAbdallāh built the minaret of the grand mosque (CerStud I, 51ff.) and ᶜAbdaššakūr b. Yūsuf (1783–94) built a mosque in ↗Šayḫ Ḥusayn in ↗Bale, dedicated to the famous mystic ᶜAbdalqādir al-Ǧīlānī (Cerulli 1936:44). He also reintroduced the register (*siǧill*) and the chancery (*dīwān*) in the town, which strengthened the influence of the clergy, especially the *qāḍī* (Wagner 1974a:216–19).

The 19th cent. started with the fraternal conflict between ↗ᶜAbdarraḥmān b. Muḥammad and ↗ᶜAbdalkarīm b. Muḥammad, which gave the Oromo the opportunity to interfere in H. politics. In 1825 the Oromo imprisoned ᶜAbdarraḥmān for some time. Later ᶜAbdarraḥmān had to flee to the Somali tribe of the Bersub, marking also the start of Somali involvement in H. affairs. Somali influence increased when ↗Abū Bakr b. *aftal-garād* ᶜAbdalmannān b. Muḥammad got married to *gisti* ↗Fāṭima bint Kawšan, the sister of ↗Ādam b. Kawšan, head of the Garri Somali. She played an important role in politics, especially in her quality as queen dowager during the reign of her weak son ↗Aḥmad b. Abī Bakr (1852–56). The learned Ǧāmiʾ al-Bartarī, an interlocutor of ↗Burton in 1855, was also of Somali stock (from the Bartäri tribe near Ǧiǧǧiga). As adviser of the *amīr*, he was often sent for diplomatic missions to different tribes (Burton 1894:2, 33f.).

Up to the 1840s the balance between Somali and Oromo influence permitted H. to lead quite a successful policy. H. merchants extended their traffic to the markets of Šäwa, and Abū Bakr b. ᶜAbdalmannān even tried to invite the French traveller ↗Rochet d'Hericourt to H. However, at the end of Abū Bakr's reign in 1852 – perhaps as a result of a drought – the Oromo attacked and devastated the territory of H. To save the town Abū Bakr had to pay tribute to the Oromo (Caulk 1977:377). This led to an economic crisis and in 1849, 1862 and 1868 the H. currency had to be devaluated (Abdurahman Yahya Garad 1990: 232–46). During Aḥmad b. Abī Bakr's time the Oromo laid once more siege, for 18 months, to H., which was only ended after the Oromo got new privileges: from then on they were allowed to enter the town with spears (Caulk 1977:377f.).

When Aḥmad b. Abī Bakr died in 1856 without adult issues, a remote relative of his, ↗Muḥammad b. ᶜAlī b. ᶜAbdaššakūr succeeded with the help of the Oromo, which by then had so many privileges that a special tax, the *maḥallaq al-Gāllā*, had to be levied. At the same time the *amīr* monopolized the trade with several goods to fill his treasury (Mohammed Moktar 1876:393ff.). As a result, the economic situation of the population dramatically deteriorated and when the Egyptians occupied H. in 1875 the town was in total decline.

List of the rulers of H.

A. Early rulers (saints) according to the *Fatḫ Madīnat Harar* (WagFath 136):

Abādir ᶜUmar ar-Riḍā (1216–34/35)
ᶜUmardīn, brother of Abādir (1234/35–51)
Walī Nāṣir I Abrām (1251–53)
Faqīh Naṣrawī (1253)
Walī Nāṣir II Ǧamāladdīn (1253)
↗Barḫadle Yūsuf al-Akwān (1253–79?)
Abādir ᶜUmar ar-Riḍā, second rule, perhaps together with Barḫadle (1279–1301?, last date mentioned in the *Fatḫ*)

B. Walašmaᶜ *sulṭāns* ruling H. (according to Cerulli 1943, folder = CerIslam, folder after p. 268, and the reconstruction of Wagner 1991:386):

Abū Bakr b. Muḥammad b. Āzar (1520–25)
ᶜUmardīn b. Muḥammad b. Aẓharaddīn (1525–50)
Muḥammad b. Abī Bakr b. Muḥammad b. Āzar (1550–51/52)
ᶜAli b. ᶜUmardīn b. Muḥammad b. Aẓharaddīn (1552–55)
Barakāt b. ᶜUmardīn b. Muḥammad b. Aẓharaddīn (1555–155?)
Ḥabīb b. ᶜUmardīn b. Muḥammad b. Aẓharaddīn (155?–59)

C. Religious leaders ruling in H. contemporary to the Walašmaᶜ *sulṭans*:

Aḥmad b. Ibrāhīm al-Ġāzī (Grañ) (1525–43)
Nūr b. Muǧāhid (1551/2–68)

D. Rulers of H. between Nūr b. Muǧāhid's death and the transfer of the capital to Awsa:

ᶜUṯmān b. Badlāy (1568–69)
Ṭalḥa b. Abbās b. Aboñ (1569–71)
Naṣīr b. ᶜUṯmān b. Badlāy (1571–73)
Muḥammad b. Naṣīr b. ᶜUṯmān (1573–76)
Manṣūr b. Muḥammad b. Ayyūb (1576)
Muḥammad Gāsā I (1576, transfer of the capital to Awsa)

E. Governors (*wazīrs*) of H. in the name of the rulers of Awsa:

Muḥammad Gāsā II (1576–84)
Saᶜdaddīn (1584–1613)
–
Ṣabraddīn b. Ādam (before 1620–24/25)
–
Ṣadīq (died in 1646)
Ādam b. Ṣadīq (1646–47)
Aḥmad b. Abrām (1647)

F. *Amīrs* of the ᶜAlī b. Dāᵓūd dynasty till 1875 (according to Tedeschi in PICES 4):

ᶜAlī b. Dāᵓūd (1647–62)
↗Hāšim b. ᶜAlī b. Dāᵓūd (1662–71)
ᶜAbdallāh b. ᶜAlī b. Dāᵓūd (1671–1700)
Ṭalḥa b. ᶜAbdallāh b. ᶜAlī b. Dāᵓūd (1700–21)
Abū Bakr b. ᶜAbdallāh b. ᶜAlī b. Dāᵓūd (1721–32)
Ḫalaf b. Abī Bakr b. ᶜAbdallāh b. ᶜAlī (1732–33)
Ḥāmid b. Abī Bakr b. ᶜAbdallāh b. ᶜAlī (1733–47)
Yūsuf b. Abī Bakr b. ᶜAbdallāh b. ᶜAlī (1747–55)
Aḥmad b. Abī Bakr b. ᶜAbdallāh b. ᶜAlī (1755–82)
Muḥammad b. Yūsuf b. Abī Bakr b. ᶜAbdallāh (1782–83)
↗ᶜAbdaššakūr b. Yūsuf b. Abī Bakr b. ᶜAbdallāh (1783–94)
Aḥmad b. Muḥammad b. Yūsuf b. Abī Bakr (1794–1821)
↗ᶜAbdarraḥmān b. Muḥammad b. Yūsuf b. Abī Bakr (1821–25)
↗ᶜAbdalkarīm b. Muḥammad b. Yūsuf b. Abī Bakr (1825–34)
↗Abū Bakr b. ᶜAbdalmannān b. Muḥammad. b. Yūsuf b. Abī Bakr (1834–52)
↗Aḥmad b. Abī Bakr b. Abdalmannān b. Muḥammad b. Yūsuf b. Abī Bakr (1852–56)
↗Muḥammad b. ᶜAlī b. ᶜAbdaššakūr b. Yūsuf b. Abī Bakr (1856–75).

Ewald Wagner

Harär under Egyptian occupation 1875–85

The Egyptian expansionist drive in northeast Africa reached its climax in the 1870s with *ḫidīw* ↗Ismāʿīl's grand plan to establish his "African empire" from the Red Sea and the Indian Ocean to the Nile. In late 1875 a wide-scale joint military effort to invade the Ethiopian highlands, encircle Ethiopia, and create territorial continuity with Egyptian territories in the Sudan was launched concertedly by expeditions heading inland from ↗Massawa, ↗Taǧūra and ↗Zaylaʿ. Leaving Zaylaʿ with an expeditionary force of some 1,200 troops on 18 September 1875, ↗Muḥammad Raʾūf *bāšā* advanced towards H. encountering some resistance from Oromo groups. Capturing the city on 11 October with no opposition whatsoever, the Egyptians put an end to the independence of the city-state since the mid-17th cent. On 26 October *amīr* Muḥammad b. ʿAlī b. ʿAbdaššakūr (r. 1855–75) was executed.

The first set of Egyptian measures aimed at establishing authority over the neighbouring Oromo, whose submission was instrumental in ensuring the viability of the new conquest – more specifically, securing the caravan routes leading to and from the city and the agricultural exploitation of H.'s hinterlands. To this end, Raʾūf *bāšā* conducted brutal campaigns in the countryside in February and March 1876. The Oromo were compelled to cultivate their lands and plant grain and coffee. Thousands of Oromo notables responsible for parcels of land were appointed and given the old Harari title of ↗*gärad* or *maläq* in return for a fee in cattle and the commission to collect a tithe. This process had far-reaching effects on the social and political structures of the Oromo groups, precipitating the collapse of the ↗*gadaa* system. Many were grouped in settlements, converted to Islam, and were further incorporated into the town's economic and social structures. Nonetheless, instability and insecurity around H. prevailed throughout the decade-long occupation and effective Egyptian authority seldom reached further than 40–50 miles away from the city.

The Egyptians replaced Haräri traditional local government with modern administrative, judicial and taxation systems. H.'s urban landscape (infrastructure) was transformed by the construction of public buildings, including the *dīwān*, the main mosque, a hospital, and a grain store. Impressive geographical and cartographical surveys were conducted in the town and its region, most notably under the direction of ↗Muḥammad Muḫtār *bāšā*. In May 1878 Charles ↗Gordon ended Muḥammad Raʾūf *bāšā's* governorship and replaced him with Riḍwān *bāšā* who served as Governor until June 1880. Under the governorship of ↗Muḥammad Nādī *bāšā*, European merchants, such as Xavier Alfred ↗Bardey, settled in H. establishing trading houses. They mostly purchased coffee and hides for exportation, and imported European goods. Throughout the decade commercial activities intensified and the yearly circulation of caravans between H. and the coast increased from 70 to 400. Further evidence to H.'s increasing exposure to Europeans is attested by the establishment of a French Capuchin mission headed by Monsignore Taurin ↗Cahagne in April 1881. The Egyptian period was also characterized by the dynamic diffusion of Islam in the region and by the construction of mosques, Qurʾānic schools and the introduction of the *Ḥanafī mad̲h̲ab* (↗Ḥanafism). The last governor of H. was ʿAlī Riḍā *bāšā* from December 1882 to early 1884.

The Egyptian occupation of H. came to an end as a result of the Egyptian financial crisis leading to the British occupation of Egypt in 1882. Under British pressure, the gradual evacuation of Egyptian forces began in 1884 and ended in mid-1885. *Amīr* ↗ʿAbdullāhi b. Muḥammad's short reign since 20 May 1885 was ended by ↗Mənilək's occupation of H. in January 1887.

Harär from the late 19th to the late 20th century

In 1887 the army of *nəguś* Mənilək (later *aṣe* ↗Mənilək II) defeated a force of Harari and allied troops at ↗Č̣ällänqo. Thereafter, H. and its surrounding regions were incorporated into the future emperor's expanding realm; by the early 20th cent., Mənilək's officers had established firm control over the conquered area.

Unlike with most other subjugated lands in the south, H.'s pre-conquest governments historically employed literacy as a tool of governance. Therefore, *ras* ↗Mäkʷännən Wäldä Mikaʾel and subsequent governors inherited long-established administrative structures and official archives. Prudently, they chose not to destroy or replace them, but rather to rule through and with them.

H.'s governors thus oversaw a complex bureaucracy, at the apex of which was the newly-created Governor's Office (GO). The GO maintained close communications with various ministries in the capital in order to discern imperial policies. It pursued their implementation by controlling and coordinating a variety of pre-conquest institutions, which it staffed with both local and immigrant political appointees.

One of the most important of these institutions was the *dīwān*, historically the backbone of Harari administration. It was comprised of two sections, with one responsible for maintaining land records and the other for judging court cases according to the ↗*šarīʿa*. *Dīwān* documents were enormously helpful to the GO, but they were written in ↗Arabic, which few immigrants knew. Therefore Harari officials were retained, though over time Christian employees were increasingly assigned to work there as well. Another example of a pre-existing institution through which the GO administered H. and the ↗Harärge province was the ↗*afärsata*.

The retention of such historically developed institutions should probably be viewed as a practical attempt to administer a large region as inexpensively as possible. Nonetheless, with the influx of large numbers of other ethnic groups social tensions ensued. The general chaos of World War I years did nothing to assuage matters, especially when H. came to be regarded as a stronghold of support for *ləǧ* ↗Iyasu, who appeared to challenge the old socio-political order.

By the 1920s the previously dominant urban position of the Harari had declined in favour of immigrants, mostly Christian, who managed to extend their land holdings from outside the old wall to inside it as well. They did so by granting large and ultimately un-repayable loans to the Harari who, feeling it necessary to host sumptuous funeral and wedding ceremonies, put up their title deeds as collateral.

To stem the growing tide of land confiscations, a small group of prominent Harari men established a cultural organization named *firmāč* (lit. 'signatures', since the founders allegedly signed a covenant together). The goal of *firmāč* was to protect Harari property ownership and maintain ethnic unity by discouraging cultural practices that were deemed to be damaging to the community as a whole. *Firmāč* also opened the first Islamic school in H. that taught "modern" subjects in addition to religious lessons.

The Italian invasion of 1935-36 was generally welcomed in H. The Fascist policy of pitting different ethnic and religious groups against each other resonated with Harari who had grown resentful of Christian "Amhara" domination. Under the Italians, mosques were built, use of Arabic was encouraged, Harari and other Muslims were hired by the administration, and previously confiscated lands were restored to their original owners or their descendents.

That taste of "freedom" was not quickly forgotten after *aṣe* ↗Ḥaylä Śəllase I regained his throne in 1941, particularly when his local representatives endeavoured to restore the status quo ante of the Emperor's political power. Consequently, when members of the ↗Somali Youth League began agitating in H., members of a nascent Harari nationalist movement joined forces with them (↗*Kulub*). In 1947, they sent a joint delegation to Mogadishu, to meet with a

↗United Nations commission that was soliciting and evaluating local opinions about how the ex-Italian colonies should be governed in the future. When Addis Abäba learned of this Harari-Somali delegation it reacted with fury and arrested most adult Harari men, detaining a significant number for several years. Additionally, Harari properties were confiscated and travel restrictions imposed. Thereafter, many Harari began, for the first time in history, leaving their homeland with no intention of ever returning. They settled both near and far, from Ǧiǧǧiga and Dərre Dawa to Addis Abäba and Arab Gulf states, and eventually in Europe, North America and elsewhere.

Those Harari who remained and were willing to cooperate with the dominant political arrangement were integrated into Ethiopia's educational, economic and military structures far more than previously, perhaps encouraged by the state's construction of a high school and a military academy in H. Nonetheless, appointment of Harari to potentially sensitive positions took longer, and by the 1970s Harari dissatisfaction remained high. After the ↗Revolution of 1974, when the *Därg* officials began appropriating personal and family properties and forcibly conscripting Harari youth into the army, and when the town suffered during the Ethio-Somali war of 1977/78, those who could flee abroad did so, mainly to Italy, Canada and the United States.

With this exodus, a strongly rooted centripetal force of Harari culture, which had began to weaken only after the repressions of the *Kulub* crackdown, was broken. The passing of that force meant that little socio-cultural pressure remained to keep Harari at home, or to draw them back to reside there, as in the past. Nevertheless, the urban centre of H. remains central to Harari identity, both in and around the town itself, and throughout its national and global diasporas.

During the early 1990s, after the Ethiopian Peoples Revolutionary Democratic Front (EPRDF) seized power, the Harari and others were encouraged to use their own language (rather than Amharic) in official capacities. Considerable efforts were subsequently undertaken to develop Harari as an educational and administrative language. For writing purposes, the Ethiopic syllabary was selected and adapted to the specific requirements of Harari, and a substantial number of educational materials, administrative guidelines, cultural and historical treatises, and literature pamphlets and books were published.

This development was related to a more general Harari cultural revival, which also stressed the importance of ↗Islam. One example is the increasing observance, by both young and old Harari men and women, of an optional week-long fast, during the month of *Šawwāl*, immediately following ↗*Ramaḍān*. The conclusion of the *Šawwāl* fasting was marked by celebrations (↗Feasts) that occasionally draw to H. large numbers of non-Muslim Ethiopian tourists from Addis Abäba and elsewhere. The complex social interactions of Sufi rituals at H.'s numerous saints' shrines both reified local Islamic identity and served to soften differences between Muslims of different ethnic groups, a noteworthy phenomenon in light of the EPRDF's ethnically-based political philosophy.

The new government in Addis Abäba also urged Ethiopians to develop their own political parties to take responsibility for administering the provinces. By 1994, two groups vied for power in H. The Harari National League (HNL) espoused a narrow ethnic line: H. should be ruled only by the Harari. This stance derived at least partially from the threat of H. being absorbed by the much larger surrounding Oromiyaa region, which would have reduced the Harari once again to minority status. The Harari Democratic Unity Party (HDUP), on the other hand, favoured a broader coalition, consisting of members of all ethnics residing in and around H. After a tense period of competition, occasionally marked by violence on both sides, the HNL gained the ascendancy, which it retains to this day.

Harär Military Academy

The Ḫaylä Śəllase I Military Academy, at Harär, was established by Emperor ↗Ḫaylä Śəllase I to train elite officers for the Ethiopian ↗army and

↗Imperial Bodyguard. Founded on 6 October 1958, after his state visit to India in 1956, the Academy was initially entrusted to a group of Indian officers led by Colonel N.C. Rawling. The Emperor favoured their country on account of its well-established military reputation, as well as its non-aligned and anti-colonial stance. The institution was later run by two further groups of Indians, but was subsequently "ethiopianized" under a senior Ethiopian officer, Brigadier-General Ḫayle Baykadañ.

The H.M.A. provided three-year courses for around 300 cadets, who had completed their high-school education with good marks. They were given comprehensive instruction in weapons training; tactics; staff duties; map reading; field engineering; signals; intelligence and security; administration, and staff management; military law; military accounts; first-aid, sanitation and hygiene; equitation; animal management; and military history and geography. Scholarships were given to students from Nigeria, Kenya, Tanzania and Uganda, as well as freedom-fighters from South West Africa (later Namibia) and apartheid South Africa. The H.M.A. was closed after the 1974 ↗Revolution, in 1977, during the *Därg* regime, by which time it had trained 930 officers, of whom 42 came from other African countries. Many graduates had risen to important positions in the Ethiopian army and others, among them Fəśśəḥa Dästa and Bərhanu Bayyä, in the subsequent military government (Mammo Eshetu Haile Mariam 1990:12-63).

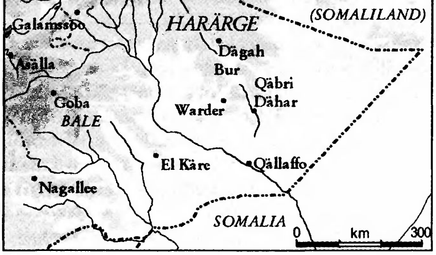
Harärge

H. (**ሃረርጌ**, also Hararge; Arab.: هررجى), with the capital in ↗Harär, was one of the largest provinces of the Ethiopian empire (with an area of 254,000 km²), and was composed of some 14 *awrağğas*. The 1987 reform of the ↗administrative division divided the region into East-Harär, West-Harär, ↗Ogaden and ↗Dərre Dawa. In 1991 the ᶜAfar, Somali and Oromo who share the Islamic faith obtained the distribution of the northern, central and south-eastern parts of H. between three *kəlləls*: ᶜAfar, Oromiyaa and Somali respectively. The Adäre (↗Harari) asked for a special status for the city of Harär, which had seen an influx of Täwaḥədo Christian Amhara, Amharicized Šäwans and Catholic missions from France. In the course of redivision, there were riots between Oromo, Somali, ᶜAfar and Amhara in the railway town of Dərre Dawa. The special region of Dərre Dawa (Dərre Dawa Administrative Council), which includes the town and the *wäräda* of ↗Gurgura, adopted Amharic as the working language.

The highlands and lowlands of H. are part of the "arid crescent" (Gallais 1989): summer rains are irregular and interrupted by a usually short dry season, which may occasionally last longer. The mountains of H., of volcanic origin in Çärçär and sedimentary in the Ahmar range, reach altitudes of over 3,000 m A.S.L. and are subject to summer rains. They extend eastwards into Somaliland, rising abruptly to the north over the ᶜAfar Triangle and leaning to the south against the sedimentary plateaux of Ogaden, which are watered by tributaries of the ↗Wabi Šäbälle river (i.e., Fäfän). Scarcely populated, the arid lowlands are used as grazing land by the ᶜAfar and Somali nomadic cattle- and camel-breeders. On the highlands, Oromo ↗Qottu and ↗Ittuu farmers formed settlements with densities over 150 inhabitants/km², mainly in the west in ↗Çärçär and east of Harär. Pastoralists compete among themselves for the control of grazing-land and wells and with the peasants for the oases in the piedmont.



Under the rule of *ras* ↗Mäkʷännən Wäldä Mikaʾel, H.'s confines expanded to the east and south, annexing the territories of the ↗Dir, ↗Isaaq and Ogaden Somali clans. Mäkʷännən's son *ras* Täfäri (later *aṣe* ↗Ḫaylä Śəllase I), governor of H. in 1910, used it as an economic and political base for his rise to the throne, as he controlled the railway which gave Ethiopia its only access to the ↗Red Sea. In 1942 Ḫaylä Śəllase granted his son ↗Mäkʷännən Ḫaylä Śəllase, *mäsfən* of Harär, the gouvernorate-general that included ↗Bale and extended over 383,100 km^{2}. The 1970 census listed H. (which by then became separated from Bale) with 2,440,000 inhabitants (density 9.5; 4,151,706 inhabitants in 1984, density 13.4).

The rulers of Harär – the Egyptians from 1875 to 1885 and Ethiopians from 1887 onwards – forced the Oromo farmers to produce an ever-increasing quantity of ↗coffee. The Qottu and Ittuu, converted to Islam and following the custom of the Harari, started chewing ↗*č̣at*, whose cultivators spread on the highlands around the town. In the lowlands, the ↗ʿIssa Somali and the Oromo pastoralists, who had lost the trade to the coast, were recruited to build, and later to run, the Addis Abäba – Djibouti railway; occasionally, they attacked it, exposing themselves to severe reprisals.

During their occupation of Ethiopia in 1935-41, Italians split the Ogaden (Isaaq and Ogaadeen clans) from Ethiopia and created the Governo di Harar, with a Muslim majority concentrated on the highlands, with a population in 1938 of 1,300,000 and a surface of 200,000 km^{2} (↗Africa Orientale Italiana). They built a road to connect it to Mogadishu and to Addis Abäba and encouraged the production of coffee. From 1941 to 1965, however, *č̣at* was gradually replacing coffee around Harär, being exported by air to Aden, by rail to Djibouti and by road to Somaliland. After 1965 the expansion of *č̣at* was slowed down by an increase in customs duties and the loss of the Yemeni and Somali markets. Under the *Därg* the Qottu and Ittu reacted against the tight control over coffee and resumed the cultivation of *č̣at*, of which 50 % was smuggled into Djibouti and Somalia. Today, the economy of H. and Harär depends on the production of this drug and on early vegetables for the domestic urban markets and for export.

Population indicators, despite their lack of precision, show a continuous growth of the H. population. Today, H. – within its 1984 limits – had 6,023,539 inhabitants (1994 census), a 45 % increase in ten years. The West Harär and East Harär zones of Oromiyaa had a population of 3,102,525 inhabitants, the zones in the Somali *kəlləl* 2,418,824 inhabitants, with a further 76,378 inhabitants for the special region of the town of Harär and 251,864 inhabitants for the special region of Dərre Dawa (164,851 inhabitants in the town itself). Such a growth has aggravated further land scarcity on the highlands, where the average density is over 200 inhabitants/km^{2} (in some places, even 400 inhabitants/km^{2}); the average size of farms ranges from 1 ha to 1.5 ha. Hills are indented with irrigated terraces, cultivated with a mix of cereals (millet, sorghum), of *č̣at*-hedges, potatoes, occasionally sweet potatoes and sugar cane.

The trade in agricultural products relies on a dense network of tracks connected to the Addis Abäba–Harär–Dərre Dawa highway. The highland route (asphalted in 2004) runs through a number of mushrooming towns. The *č̣at* harvest converges to Awä Wäday near ↗Alämayya, to be redirected to Djibouti via Dərre Dawa airport or to Somalia via Ǧiǧǧiga. Small towns have seen an impressive growth. Asbä Täfäri had 2,000 inhabitants in 1938, 9,578 inhabitants in 1970, 11,344 inhabitants in 1984 and 18,978 inhabitants in 1994; the figure rose to 30,423 inhabitants (CSA) in 2004. The military and administrative outposts of the Ogaden also grew substantially. Ǧiǧǧiga rose from 11,000 inhabitants in 1938, 58,360 inhabitants in 1994, to an estimated 89,531 inhabitants in 2004 (CSA). Gode, founded in the 1960s around the irrigated plantations along the Wabi Šäbälle river, saw its population rise from 40,585 inhabitants in 1994 to 62,397 in 2004 (CSA). It was a possible choice as the capital of the Somali *kəlləl* as an alternative to Ǧiǧǧiga.

Harari

Harari language

H. (self-name in the spoken language *gēy sinān*, 'language of the town', i.e., 'language of ↗Harär', Amh. **አደርኛ**, *adärəñña*, or **አደሬ**, *adäre*) forms, together with the Eastern Gurage languages (Səlṭi, Wäläne, Zay; s. ↗Gurage), the eastern group of "Transversal South Ethiopic" within the ↗Ethio-Semitic languages (classification of Hetzron 1972:42ff.; 119). While the present-day H. is spoken on a speech island, before the 16th cent. Oromo invasion there might have existed a coherent Semitic-speaking belt up to Eastern Gurage languages.

Until 1974 H. was the language spoken by ca. 30,000 people living inside the walls of the city of ↗Harär in south-eastern Ethiopia. The urban area outside the walls was occupied by the Amharic-speaking administrators, teachers, soldiers etc., while the countryside was populated by Oromo-speaking tribes. The 1974 Revolution destroyed much of the H.-speakers' means of existence, which led to a large-scale emigration to other parts of Ethiopia, especially to Addis Abäba, and to foreign countries like Saudi Arabia and Canada. Today more H.-speakers live outside Harär than inside the town.

We know H. in two chronologically different forms. Old H. was written in Arabic letters (Wagner 1983:7–16). The oldest datable text belongs to the 18th cent., but other texts may be even older. Modern H. seems to have developed during the 19th cent. and differs from Old H. in vocabulary, morphology and syntax. Since the 1990s it has been written with Ethiopic characters (Wagner 2004).

Since Harär was the centre of Islam in south-eastern Ethiopia, there are many ↗Arabic loanwords in Old as well as in Modern H. (Leslau 1956; 1959). The vocabulary of Modern H. is also much influenced by ↗Oromiffa. There might have been an Oromo influence on H. phonology and syntax (Wagner in PICES 13).

The vowel-system of Modern H. offers some problems. Normally H. is considered as one of the few Ethio-Semitic languages in which vowel length is phonemic, because it is lexically and morphologically fixed. On the other hand, it is hard to establish minimal pairs with the opposition between short and long vowels in Modern H., and Old H. did not use the capability of the Arabic script to express vowel length: plene and defective writing are mixed up without any rule. A possible remedy for the problem may be that the phonemicity was revived by Arabic and Oromo influence. In both languages vowel quantity is very relevant (Abdurahman Garad – Wagner 1998:157–68). Tentatively, we may establish the following vowel system: *a* (with the allophones: *ä* inside the words beside other consonants than *ʾ*, *ḥ* and palatals; *e* beside palatals; *å* after *w*); *ā*; *i* (with the free variant *ə*); *ī*; *u* (with the free variant *ə*); *ū*; *e* (seldom); *ē*; *o* (seldom); *ō*.

The consonant phonemes are: labials: *b*, *m*, *w*; labio-dentals: *f*; apicals: *d*, *t*, *ṭ*, *z*, *s*, *n*, *l*, *r*; palatals: *ǧ*, *č*, *č̣*, *š*, *ñ*, *y*; velars: *g*, *k*, *q*, *ḫ*; pharyngals: *ḥ*; glottals: *ʾ*. The most remarkable change in comparison with Gəʿəz is the falling together of *h*, *ḥ* and *ḫ*; a new *ḫ* originated from *k*. While palatalization is common in H., there is no labialization. H. has given up the gemination of consonants in verbal morphology, but there exist lengthened consonants in nouns and in consequence of assimilation, junction of morphemes etc.

The independent personal pronouns are:

	sg.		pl.
1st pers.	*ān*	1st pers.	*iññä, iññāč*
2nd pers. masc.	*aḫāḫ*	2nd pers.	*aḫāḫāč*
2nd pers. fem.	*aḫāš*		
3rd pers. masc.	*azzo*	3rd pers.	*azziyāč*
3rd pers. fem.	*azze*		

The dependent personal pronouns are attached to the noun (possessive suffixes) or to the verb (object suffixes). The former are partly built with the old genitive marker *zi-*. The latter may be proceeded by the originally prepositional elements *-b-* (malefactive) and *-l-* (benefactive).

Possessive suffixes

	sg.		pl.
1st pers.	*-e, -eʾe, -eye*	1st pers.	*-zina*
2nd pers. masc.	*-ḫa*	2nd pers.	*-ḫo*
2nd pers. fem.	*-ḫaš*		
3rd pers. masc.	*-zo*	3rd pers.	*-ziyu*
3rd pers. fem.	*-ze*		

Object suffixes (forms after consonantal ending)

	sg.		pl.
1st pers.	*-añ*	1st pers.	*-ana*
2nd pers. masc.	*-aḫ*	2nd pers.	*-aḫu*
2nd pers. fem.	*-aš*		
3rd pers. masc.	*-a*	3rd pers.	*-ayu*
3rd pers. fem.	*-e*		

There are two sets of demonstrative pronouns, partly identical with the personal pronouns of the 3rd person: *yi* (fem. *yitta*, *itta*, *ḥiya*, *ḥīya*, pl. *yiyāč*, *ḥiyāč*), 'this'; *ya'*, *azzo* (fem. *yatta*, *azze*, pl. *azziyāč*), 'that'.

H. nouns can be made definite by adding the definite article *-zo* (identical with the possessive suffix 3rd sg. masc.). There is no special marker for gender. The plural morpheme is *-āč*. The possessor in Modern H. is only indicated by its position before the governing substantive, while in Ancient H. most often it was additionally marked by a prefixed *zi-*. The direct object may be marked by the suffix *-(u)w* (Wagner 2002). As attributes, adjectives are placed before the qualified substantive and as predicatives they stand before the copula *ta*. In Modern H. postpositions are more common than prepositions.

The triradical verb has four types differentiated by the vowel behind the first radical: A *sabara*, B *sēbara*, C *sābara*, D *sōbara*. Normally, the difference between the types is only formal and no longer semantic. The derivational classes are formed by reduplication (*sibābara* for frequentative) or prefixes (*ta-* for reflexive, *a-* and *at-* for causative). Old H. had two tenses: past (*sabara*) and nonpast (or imperfect) (*yisabri*), and, apart from indicative, two moods: jussive (*yasbar*) and imperative (*sibar*). The nonpast was the normal form for present and future in main clauses. In Modern H. it is restricted to some subordinate clauses. In main clauses it is superseded by the compound nonpast, which is built by combining the simple nonpast with the auxiliary *ḥal*, 'to exist': *yisabri* + *ḥal* = *yisabrāl* (Wagner 1999). Into these forms, the object suffixes as well as the relative pronoun *zi-* are infixed: *yisabruḫāl*, 'they break you', *yisabrizāl*, 'who breaks'. Aside from the triradical verbs, there exist those with two or four radicals.

The normal word order is Subject – Object – Verb. Adjectives, possessors and relative clauses precede the qualified substantive and subordinate clauses the main clause. Several conjunctions are placed at the end of the subordinate clause. Some of them originate from substantives preceded by relative clauses. Relative clauses are widely used in H.: they replace adjectives, can be nominalized and can form cleft sentences. When nominalized, they may be used with a nominal plural marker and may be followed by the definite article *-zo* (Goldenberg 1983). In cleft sentences, which developed only in Modern H., the verb always needs a "pseudo object suffix pronoun" (Leslau 1965:154f.; Abdurahman Garad – Wagner 1998: 252–63) in the 3rd sg. masc., even if the verb has an intransitive or passive meaning. H. does not know a gerund; the suffix *-ma*, however, expresses almost the same meanings as the gerund in other Ethiopian languages (Leslau 1970; Abdurahman Garad – Wagner 1998:327–36).

The ten-word list is: *aḥad*, 'one', *ko'ot*, 'two', *ši'išti*, 'three', *mīy*, 'water', *isāt*, 'fire', *īr*, 'sun', *waḥri*, 'moon', *dam*, 'blood', *arrāt*, 'tongue', *sin*, 'tooth'.

Harari ethnography

The H., or Adäre, as they are known in Amharic, are the urban population of the city of ↗Harär, who refer to themselves as the *Gēy usu*ʾ, lit. 'people of the city'. They are a homogenous population with a strict preference for endogamy, and uniform adherence to Sunni Islam.

The city to which the name *Gēy usu*ʾ refers is the old centre of Harär, a clearly defined area that measures only 1.6 km by 0.8 km at its widest points, bounded by a wall known as *ǧugal* (the old city being sometimes also referred to as *ǧugal*). It is distinguished from the largely mixed and Amhara-populated new city, which has grown up beyond the city walls since the time of Harär's annexation into the Christian empire in the late 19th cent., as well as the surrounding area, which is largely inhabited by Oromo farmers.

The notion of "the city" is critical to individual and collective identity as communicated through *Gēy sinān*, the 'language of the City' (↗Harari) and *Gēy āda*, the 'culture of the City'. Since the ↗Revolution of 1974, however, a great number of H. have left Harär, some seeking economic opportunities in larger Ethiopian cities, principally ↗Dərre Dawa and Addis Abäba, a great many more seeking political asylum abroad. 1994 estimates by the Central Statistical Authority put the Adäre population at 15,000 of the 27–30,000 living within the *ǧugal* and estimate a population of more than 65,000 in the combined old and new cities.

Where H. have left the old city, Amhara, Oromo and Somali have moved in, creating a more ethnically diverse environment within the wall, though H. work to preserve homogeneity at the level of the neighbourhood. H. statisticians working on census-gathering in 1994 estimate that two-thirds of the total H. population now live outside Harär, suggesting a total population of 42–45,000 worldwide. While this leaves the H. a minority in the city and environs over which they have historically governed, this is true only in numeric terms.

Viewed in terms of class, as Waldron (1974) first pointed out, the H. occupy a position of privilege and prestige, sitting at the apex of a local pyramid of ethnic stratification, which has historically been built on the monopolization of local resources. H. have a long history as both wealthy landowners employing Oromo tenant farmers, growing the lucrative crops of coffee and ↗*čat* on some of the most fertile land in Ethiopia, and as merchants controlling inter-ethnic trade in local and imported goods and brokers dealing in exports. The importance of Harär as a regional commercial centre, however, was superseded by Dərre Dawa with the construction of the Addis Abäba–Djibouti railway in the early 1900s (↗Railways). The agricultural basis of the H. economy was largely undermined by land reform under the *Därg*, though rules for limited private ownership have allowed most H. families to keep some connection to their land.

With the economic and political upheaval of the 1970s, however, H. began to move out of the city in significant numbers for the first time. As a highly educated and literate population, they have easily adapted themselves to life in other urban centres, many engaging in trade-related activities and a great many pursuing higher education and professional training to become academics, doctors and engineers both in Ethiopia and abroad. Significant communities now exist in cities in Canada, Australia and the United States and a great many H. abroad send remittances back to Harär, allowing their families to continue to live relatively affluent lives (↗Diaspora). Wealth and status have traditionally been displayed through dress and household objects purchased during the ↗*ḥaǧǧ* to Mecca, but are increasingly demonstrated by the acquisition or receipt of western appliances and consumer goods.

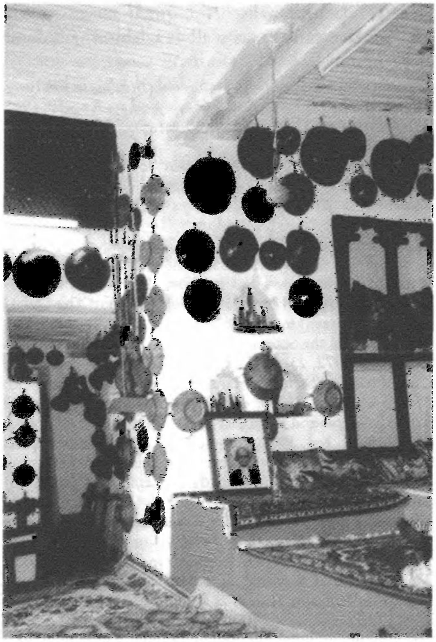
The historical literature suggests that the H. are in fact multi-ethnic in origin, most likely the result of intermarriage between Arab immigrants (arriving between the 9th and 12th cent.) and local residents, as well as strategic inter-ethnic marital alliances with the arrival of the Oromo in the area in the 16th cent. The wall, built in the 16th cent. by ↗Nūr b. Muǧāhid to keep out warring Oromo and ensure the governing emirate could strictly regulate and tax traders, allowed for an autonomous, self-governing city state. Even with the incorporation into the expanding Christian empire after the Battle of ↗Čällänqo in 1887, the H. maintained a system of local policing and self-governance through community associations primarily devoted to wedding and funeral observances (known as ↗*afōča*).

Internally, governance and conformity are achieved through a combination of religious, legal and social structures, most of which still exert undefiable influence. First and foremost is strict adherence to ↗Islam. H. place great emphasis on Qurʾānic literacy at an early age and are proud of their city as a historic regional centre of Islamic scholarship with a remarkable density of mosques, shrines and religious schools. Sex segregation in religious and social affairs is expected and observed, as is piety in dress, abstinence from alcohol, regular fasting, visits to the mosque and undertaking the pilgrimage to Mecca. Polygamy is permissible, but rare.

Local religious practices are syncretic, and include the reverence of ↗saints (Harari: *āwāč*; Arab.: *awliyāʾ*; ↗*Āw*), whose shrines are found within and beyond the city walls and whose blessings are sought at critical life junctures. A good number of these saints are female, lending support to the idea that pre-Islamic ancestral worship was not wiped out by the arrival of Islam, but rather reconceived and incorporated into a Muslim framework. Many H., particularly those outside the city, tend to dismiss these activities as superstitious, deeming them as *āda*, or culture, rather than religion.

Āda is the complement to religion and being H. demands adhering to the specific practices of *Gēy āda*, which are honoured daily through such things as manner of dress, food preparation, and the making of handicrafts such as baskets, as well as during rituals surrounding birth, marriage and other rites of passage. A critical part of cultural practice is language and the H. are a distinct linguistic community, whose language has been re-codified during the current era, and is now being taught in local schools. That said, H. are multilingual, most, in addition to their native tongue, speaking Amharic, Oromiffa and some Arabic, Somali and English.

Many co-resident Oromo, Somali and Amhara aspire to belong to the H. community and often do effectively assimilate through achieving religious, cultural and linguistic proficiency. Belongingness, though, is only achieved as Waldron (1974; 1975; 1980) noted: through one's place in the primary social institutions – the kinship group, the friendship group, the *tōya* neighbourhood and the *afōča* association. Overlapping ties and memberships situate an individual in a complex network of social relationships and concomitant obligations. This process of assimilation is a recognized means of enculturation known as *Gēy limād* ('learning the way of the city').



Harär, interior of a house; photo 2000, courtesy of Andreas Wetter

Abroad, H. recreate these basic institutions, founding community associations which act as large *afōčāčč* with extended responsibilities, serving to organize Qurʾānic and language classes for H. children, engage in fund-raising efforts for institutions in Harär, initiate entrepreneurial projects to develop the economy and infrastructure in Harär and encourage community events in the diaspora which are, to some degree, aimed at preserving and promoting endogamy.

In the diaspora, endogamy becomes even more critical and, as in Harär, ↗marriage is a family-sanctioned alliance, which places great emphasis on the achievements and potential of both the prospective bride and groom. In the diaspora, there is an articulated desire for "traditional" girls who will teach H. culture and values to the next generation. Relatives in Harär are consequently enlisted in finding suitable matches for sons abroad and marriages are often arranged in this manner.

A small degree of repatriation has occurred since 1991, largely individuals returning to fill positions in the administration of the new "Region 13" (within which the *ǧugal* serves as administrative centre), as well as within the federal government.

Camilla Gibb

Harari literature

People living in ↗Harär, the major centre of Islamic learning in the Horn of Africa, have produced a considerable body of written literature in ↗Arabic and in their own language, ↗Harari.

Traini (1973), Drewes (1984) and especially Wagner (1997) provide good surveys of the Arabic literature in Harär. A first group of texts is composed of several religious hymns and prayers. Wagner (1975) published four songs in praise of *šayḫ* ↗Abādir ʿUmar ar-Riḍā, *walī* ↗Hāšim and the other major saints of Harär, but their wider relationship with other instances of this genre from other parts of the Islamic world is still to be examined in proper detail. Among several doctrinal and moral texts in prose, three works by the *ḥanafī* scholar ↗Ḥāmid b. Ṣiddīq written in 1169 H. [1756 A.D.] and the following years have been discussed in some detail by Brunschvig (1974). A major work that is familiar to most Harari families is the *Fatḥ ar-raḥmān* by *šayḫ* Hāšim, probably to be identified as ↗Hāšim b. ᶜAbdalᶜazīz b. Amīr Hāšim (1123–79 H. [1711–65 A.D.]), rather than as the above-mentioned homonymous saint who lived in the 16th cent. It is a large collection of prayers, hymns and other texts of religious character.

Several historical works in Arabic originated from or around Harär. The largest of them is the well-known ↗*Futūḥ al-Ḥabaša* by ᶜArabfaqīh (Šihābaddīn Aḥmad), a detailed eye-witness account of the campaigns of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") against Christian Ethiopia, that is one of the major sources for knowledge of Ethiopia in the 16th cent. A number of minor historical documents have been published by Cerulli (CerIslam). An important pseudo-historical work is the much-later ↗*Fatḥ madīnat Harar* by Yaḥyā Naṣrallāh that narrates both historical and legendary events from 612 H. [1216 A.D.] to 700 H. [1301 A.D.] involving *šayḫ* Abādir and several other saints of Harär, and depicts many miracles, as well as the arrival of the "Portuguese" and the "Italians".

Finally, one should mention genealogies of *amīrs* or saints as a genre that lies somehow between written and oral literature, in so far as it consists of written lists that were often used as a support for their oral recitation or the narration of events from their lives.

The oral H.l. is still very much alive among the Harari, both in their town and in the diaspora. It includes songs that are performed on different occasion such as weddings, festivals etc. Some of them have been published by Leslau (1947) and more recently by ᶜAbdalmuhaymin ᶜAbdannāṣir (1988 A.M. [1995 A.D.]). As in most oral traditions, there is also a wealth of folktales. Some of them are about animals and are not much different from those of other traditions in the Horn of Africa; yet there are many tales about legendary events that involve the well-known walls of Harär and many of its saints (s., e.g., Cerulli 1936:205ff.). Good collections of proverbs and riddles have been published by Leslau (1982–83) and ᶜAbdarraḥmān Muḥammad Qorrām (1984 A.M. [1991 A.D.]). As frequently observed in such genres, their language is not everyday Harari and includes several archaic words and forms that are typical of Old Harari. Indeed, some speakers call this older language *maḫmāḫa gēy sinān*, i.e., 'Harari language of the proverbs', rather than *awwal gēy sinān*, 'Harari language of former times'.

Old Harari is the language of most of the *ʿağamī* literature from Harär, i.e. of most of its literature in Arabic script. Even though it is difficult to give absolute dates, relative chronologies can be set up on the basis of orthographic peculiarities, such as the systematic use of *tāʾ* (ت) for *č*, and *ṭāʾ* (ط) for *č̣* in the older texts, as well as of linguistic features, such as the occurrence in main clauses of innovated compound imperfect forms like *yisabr-āl* 'he breaks' instead of the older *yisabri*, the forms of negative and relative tenses etc. An important part of this literature consists of religious hymns, that are still sung during *zikri* ceremonies (*↗Ḏikr*) and other important events (Gibb 1996:116f.). One of the oldest of them is the very long hymn by *šayḫ* ᶜAbdalmālik, known to Cerulli (CerLett 132) as the "Canzone dei quattro Califfi", the Song of the Four Caliphs. It has been published by Wagner (1983:53–216) as the *zikri* of ᶜAbdalmālik and counts 542 lines organized in stanzas with alphabetical rhymes. Like other old Harari religious hymns, its language is a peculiar mixture of Arabic and Harari, as pointed out by Wagner (1988). For instance, in Wagner's edition of this poem the fourth line is دواإ تخون لجميع داء صلاتك لة شفاء (*dawāʾ-in tuḫun li-ğamīʿi dāʾ – ṣalātu-ka l-ī šifāʾ*, 'You are a medicine for every disease; your intercession is a cure for me'), where only the suffix *-in* of positive copular clauses and the verbal form *tuḫun*, 'you are', are properly Harari. *Šayḫ* ᶜAbdalmālik is said to be the author of other hymns as well and is traditionally believed to have lived at the beginning of the 13th cent., at the same time as *šayḫ* Abādir. This date is probably too early, but the language and orthography of his works place them among the oldest group of *ʿağamī* texts from Harär, i.e. in the 15th or 16th cent. Other old hymns are those attributed to Aṣlaḥaddīn Taqī and published by Wagner (1983:222–65). Several other texts are yet to be published and properly studied in their internal and external history. Locally they are still copied by devout people and a few learned Hararis even compose new hymns in the old language. An example of this is the new *↗Mawlūd* published by *šayḫ* Abū l-Ḥasan Nūraddīn ᶜAlī (2000), that includes, besides well-known Arabic religious poems like the قصيدة البردة (*Qaṣīdat al-burda*) by al-Būṣīrī, widespread in the entire Muslim world, also Harari hymns by contemporary authors (s. Gibb 1996:116f.).

Šayḫ Hāšim, who was mentioned above as the author of the *Fatḥ ar-raḥmānī* in Arabic, is also the author of a well-known prayer (*duʿāʾ*) in rhymed prose, the *Muṣṭafā*, where Arabic alternates with Harari (Wagner 1983:21–52; *šayḫ* Abū l-Ḥasan Nūraddīn ᶜAlī 2000:6ff.). Like the above-mentioned *zikri* of ᶜAbdalmālik, there are both long and considerably shorter versions of the *Muṣṭafā*. Another well-known text in Harari prose is كتاب الفرائض (*Kitāb al-↗farāʾiḍ*; s. Cerulli 1936:282–343), which consists of two texts from the 16th or 17th cent. The first one is a collection of numerical sayings about several aspects of life including religion, that is attributed to *āw* ᶜAbdarraḥmān al-ᶜArāšī in the colophon of most manuscripts. The second was composed by *faqīh* Ṭayyib al-Wanāğī aṣ-Ṣadrī according to some manuscripts, and by ᶜAbdallāh ʿUmar b. Ğibrīl according to others; it begins as a catechism and goes on with a series of numerical sayings about Islam.

Non-religious poetry in Old Harari is represented by the *Masnoy*, still sung by women especially during wedding ceremonies. Parts of it have been published by Cohen (1931) as "Chants de noce", but it is clearly written as a single text of at least 250 lines in the three manuscripts – probably from the 18th cent. – that preserve it, and also the Harari perceive it as such. A less known poem is the كتاب الفقر (*Kitāb al-faqar*, 'The Book of Songs') by *kabīr* ʿUmar ᶜAbdōš, that praises the bride and her bridegroom and depicts the situation in Harär at the end of the 19th cent.

After the conquest of Harär by Mənilək II in 1887, the Ethiopian script started to be used for Harari. One of the first examples is the **ጌይ፡ አጃእብዞ** (*Gēy ağāʾibzo*, 'The extraordinary things of Harär'), a short narration of the history of Harär from the time of Aḥmad Grañ to 1887 by Yosef Täklä Haymanot. During the last decades, while the *ʿağamī* script is still widely used for traditional religious purposes, the Ethiopian script with an adapted orthography has been increasingly used for publishing in Harari, from the journals like *Šahan* and *Zi-Harari Ṭaba* published in the diaspora, that frequently include short narrative texts and poems, to the above-mentioned volumes of proverbs and of songs by ʿAbdarraḥmān Muḥammad Qorrām and ʿAbdalmuhaymin ʿAbdannāṣir, the books that are used in the Harari-speaking schools of Harär, and a few other ones as well.

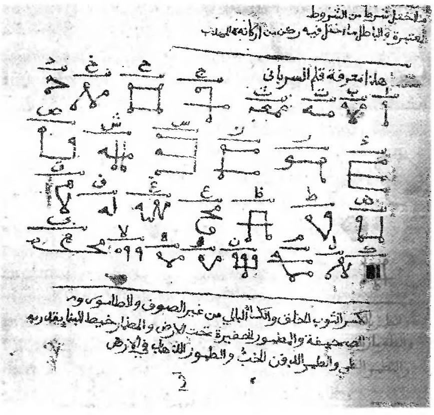
Giorgio Banti

Harari secret script

Oral tradition in Harär reports that Harari texts and manuscripts have existed which were written in an ornamental secret script. Very few of these texts have been preserved. Tradition suggests that it had been used as a secret writing-system among local Harari scholars and students, who normally wrote in Arabic. In this script were specially written letters with short messages in Harari language, still in the 1940s and up to the 1970s. Tradition calls it the *Suriyani* ('Syrian') script or "Ibrahim's Alphabet" (von Rosen 2003: 169 calls it "Alphabet of Abraham"). It might have been imported to Harär in the 19th cent. (possibly even before) and used in the time of the occupation by the Šäwan army.

According to the traditional scholar *ḥāğğī* ʿAbdulwadūd Wābar, he had himself written a manuscript in this script in the 1930's. This, however, got lost when he was imprisoned during persecutions in Harär in the late 1940's, his family burning it together with other books out of fear. Other texts had been destroyed in the same period. The political background seems to have been the movement for local autonomy in Harär after the 1941 liberation, followed by persecution by the Ḫaylä Śəllase I regime. During this period, Harari may have used this script for secret communications. Von Rosen is the only author who published, in the 1940s, a sample of the script, including a list of characters with their meaning in Arabic. He relates that, according to a local informant, the script originated from Urfa, east-north-east of Aleppo. His informant said, however, incorrectly, that no manuscripts in this script existed. But he showed him a Harari manuscript in which the characters were listed. Based on this report, Wagner (2003) mentions the script as a Harari secret writing-system.

Recently there had been several local attempts to revive this script for the Harari language, but this failed as the script is difficult both for handwriting and print. In local oral tradition the fact



Folio with Harari secret script and its description; 19th cent. (?), from the manuscript collection of ʿAbdullāhi ʿAlī Šarīf, photo courtesy of the author that this script existed is still preserved by some, but the knowledge of the script itself is almost extinct.

Harari writings contain information on other similar secret writing systems, whose origins had not been studied yet. Their use for the Harari language – different from the "*Suriyani*" script – is not documented.

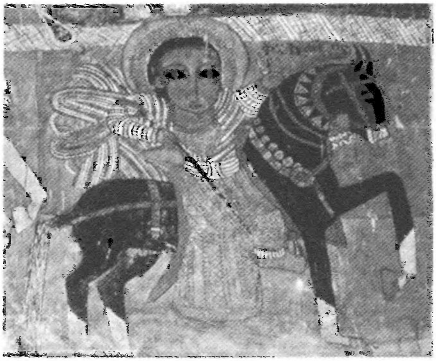
Ḥarbay

Ḥ. (ሐርበይ, also Ḥarbe or Qəddus Ḥarbe, fl. late 12th cent.), a king of the ↗Zagʷe dynasty, is venerated as a saint in the ↗Ethiopian Orthodox Church. According to the "long" version of the traditional Zagʷe "kings lists" (where he also appears as the last monarch of this "house"), he reigned 40 years; according to the less authoritative "short" and "longer" versions, eight years alone (CRStor 303–07, 317; Huntingford 1965: 8ff.; SerHist 240; TadTChurch 55f., n. 3).

The son of ↗Žan Śəyyum, Ḥ. married a certain Märkeza, who begot him ↗Näʾakʷəto Läʾab. Ḥ. ascended the throne immediately after his cousin *aṣe* ↗Yəmrəḥanna Krəstos and was followed by his brother ↗Lalibäla, whose 15th-cent. Vita is a major source of information about Ḥ.'s own life (Perruchon 1892:15ff., 31–34, 40–45). A few other details about Ḥ. and his family are found in the 15th-cent. Vita of Näʾakʷəto Läʾab: here the latter's father is called Gäbrä Mäsqäl (Conti Rossini 1943:115). A *Gädlä qəddus ʿArbi nəguś* ('Vita of the saint *nəguś* ʿArbi [= Ḥ.]') is mentioned by Aklilä Bərhan Wäldä Qirqos (1963: 80), but remains unpublished and on the whole unknown to date.

In the Vita of Lalibäla, Ḥ. is said to have persecuted his brother – up to trying to poison him with the help of their sister – as a potential rival for the throne (Perruchon 1892:15ff.). Later, Ḥ. would have reconciled with Lalibäla, even abdicating in his favour and passing on to him his royal name, Gäbrä Mäsqäl (*ibid.*, 44f., with the passage, omitted by Perruchon, published in Kur 1972:400f.). Beyond the hagiographic canonization of the events, it is more likely that Lalibäla had him deposed through force of arms after a long family struggle (CRStor 307; Conti Rossini 1943:106), as indicated by local traditions still alive in contemporary popular painting (Tubiana 1963:221-28).



Ḥarbay, cloth mural (detail), 17th cent., Säqoṭa, Wəqro Mäsqäl, west façade; photo 2000, courtesy of Michael Gervers

As to the name Gäbrä Maryam reportedly given to Ḥ. (along with 32 years of reign) in an elusive Ethiopic manuscript quickly seen at Lalibäla (Lasta) by ↗Raffray (1881:344ff.) and Simon (1885:322f.), and random read and translated for them by the Lazarist Duflos, it could simply be a misunderstanding for Gäbrä Mäsqäl (s. Tedeschi 1990:337f.).

An impressive 17th-cent. Gondärine mural (on primed cloth glued to the walls) with "Qəddus Ḥarbay" and the three other holy Zagʷe kings equally on horseback (↗Equestrian saints) is in the left-hand wall of the west façade of Wəqro Mäsqäl (Krəstos) church near ↗Säqoṭa in Lasta – the rulers of which claimed descent from that dynasty (Getatchew Haile 1984:42, 47). The same four kings are depicted standing in two Lastan booklets of miniatures (↗*Sənsul*), 17th and an 18th cent. respectively, both drawing on conventional Gondärine iconography: the former's exact provenance and location are presently unknown (Heldman 1993:247f., no. 109); the latter belongs to the church of Ašätän Maryam (↗Ǝšätän), near Lalibäla (ChojEthP 492f., 523, fig. 235c; Tedeschi in EncSant vol. 2, 159f., ill.).

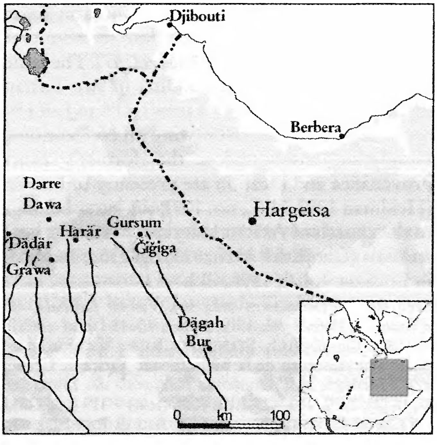
Hargeisa

H. is a Somali town which developed most probably during the second half of the 19th cent. as a *ṭarīqa* settlement (Qādirīya; ↗Islamic brotherhoods), established by *šayḫ* Maddar, in the vicinity of a water-point for nomadic stock-herders on the way to Harär. The name H. most likely derives from the nickname *Harär as-ṣaġīr* ('Harar the little'). By the end of the 19th cent., it was visited by Swayne, who described the results achieved there in sorghum cultivation, and Robecchi-Bricchetti. In 1870 the town was captured by Egyptian forces, who withdrew from North Somalia in 1884. In the early 20th cent. it was ravaged by the anti-British campaign of *sayyid* ↗Muḥammad ᶜAbdallāh Ḥasan (the "Mad Mullah"), who launched his guerrilla movement in 1899. British colonial rulers decided to move the capital of ↗British Somaliland to H. in 1941. Under British rule, it developed as a commercial town.



After 1960, H. declined as a political centre following the amalgamation with the former Italian Somalia, but retained its importance as a commercial centre and as the second-largest city in Somalia – the biggest in the northern region (in 1980, its population was estimated at 70,000). Under the military rule (1969–91), economical decline continued. During the ↗Ogaden war of 1977–78, H. functioned as a logistics centre and headquarters for military operations. After Somalia's defeat in the war, the economy of the North-West region was severely damaged by the creation of various Ogaden-refugee settlements.

In 1981 the Somali National Movement (S.N.M.) was organized in London. S.N.M. launched a political and military struggle in northern Somalia, capturing most of H. in May 1988. However, it was later ousted by a full-scale military counter-offensive following a systematic bombardment, which destroyed part of the city, caused several thousand casualties and forced many thousands of people to flee to Ethiopia.

In 1991, after expelling the Somali troops from the North-West region, the S.N.M. proclaimed independence and declared H. the capital of the new, non-recognized, state. The economy boomed and the population rose to an estimated 350,000 people in 2004. A university was officially inaugurated in February 2000, thanks mainly to the financial support of the diaspora, whose revenues constitute the main resource for the region's economy.

Hariyyaa

H. (or *Hiriiyaa*), a widely used word in the ↗Oromo language, has related meanings. Tutschek (1844:199), who used the spelling *hiria*, translated it as 'of the same age, Kamerad, aequalis'. The ↗Boorana have applied H. to their "formal organization of age groups that exists separate and apart from the generational organization" ↗*gadaa* (Asmarom Legesse 2000:105). Boorana also use H. for 'age-set' and as a form of affectionate address between members of the same set. Women are not members of sets but may use H. in casual conversation to age-mates of their husbands and to persons of both sexes of approximately their own age.

H. should never quarrel in public. They should always support each other in hunting, raiding and war and in social activities such as dancing and courting. Occasions which could cause dispute are limited by custom; a man cannot take offence at verbal abuse from a H. and, most strikingly, there cannot be adultery cases between age-mates. It is recognized that age-set amity can be difficult to achieve among young men who are in competition as warriors and as lovers. As one proverb goes, *Hariyyaa ilkaan koblaa garaa keessa morka*, 'Age-mates laugh with their teeth but competition is in their bellies' (Leus 1990:141).

Dance of Hariyyaa youngsters at Buso; photo 1934/35, courtesy of the Frobenius-Institut, Frankfurt am Main (no. 13-KB038-12)

H., like other East African age-sets, are intended to keep some control over the warlike ebullience of young men. Boorana probably devised H. as a practical military response to the generational rigidity of the *gadaa*-system, which dispersed men of warrior age across a span of *luba* (Baxter 1978:177f.). Boys born during the eight-year time-span of one *luba* make up one H. but otherwise the age- and generation-systems are quite distinct. The age-sets of some ↗Gabbra phratries, though based on a different time-scale, use the same names (Schlee 1989:84). Each Boorana H. holds a central naming ceremony, at which office holders are appointed, which is replicated at a number of local sites. Members of a H., or even of several H., may be called up together in emergencies, but members mostly act in locally based bands. An age-set is most likely to be active while its members are young and before they get enmeshed in domestic responsibilities. Ethiopian, Italian and Kenyan governments, observing that raiding increases after the creation of a new set, often restricted or banned the public performance of apparently aggressive age-set ceremonies.

The Konso "borrowed" the word H. "from the Borana" with "the sense of children who have grown up and played together"; but Konso H. were "not recruited on the basis of age at all" and were "perfectly integrated with the (generation) grades. By the mid-1960s the [H.], presumably the result of the cessation of warfare", no longer appeared to perform any "corporate duties" (Hallpike 1972:13f.; 186f.). By the mid-1990s even the generation-sets were "hardly operating" (Watson 2002:211).

Paul T.W. Baxter

Ḥarla

Ḥ. (ሐርላ, Arab. حرلة Ḥarla, هرلة, Harla) is the name of a population that is mentioned in Arabic and Ethiopian historical sources since the 14th cent. In al-Mufaḍḍal's chronicle (quoted in CerIslam 264) they are subject to the king of ↗Amhara, together with ↗Damot. In later sources, the so-called *Chronicle of ʿAmdä Ṣəyon*, the *Futūḥ al-Ḥabaša* and the *Awsa Chronicle*, they are allied to such Muslim leaders as the *qāḍī* ↗Ṣāliḥ, ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") and the *imām* Muḥammad. In the *Futūḥ* the Ḥ. are one of the four main components of Grañ's army, together with the Somali, the ↗Mäläsay and the Arabs. One of their main settlement areas (Arab. *balad*) is Zarba (BassHist 97 text] = 170 [tr.]), where farmers (Arab. *ḥarrāṯūn*) are mentioned explicitly. Zarba also occurs in the *Futūḥ* as the name of a tribe, together with other Ḥ. tribes such as the Zaman Bara, the Barzara, the Yaqula, the Ǧāsār, the ʿArab Taḫā and the Alqā (BassHist 56f. [text] = 118 [tr.]).

The late ↗*Fatḥ madīnat Harar* reports one of the oral traditions that are told now in south-eastern Ethiopia: the Ḥ. were a tribe that lived in the region of Harär in older times and dispersed because of plague and famine (cf. WagFath 46f.). Also, the ↗Karrayyuu in eastern Šäwa say that their region was previously inhabited by the Ḥ. According to other traditions, the Ḥ. were giants who built the ruined settlements in the area of ↗Ǧiǧǧiga and were punished by God, who sent against them a terrible wind that transformed everybody it reached into large rocks, still to be seen between Dərre Dawa and Harär (s. Mohamed Abdi Mohamed 1990:350). Between these two towns there is also a village called Ḥ., where an Arabic funerary inscription from 44? H. [ca. 1048–57 A.D.] has been found (Schneider 1969).

Paulitschke (1893:43) knew the Ḥ. as a subtribe of the ʿIssa Somali, living south-west of Zaylaʿ. Cerulli (1964), on the other hand, described a Somali group known as Ḥ. – self-denomination *Raḥál* – who live further to the south in the upper Fafan valley between Harär and Ǧiǧǧiga. Unlike the previous group of Ḥ., these claim to be ↗Daarood, descending from Koombe, the common ancestor of the ↗Garri and the Harti. The former are a large group of partially agriculturalist Somalis settled around Ǧiǧǧiga and towards Harär, while the latter is the ancestor of the major north-eastern Somali clans, the Majeerteen, the Warsangeli and the Dhulbahante. Cerulli (1964) published a few words and sentences of the *af Ḥarlaad* (lit. 'language of the Ḥ.') used by the Ḥ. of the upper Fafan valley. It seems to be a jargon or argot that is partially similar to those spoken by Somali low castes such as the Yibir or the Midgaan. For instance, it includes a number of phonetically manipulated Somali words like *bagaḍ*, 'girl' for Somali *gabaḍ* (*gabadh*), or *reeb*, 'cultivated field' for Somali *beer*. Other words are more difficult to explain, like *gastaḥ*, 'three' vs. Somali *saddeḥ* (*saddex*) or *din* fem., 'man' vs. Somali *nin* masc. Unlike the above low-caste jargons, even grammatical words undergo phonetic manipulation, such as *ḥamaa*, 'what?' for Somali *maḥaa* (*maxaa*), or *disee*, 'how?' for Somali *si-dee*.

Cerulli's Ḥ. may be a remnant group of the old Ḥ., that integrated into the Somali genealogical system, but kept a partially separate identity by developing a language of their own. Alternatively, they may be a group that made up its separate identity by adopting the name of the mythical Ḥ. and a new jargon. More field research both by anthropologists and by linguists is needed on this interesting group.

Giorgio Banti

Ḥarr Amba

Ḥ.A. (ሐር፡ አምባ; also Ḥaramba, Arramba, Arramba Qaläb) is the name of a mountain (↗*Amba*), situated north-east of ↗Ankobär on the road to Däbrä Sina, of a settlement on its top and the small area around it. Ethiopian traditions interpret the name as "the silk mount", recalling that since early times the place was used by Ethiopian rulers as a depot for silk (Gəʿəz: *ḥarir*; Amh.: *harir*, *harr*) garments (GueCopMen 58, n. 4). Ḥ.A. is located adjacent to an important trade route linking the province of Šäwa through ↗Harär with trade routes crossing the hinterland areas from the Red Sea, the gulf of Aden and the Indian Ocean.

Ḥ.A. is attested in sources as early as in the 17th cent., if Ḥar[r] Wägäb, mentioned in the Chronicle of *aṣe* ↗Susənyos (PerChron I, 285; cp. BTafA 400f.), is identical with it. Ḥarr Wägäb was one of the strategically important strongholds of medieval Ethiopia. This was where Wäldä Gäbrəʾel – a pretender who attempted to reign in Šäwa under the name of Tewodros Ṣäḥay – took refuge when pursued by *ras* ↗Səʿəlä Krəstos (his other fortress was the mountain of ↗Ǝmmä Məḥrät, not far from Ḥ.A.).

In the early 18th cent., *märəd azmač* ↗Səbəstyanos began the expansion of the Šäwan kingdom from his capital ↗Doqaqit in the direction of Ḥ.A. His son and the third ruler of Šäwa, *märʿəd azmač* ↗Abbəyye, established his capital there after winning the area from the ↗Oromo (elswhere it is said that H.A. was the capital already under Səbəstyanos, s. Moreno 1942:164). According to a tradition, in order to oust certain Karrayyu (↗Baarentuu) Oromo, who had settled on the top of the mountain, Abbəyye and one of his loyal servants put silks of various colours behind their residence and around the enclosure of their cattle. The next morning, the Karrayyu allegedly saw the display as a sign that "God" had sent forces to eliminate their cattle. They left Ḥ.A. for the Awaš valley, leaving the place for Abbəyye to occupy (Märsəʿe Ḥazän Wäldä Qirqos 1944/45). From Ḥ.A. Abbəyye launched a series of punitive campaigns against the Karrayyu and Abbičuu Oromo, in the highlands of Šäwa west of Ankobär.

Märəd azmač ↗Amməḥa Iyäsus left H.A. and moved his capital back to Ankobär. In the 19th cent., chiefly during the reign of *nəguś* ↗Śahlä Śəllase, Ḥ.A. played no important role except serving as one of the treasuries. In ca. December 1841 it was recorded as being under the authority of a certain Qälämäwärq, a chief responsible for the market revenues of Aləyyu Amba, Ankobär, Qʷəndi (Qundi), Däbrä Bərhan and Angoläla. The settlement continued to exist as a fortified village throughout the 19th cent., and was the birthplace and home of *aläqa* ↗Aṣmä Giyorgis Gäbrä Mäsih (BTafA 63f.).

Ḥ.A. is one of the three major political centres of Šäwa, along with Ankobär and Qʷəndi, where prominent notables, including some of the Šäwan rulers, have been buried. Abbəyye erected the church of St. Michael (AWTarik 82) in Ḥ.A. and reburied there the body of his father Səbəstyanos, having transported it from Ayne Maryam in ↗Mafud. Abbəyye himself was buried there in 1743. During the occupation of 1936–41 the church was burnt down by the Italians, who also massacred 24 leading members of the local clergy. The ↗*tabot* was saved by the church's *gäbäz* and kept in the *mäqaňňo bet*. A big religious ceremony is held there annually on 12 *Säne* – the feast of St. Michael – and the 12th day of each month.

Ahmed Hassen Omer

Harrington, John Lane

H. (b. 16 January 1865, Wales, d. 1927, Surrey) was a British military officer and diplomat who played a crucial role in Ethiopian affairs between 1897 and 1908. H. pursued a military career before becoming a diplomat. In 1895 he was appointed Assistant Resident and Vice-Consul at ↗Zaylaʿ on the Somali coast, and later at the post of Assistant Political Agent.

H.'s intimate association with Ethiopia had its roots in the 1897 British mission headed by James

Rennell Rodd (↗Rodd Mission) to the court of *aṣe* ↗Mənilək II. The purpose of the mission was to establish Anglo-Ethiopian relations (↗United Kingdom of Great Britain and Northern Ireland) in the interests of British imperial aims in the Nile Valley and the Horn of Africa. H. greatly facilitated the work of the mission and impressed Rodd, who later proposed that he be sent to Ethiopia as Britain's representative. In early 1898, H. was asked to become Britain's part-time representative in Addis Abäba, while retaining his functions in Zaylaᶜ. In late July, he returned to London and was appointed British Agent and Consul-General for Abyssinia and was asked to set up a permanent legation in Addis Abäba.

Although H.'s primary role was to protect and promote British interests, he also acted as an unofficial advisor to Mənilək. He staunchly supported the idea of Ethiopian independence. Between 1898 and 1902, H. was preoccupied with defining the Ethiopian-Sudanese border following Britain's conquest of the upper Nile Valley. This involved surveying the border and working out agreements with Mənilək and his government. H. was also involved in the negotiations over the southern border for a number of years, during which several survey parties were sent to delimit a possible boundary. Although H. succeeded in obtaining an agreement from the Ethiopian government in 1907 concerning the southern border, some details remained unresolved for many more years.

H.'s earlier efforts to promote British interests in the Nile Valley, Horn of Africa and Ethiopia itself made him extremely suspicious of the French, Britain's arch-rival in the region. The Tripartite Treaty of 1906 between France, Great Britain and Italy made H.'s anti-French position unwelcome to the British government, which needed France as an ally against Germany. H. was unable to adjust to this newer political reality. As a result, he fell out of favour after 1906, not only with his superiors in London, but also with the Ethiopians once they learned that they could no longer depend on Britain for protection from undue French influence. H.'s effectiveness in Addis Abäba greatly diminished after 1906 and in 1908 he retired to Surrey in England. He was knighted for his services in Ethiopia.

Pascal James Imperato

Harris, William Cornwallis

H. (b. 1807, Wittersham, Isle of Oxney, Kent, d. 1848, Surwur, India) was the leader of the first British diplomatic mission to ↗Šäwa. An engineer by profession, H. travelled to South Africa, and whilst there was appointed in 1841 British envoy to Šäwa. The move was in response to a letter from *nəguś* ↗Śahlä Śəllase to the British East India Company asking for help in the modernization of his country.

The envoy, who came with a party of 30 Englishmen carrying numerous presents, was, however, primarily interested in exploring the country, investigating the ↗slave trade and, in particular, persuading *nəguś* ↗Śahlä Śəllase to sign an agreement to open up his country to British commerce. Differences of objective between the two parties, and the envoy's arrogance, made the mission unpopular. It nevertheless remained in the country 18 months and signed an Anglo-Šäwan Treaty of Friendship and Commerce on 18 November 1841. By it *nəguś* Śahlä Śəllase agreed

Sir William Cornwallis Harris; oil on canvas; ca. 1823; attributed to Ramsay Richard Reinagle; courtesy of the National Portrait Gallery, London (Reg.-no. 4098) to allow British merchants to enter his country, to export whatever they wished without payment of tax and to import goods subject to duties of only five per cent. None of the treaty's clauses were ever implemented. The agreement, which was a calligraphic masterpiece, written in black and red, was, however, important as the first ever signed between Ethiopia and the outside world in modern times. It earned H. a knighthood in 1844.

H. subsequently wrote an account of his mission in his three-volume *Highlands of Æthiopia* (1844). This work, which was translated into German, is marred by its florid style, but was accompanied by an invaluable, today little known volume of illustrations. Johann ↗Bernatz, a German who accompanied the mission, also produced an illustrated volume *Scenes in Ethiopia* (1852).

The mission's reports, including much scientific material, are preserved in the British Library's India Office and Records. H.'s portrait as a young man (ca. 1823), attributed to Ramsay Richard Reinagle, is in the collections of the National Portrait Gallery, London.

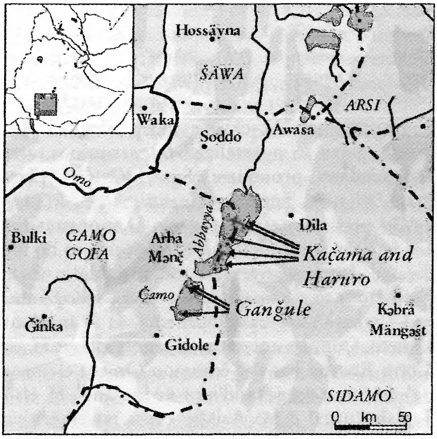
Harro

Harro language



H. (also Haruro) is a dialect cluster belonging to the East ↗Ometo family. These languages are found near or on the Lakes Abbaya and Čamo in southern Ethiopia. The terminology and exact membership of the cluster are unclear because of multiple older descriptions and the mobility of these peoples (s. a summary in Bender 2000:46 and the sources therein [mainly Brenziger 1995 and Siebert – Hoeft 1994], as well as the ethnologic sketches in this volume). Agreement in basic lexicon among named varieties of Gidiččo, Gaṣame, H., Gangule runs from 93 % (Gidiččo – Gangule) to 100 % (Gaṣame – Gangule). There are many variant spellings: e.g., Kačama, Gaṭame/Gatsʾame/Getʾeme for Gaṣame. The name *harro* and its variant *haruro* mean 'boat', a device of much use to these island-and-shore-dwelling peoples (Conti Rossini's "Haruro" may be identical to Gaṣame). A typical language self-name is *afan gidiččo*, using the Oromo form *afaan* ('mouth'), as is common in the area. Brenziger (1995:33) reports 150 H. and 1,006 Gangule. *Ethnologue* (1996:262) reports 550 Kačama-Gangule, of which 50 are Gangule, but this is superseded by the Brenziger study. There is no reliable estimate for the entire dialect cluster.

Linguistically, the H. cluster is in fact a part of the larger East Ometo family, having 83 % or more basic lexicon in common with Koorete and Zayse, but only 71 % in common with Zärgula. The segmental phonological inventories of H. languages are very similar to that of Koorete, but have not been reported in detail. In Bender 2000 (48f.) the inventory of Gangule (based on Fleming's 1971 unpublished notes) is as follows (marginal phonemes in parentheses):

Labials:	(*p̣*), *p*, *b*, (*ɓ*), *f*, *m*, *w*
Dental-alveolars:	(*ṭ-*), *ṣ*, *t*, *-ʦ*, *d*, (*-ʣ*), *ɗ*, *s*, *z*, *l*, *-r*, *n*
Palatals:	*č̣*, *-č*, *ǧ*, *š*, *-ž*, *y*
Velars:	*q*, *k*, *g*
Post-velars:	*ʾ*, *h-*
Vowels:	*i*, *e*, *a*, *o*, *u*, *ai*, *au*, (*oi*)

In the data set, /*ṭ-*/ occurs only in *ṭansa* ('breast'), /*-ʣ*/ only in *hayʣ*(*i*) ('three'), /*-ž*/ only in *naž* ('child'). There are positional restrictions, e.g., /*h-*/ is initial only, /*-č*,*-r*,*-ʦ*/ are non-initial. Information on suprasegmentals is lacking, but at least one degree of accent is probable.

Canonical word order is Subject–Object–Verb as in all Omotic languages. A sample of H.-cluster basic lexicon follows (normalized transcriptions from several varieties):

‘one’	*biiz+o*	‘moon’	*agun+a*
‘two’	*namʾ+*	‘sun’	*aw+á*
‘three’	*haiʣ+*	‘blood’	*suʦ+*
‘fire’	*tam+a*	‘tongue’	*inṣúr+e*
‘water’	*wáaṣ+*	‘tooth’	*gagg+o*

Some common H.-cluster morphological elements, given in normalized transcriptions, are: Independent pronouns: Sg. 1st/2nd/3rd pers. masc./3rd pers. fem.: *tana/nena/esa/iso*, Pl. 1st/2nd/3rd pers.: *nuna/inina/usuna*. Demonstratives are unclear, but near/far *ha-/se-* seems to be indicated. Interrogatives are too variable in their elicitations to summarize, but *oone* (‘who?’) and *ay+* (‘what?’) are basic elements, as in most of Ometo. Copulas are not well reported, but H. of Conti Rossini has the common Ometo element *deʾ-* for most usages and *na ~ ne* for ‘and’. H. also has the usual Afro-Asiatic causative/transitive verbal suffix *-s* and passive/transitive *-t*.

M. Lionel Bender

Harro ethnography

The H. cluster consists of the peoples of Gangule, who live on the islands of Dana and Gangule near the north-western coast in Lake ↗Č̣amo, as well as on the island Dano close to the south-western coast; Kač̣ama and Haruro, who inhabit the islands of Lake ↗Abbayya (the latter two are also often used as synonyms). According to a few receipts and surveys, these three populations share the same language and culture.

Gangule are also referred to as Gerğo or Gaṭama by the people living on the mainland like Guğği, Amarro and Done. According to Haberland (VSAe II, 682), the Kač̣ama as well as the Guğği (who live east of the lakes on the mainland) call the whole Lake Č̣amo “Gangule”.

Kač̣ama and Haruro inhabit a village called Haruro on the island of ↗Gidiččo, the inhabitants of which are also called “Gaṭame” (or “Gaṣame”). Unseth (1990:80) identifies “Kač̣ama” as the ancient name for Haruro, which is, according to Haberland (VSAe II, 682), the name given to the “Gaṭame” by the Wälaytta, Gamo and Amarro.

The Summer Institute of Linguistics (S.I.L., s. Grimes 1996) classed the Gangule among the Kač̣ama – Gangule cluster. Their counting published in 1995 resulted in 500 Kač̣ama and only 50 Gangule. The Ethiopian Population and Housing Census of 1994 counted 1109 Gangule and 2643 Kač̣ama. Haberland (VSAe II, 681) expresses doubt whether Haruro, Gaṭame and Gangule really designate one single ethnic group, but he is sure of their sharing the same culture.

All islands in lakes Č̣amo and Abbayya are rather small and mountainous, Gangule itself appearing as a very steep and high rock. The numerous fields are laid out in terraces and many of the inhabitants work additional fields on the mainland. Here, on the west shore of Lake Č̣amo, they have constructed a village which S.I.L. identified as being called Šela-Mela. Early travellers have noted Gangule and Gaṭame as being very well-known among all their neighbouring groups for their fishing, for which only fishing-rods are said to be used while nets do not seem to be known. The fish caught are dried in the sun or roasted between hot stones. Gangule and Kač̣ama are equally known for hunting hippopotamus, which they do in groups with harpoons. The animals are cut and skinned directly on the lake, and the pieces of meat laid in the boat to be taken to the village. The thick skin is traded to neighbouring peoples, who work them into shields. According to Vannutelli and Citerni (1899:242) and Parenzan (in Brunelli et al. 1941: 119), the Gaṭame hang the testicles of killed hippopotami on the prow of their boats, as well as the tails of the female animals. The inhabitants of Haruro on Gidiččo are, like Gaṭame and Gangule, but unlike the rest of the inhabitants of Gidiččo, fishermen and hippopotamus hunters. They are said to sell the meat in markets to the Gedeo and the skin to tanners, as only a few men tan the skins themselves.

Nicole Poissonnier

Ḥasän ᶜAli

Däğğazmač Ḥ.A. (**ሐሰን፡ ዓሊ**, Arab. حسن علي, Ḥasan ᶜAlī; b. 1883, ᶜAddi Ḥannəs [Yoḥannəs], Märagʷəz district, Säraye, Eritrea, d. 1968) was an interpreter, civil servant in the Colonia Eritrea and a prominent politician. He was born to a ↗Ğäbärti Muslim family. His parents died when he was about seven. With the help of relatives, Ḥ.A. left for ↗Asmära, where he found a job in the Department of Post and Telegraph. There, he had an opportunity to learn foreign languages. Thus, in addition to his mother tongue Təgrəñña, he soon mastered Italian, Arabic and Amharic (ErDizBio 162), and later also learnt Təgre, English and French. An autodidact, he attended no language classes other than Italian courses in Bäläza and Sägänäyti. Thanks to his extraordinary abilities, he was recruited as interpreter in the Massawa *commissariato* in 1907, to be transferred a year later to the central government headquarters in the Political and Civil Affairs Department, in Asmära.

During his service, Ḥ.A. was attached to a number of missions. From December 1910 to December 1911, he worked with Captain Carlo Citerni in the mission to delimit the borders between Ethiopia and ↗Italian Somaliland (↗Boundaries). In August 1926 he participated in the mission lead by Jacopo ↗Gasparini to sign the Treaty of Friendship and Commerce between the Yemen and Italy. In February–May 1913, he served as interpreter in the Italian consulate in Ḥudayda, the Yemen; in July–November 1947, he worked as special class interpreter and translator at the Italian consulate in Ğidda, Saudi Arabia. Besides, he participated in a number of other missions on different occasions as a local dignitary of the Italian colony of Eritrea: to the Emirate of Assir (1932), Italy (1927, 1938) and Ethiopia (1939).

During Ḥ.A.'s over-four decades of service, Italian colonial authorities gave him the following titles: *blatta* (1912), *fitawrari* (1919), first class judge (1929), *azmač* (1931), *däğğazmač* (1936), head of notables (1937) and *commendatore* (1939) – a special title awarded for civic merits in Italy. In November 1939, he was appointed *capo rione* ('town chief') of the 2nd town quarter of Asmära, inhabited predominantly by Muslims (NadEr 39; ErDizBio 162), a post he retained throughout the ↗British Military Administration period (British Archives 1950, 2).

In the 1940s, acting as a politician, Ḥ.A. was head of two important institutions: the Islamic Relief Association (العمدية الخيرية الاسلامية, *al-ᶜAmdīya al-ḫayrīya al-islāmīya*), founded on 30 July 1937 to aid needy Muslims, with its offices in Asmära and Massawa; and the Arabic Colony (الجالية العربية, *al-Ğālīya al-ᶜArabīya*), the Arabic school in Asmära (renamed later *al-ᶜĀmm*), founded in 1942 by the Egyptian government to cater for the educational needs of the Arab community in Asmära and of Eritrean Muslims. The first head of the school, ↗Ibrāhīm al-Muḫtār, was directly responsible to Ḥ.A. (Muḥammad Ṭaha Tawakkal 2003).

In the 1940's, Ḥ.A. was one of the founders of the ↗*Maḫbär fəqri hagär* (1941) and of the ↗Moslem League (1946). Advocating Eritrean independence, he enjoiyed great popularity and political influence ("among both Moslems and Copts", British Archives 1950:2). This explains why he was one of the primary targets of unionist terrorist acts: in 1946–48 in six attempts on his life, he narrowly escaped death twice (ᶜAlämsägäd Täsfay 2002:170; interview with Maryam Ḥasän, 2005); it is remembered that on one occasion his house, then on the outskirts of the city, was guarded by volunteer youths for as long as six months.

During the ↗Ethiopian–Eritrean Federation, he remained in his administrative post until he was appointed by Ḫaylä Śəllase I Ethiopian ambassador to the ↗Yemen in 1955.

Kebre-Ab Tesfaí

Ḥasan b. Aḥmad

Ḥ. (حسن بن احمد, ᶜAfar: Ḥasan b. Ḥamad) was a *sulṭān* from the Ankālá tribe, with his residence in Meḍgebḍa, 13 km south of ↗ᶜAsab. Together with his brother Ibrāhīm b. Aḥmad and the "*sulṭān* of Buyya" ᶜAbdallāh b. Šeḥem, also of Ankālá descent, Ḥ. negotiated the purchase of the ᶜAsab coast by Giuseppe ↗Sapeto.

A first agreement (15 November 1869) included a small stretch of land from Ras Luma (Lōma) to the little hill of Ganga (273 m A.S.L.), a few miles in the interior. A second negotiation (11 March 1870) extended the area from Ras Luma to Buyya (the cape immediately to the south of the town of ᶜAsab of the Italian period) and Ganga. A third negotiation (15 May 1880) between Sapeto, Ibrāhīm and Ḥ. included the coastal stretch from Ras Luma to Ras Darma (Ras Tarma on the maps, east of Baylūl), with the island of Sanabour (Sanaᶜbūri), to the north of ᶜAsab.

Didier Morin

Ḥasan b. Aḥmad al-Ḥaymī

Ḥ. (الحسن بن احمد الحيمي, al-Ḥasan b. Aḥmad b. Ṣāliḥ b. Duᶜayš b. Muḥammad b. Ḥamza; b. 1017 H. [1608 A.D.], Ḥayma, near Kawkabān, north-west of Ṣanᶜāᵓ, Yemen, d. 1070 H. [1659/60 A.D.]) was a Yemenite author and traveller, known for his *Sīrat al-Ḥabaša* (DonHaySirat).

Ḥ. wrote poetry and a polemic in defence of the Law-school of the Zaydī *imām* al-Mutawakkil ᶜalā Allāh Ismāᶜīl (r. 1644–68; Brockelmann 1937–42, S II, 550f., no. 7). A devout Muslim, Ḥ. performed the *ḥağğ* three times and followed Islamic food prescriptions even when travelling to Ethiopia. He also was sent to ↗Ḥaḍramawt to settle differences between the rulers of the Āl-Kaṯīr (Serjeant 1963, index).

Ḥ.'s journey to Ethiopia resulted from an initiative of *aṣe* ↗Fasilädäs, who between 1642 and 1647 entered into correspondence with the *imām*. In the end the *imām* sent Ḥ. to find out whether the Christian ruler wanted to embrace Islam. The envoy left the *imām*'s residence at Šahāra on 4 July 1647 with an escort consisting of 22 troops, twelve of them musketeers. Via Ṣanᶜāᵓ, he travelled to Muḫā, from where he sailed in two days to ↗Baylūl, ruled then by *sulṭān* Šuḥaym b. ↗Kāmil ad-Dankāli. *Sulṭān* Šuḥaym accompanied Ḥ. with some 30 people, together with some 30 Ethiopian merchants, all under constant fear of being attacked by the Oromo, against whom muskets proved to be effective. A message was sent to *bäᶜalä gada* Aḥada Anbäsa, the Ethiopian governor of ↗Əndärta who resided at Anṭalo (in Arab. sources Ḥinṭālū; CRHist vol. 2, 186). An answer to the message was found in ᶜAynamalī, perhaps identical with Ayne-Mela, at or near Korbeta, north of Lake Ašangi (CrawItin 73; *Guida* 310). In Anṭalo the *kabīrī ṣāliḥ*, local Muslim jurists, came to see Ḥ., who had a letter and garments for them from the *imām*. Yəsḥaq, the governor of Ṣähart, accompanied the caravan with an army of about 2,000 men as far as Abärgälle (Conti Rossini 1904:189–93), whose governor Qabā Qusṭūs (Qawəsṭos?) came to meet them. They crossed the river Täkkaze and arrived at the Səmen, whose governor Damūh – probably *abeto* Damo (GuiIohan 20, 27, 32) – was living at the King's court. The caravan entered the Amhara region and came to a Muslim village near ↗Gondär (probably Əslam bet). On 18 March 1649 they arrived at the new capital and faced hostility. The Christian companion of Fasilädäs's envoy to the *imām* had warned the inhabitants that a Muslim was about to arrive, intending to convert the Emperor to Islam. The Muslim messenger to the *imām*, *al-ḥāğğ* Sālim suggested that Ḥ. change the wording of the letter, which was not sealed, but the Yemenite did not see any reason for alarm. In a place near Gondär, perhaps ↗Ənfräz, due to court intrigues Ḥ. had to wait for two days before getting the Emperor's permission to enter the capital.

In the newly built castle at Gondär, Ḥ. saw beds from Istanbul, mattresses from India glittering with gold, sofas inlaid with pieces of jewelry and gems, gowns of silk brocade embroidered with gold, golden girdles set with beautiful stones and precious gems and swords from Sənnar inlaid with the choicest pure gold. He also noted the tall Ethiopians with their frizzly hair, uncovered heads, golden bracelets and pendants adorned with pearls.

Ḥ., who stayed with his party in the house of the minister Ḥawarya, had three audiences with the Emperor, two in public and one in private. His interpreter, Muḥammad Mūsā, a descendant of al-Ḥusayn b. ᶜAlī, who spoke Arabic fluently, was a renegade from Islam. The Emperor honoured the Muslim from the Yemen by stepping down from his throne and sitting on the floor and saw to it that the Yemenites were well provided with wheat, sheep, goats, cows, honey and butter.

During the third audience Ḥ. knew that the Emperor's secret intention was not to embrace

Islam, but to open a new trade route to Baylūl, the only port on the Red Sea that was independent from the Turks. Wishing to leave via Massawa as soon as possible, he was kept for more than nine months by the Emperor, who wanted him to return via Baylūl. Ḥ., notwithstanding the enmity between the Yemenites and Turks, requested the *imām* to ask the Turkish *paša* of Massawa and ↗Sawākin for a safe-conduct for Massawa. At Gondär he met *amīr* ʿAbdalwahhāb, an Arabic-speaking inhabitant of Sawākin and envoy of the *paša*, whose purpose was to find out why the Yemenite had come via Baylūl and not via Massawa. The *paša* was fearing a diversion of trade from Massawa to Baylūl. In a state of drunkenness, the Emperor would have agreed with the departure via Massawa, and Ḥ. was assisted by ʿAbdalwahhāb in approaching the *paša*.

In his account, Ḥ.'s judgement of the Ethiopians is rather unfavourable. They lack a man's good qualities (Arab. *murūʾa*), are mean and greedy. These bad characteristics are not due, he remarks, to their being Christians. He also gives insight into the situation at the court of Gondär around 1650. A religious scholar himself, Ḥ. wanted to be informed about the Book and the religious laws of the Ethiopians. But the monks, the only people thought to be able to give that information, were ignoramuses. More positive were his contacts with the pupils of *abunä* ↗Marqos. He went to see them in the pleasure-grounds where the *abun* used to go, perhaps Qäha Mankil near Qʷəsqʷam (*Guida* 356f., 360f.). He made friends with their superior Ḥāṭirūs, who had also been Marqos's pupil, though censuring him scathingly for his conduct. Ḥāṭirūs, who, as he spoke Arabic, may have been an Egyptian Copt, showed great interest in Islam and desired to accompany Ḥ. to the Yemen. For ten days the *faqīh* studied what he calls the first three volumes of the Gospel in Arabic, but did not find anything that came near to the prescriptions of ↗*šarīʿa*.

The stories of *abunä* Marqos and *abeto* ↗Gälawdewos were known to Ḥ. before his arrival in Gondär. They had raised hopes that the Emperor might be interested in Islam, but the good prospects had turned out to be an empty promise. Two daughters of a Muslim woman who had become a Christian had been brought to Ḥ.'s house by the woman's sister. When no reaction came from the Emperor or his ministers, Ḥ. sent the girls to their father in Massawa through the good services of ʿAbdalwahhāb.

On 16 December 1648, Ḥ. finally was able to leave for Massawa. The halting-places of the return journey are not mentioned in Ḥ.'s travel account, but they may have been more or less the same as those of von Heuglin (1868:157, map). During Ḥ.'s stay of ten days in ↗Dəbarwa, the governor of Sähart was dismissed so that no escort could be given for the final leg of the journey. Half-way between Dəbarwa and Massawa the caravan was attacked by Christian nomads, who were checked by the muskets. They dispersed when information came that a hundred Turkish troops with 50 muskets were on their way. In Massawa, Ḥ. was received with great honour by the local ↗Balaw ruler, who since 1650 acted as deputy or *nāʾib* of the Turkish *paša* (DonMurad 218, n. 111). Having survived a heavy storm between the ↗Dahlak Islands and al-Luḥayya, Ḥ. reached Šahāra on 18 March 1649. He finished his travel account in Kawkabān on 8 August 1650.

Emeri van Donzel

Ḥasän Ǝngamo

Imām Ḥ.Ǝ. (b. Ǝnnämor, d. August [?] 1889, Säba, Qabeena) was a Muslim ↗Hadiyya leader. His mother was a ↗Gurage and his father, Walga Moče, was a leader of the Hadiyya in ↗Ǝnnämor. With his group, Walga had migrated to Zäna Bänär, where, in the 1830s, together with two Muslim Gurage (s. also ↗Səlṭi) followers, Umar Bekesa and Ali Dänäbo of Čaha, he founded the Muslim petty-state of ↗Qabeena. For strategic reasons, Walga made Umar Bekesa *imām* of the new state, whilst himself remained his assistant and spokesperson among the predominantly Hadiyya-speaking community.

During his childhood, Ḥ.Ǝ. studied in Ǝnnämor in the mosques founded by his father, and later in Qabeena and at Ambälta in ↗Wäläne, where his teacher was the famous *šayḫ* Abdälaziz. Ḥ.Ǝ. was married to a step-daughter of Ali Dänäbo in Ambälta. On his father's death, Ḥ.Ǝ. succeeded him as Umar's spokesperson. During Ḥ.Ǝ.'s 30-year long office, the Qabeena state was consolidated. Through the active participation in both the east-west and north-south axis of major long-distance trade, it became one of the most important commercial centres of the country. Ḥ.Ǝ. also promoted ↗Islam opening new mosques and schools and attracting new teachers. Qabeena emerged as an important regional Islamic centre, with strong ties with other centres of its like.

Umar Bekesa's harsh rule arouse discontent among the Hadiyya. His agreement, in 1875, to pay an annual tribute to the Christian state in the person of *nəguś* Mənilək of Šäwa (later *aṣe* ↗Mənilək II), for which Umar received the title of ↗*däǧǧazmač*, was interpreted as a betrayal of Islam, and Ḥ.Ǝ. launched a resistance campaign. In organizing his movement, Ḥ.Ǝ. used Qabeena's long-established religious and commercial ties to Islamic areas, including Wäläne, Wällo, Ǧimma and Arsi, and even the Sudan. His former teacher *šayḫ* Abdälaziz played an important ideological role during the campaigns. Ḥ.Ǝ. was considerably inspired by other Islamic regions. In 1878, escaping *aṣe* ↗Yoḥannəs IV's decree of forced conversion to Christianity, a great number of Wällo Muslims led by *šayḫ* Ziyin moved to Qabeena. Other routes also played an important role, such as the Sudan via Ǧimma. One *sayyid* Tayyibe, presumably a Sudanese ↗Mahdist official, sent "a letter and spear" through a messenger called Muḥammad Tahera (a Hadiyya, then residing in Sudan) to Ḥ.Ǝ., asking him to wage wars against "infidels" in Ethiopia as the Mahdists did in Sudan. Ḥ.Ǝ. went to Wäläne to discuss this message with *šayḫ* Abdälaziz and *šayḫ* Ziyin, which resulted in an agreement to wage a *ǧihād*. Imitating Prophet ↗Muḥammad's flight from Mecca to Medina in 622, the three leaders and their followers went on a *ziyāra* ('pilgrimage') to the hill of Garbaǧa, an act that marked the beginnings of such holy wars.

In 1878, Ḥ.Ǝ. led an uprising against Umar, who, accompanied by ca. 500 fellow Gurage, fled to Yäšähara in Aklil. The Hadiyya destroyed his houses at Moǧar and confiscated the possessions of his followers. A year later, Umar, supported by the Gurage from Aklil, Muḫər, Gumär, Čaha and Wäläne, attempted a backstroke but was defeated. Ḥ.Ǝ.'s victory ensured him an unchallenged position as head of the Qabeena state.

Subsequently, Ḥ.Ǝ. organized a revivalist movement aiming at the purification of Islam – which he considered to have been adulterated by Umar Bekesa – its protection from the imperial expansion of Christian Šäwa and the establishment of an Islamic state. Immediately after the foundation of the Mahdist movement in 1881, he started campaigns among the neighbouring Oromo and Gurage groups of Amaya, Wälliso and Nadare, as well as Wäläne and Soddo, who had recently been made tributaries by Mənilək. The latter, having failed to tame Ḥ.Ǝ. by diplomatic means (e.g., an offer of the provinces beyond the Awaš river), sent troops under *qäññazmač* Wəbe Argäno, *däǧǧazmač* ↗Wälde Aššagari and *baša* Habtä Śəllase to fight the Muslim leader. However, Ḥ.Ǝ. emerged victorious and expanded his religious campaigns to *Säbat bet* Gurage areas. Starting at Mäqorqor, his troops moved to Aklil, where Umar Bekesa finally submitted to Ḥ.Ǝ., joined the movement and became the second leader of the campaigns. Soon, nearly all (sub-)groups of the *Säbat bet* embraced Islam without much resistance, whilst Ḥ.Ǝ.'s forces destroyed shrines of traditional deities and churches.

Only Saramo Gačeno, who worshipped ↗*Waq* (the sky-god) of Čaha, offered resistance to Islamic conversion and was killed in public by the *ǧihād* warriors at the village of Yabäze. The resistance of the Christian ↗Muḫər was better organized, both sides suffered considerable losses in the battles of Ečäne and Yaminan in Muḫər. In the end, the Muslims were victorious and destroyed Muḫər properties.

The huge Hadiyya–Gurage *ǧihād*, which by then had also ties with other resistance movements to Mənilək's expansion (e.g., Arsi Oromo), was attacked in 1886 and 1888 by the troops of *däǧǧazmač* Wälde Aššagari, resulting in a new Muslim victory at Wälliqo. Mənilək then sent his largest force under the command of *ras* ↗Gobanaa Dač̣i who in 1889, at the battle of Ǧäbiddu Meda (BrHad) near Wäliso, defeated the Muslim coalition forces. Ḥ.Ǝ. escaped to Ǧimma and on his way back, crossing the Gibe gorges, was infected by malaria. He died shortly after at Säba and was buried there at his family's graveyard.

Ḫašəngä

Ḫ. (ኃሽንገ, Amh. Ašange) is the largest freshwater lake in northern Ethiopia (15 km²). It lies in the south-eastern part of Təgray north of ↗Koräm in ↗Wäǧǧärat, among mountainous chains, close to the ancient trade routes linking Təgray with Lasta, Wag and Amhara. In 1867/68 the ↗Napier Expedition passed by Ḫ. and established a temporary camp there (at the southern border of ↗Ambalage under the local governor ↗Wäldä Iyäsus, Kaśa Ḫaylu's rival, who temporarily caused supply problems to Napier).

Modern geological research carried out at the Ḫ. sediments produced extensive data on climate change since Late Pleistocene / Holocene, the period of ca. 10,400 to 6,800 years ago having been stable, warm and wet, followed by a dry period (starting from ca. 2,900 years ago "with some signals of wet pulses", Zelalem Kubsa 2005).

Hāšim

Walī H. (هاشم) was a Haräri saint whose tomb is venerated some kilometres north of Harär on a river-bank near Nazaro. In that place there was once a village named Walī Hāšim, now abandoned. In several documents, however, it is mentioned as the place where the last ↗Walašmaʿ *sulṭān* of Harär, Ḥabīb b. ʿUmardīn, was killed by the Ethiopian general ↗Ḥamälmal in 1559. This means that *walī* H. must have lived before that date.

In some sources, as well as in part of the secondary literature, *walī* H. is confused with the scholar *šayḫ* ↗Hāšim b. ʿAbdalʿazīz b. *amīr* Hāšim. For instance, a legend in Leslau (1965: 204ff.), dealing with the latter *šayḫ* Hāšim, seems in fact closer to the figure of *walī* H. Such a legend tells that in his youth he was asked by his mother to cut firewood in the mountains, just as his brothers did. He loaded the wood on an elephant, tying it up with snakes. When his mother and brothers saw this they became frightened. From then on they never asked him to work again so that he became free to read the *Qurʾān*.

Hāšim b. ᶜAbdalᶜazīz

Šayḫ H. (هاشم بن عبد العزيز, full name: Abū ᶜAbdallāh Hāšim b. ᶜAbdalᶜazīz b. *amīr* Hāšim al-Muḥammadī aš-Šāfiᶜī al-Ašᶜarī al-Qādirī al-Hararī, b. ca. 1711, d. ca. 1765) was a grandson of the Haräri *amīr* ↗Hāšim b. ᶜAlī b. Dāᵓūd. In spite of his noble descent, H. preferred to lead a scholarly career. He became a *šayḫ* of the Qādirīya brotherhood (↗Islamic brotherhoods), publishing his spiritual ancestry (*silsila*) in a special pamphlet (Wagner 1997:10f., no. 8). As can be gleaned from his name, he was dogmatically an Ašᶜarite who followed the Šāfiᶜite school of law (↗Šarīᶜa).

Šayḫ H. was a prolific writer. The most prominent of his works are the *Muṣṭafā*, of which two versions in ↗Harari are known, and the Arabic *Fatḥ ar-raḥmānī*. They contain prayers and praises of the Prophet ↗Muḥammad (*taṣliya*), which are still often recited in ↗Harär. Both works have been printed. Several other works of his exist, in print or as manuscripts, or are at least known by the title. Their contents are very similar to those mentioned above.

Šayḫ H. died in 1765 or some years later (Drewes 1983:71). He was buried in the cemetery of *āw* ↗Aḥmad ᶜIzzīn near the gate called Assum Bari in Harär, where his tomb is still extant. Moreover, he has a *zikri bēt* inside the town, near the Erer Gate or Argob Bari.

Šayḫ H. is often confused with *walī* ↗Hāšim, who lived two centuries earlier.

Hāšim b. ᶜAlī b. Dāᵓūd

H. (هاشم بن علي بن داود; d. 10 February 1671, r. 1662–71) was the second *amīr* of the ↗ᶜAlī b. Dāᵓūd dynasty in ↗Harär. He was one of the ten sons of ᶜAlī b. Dāᵓūd and succeeded his father on his death on 23 November 1662. Little is known about his reign. In 1671, the ↗Arsi Oromo attacked Harär. At the battle that took place in Eğu, between Dərre Dawa and Kombolča, H. was killed. He was succeeded by his brother ᶜAbdallāh b. ᶜAlī b. Dāᵓūd. H. was also the grandfather of the scholar *šayḫ* ↗Hāšim b. ᶜAbdalᶜazīz b. *amīr* Hāšim.

Ḥasōba

Ḥ. (ᶜAfar: Ḥasōbá or Ḥassōbá) is an ↗ᶜAfar subgroup and part of the ancient Wēᶜima coalition. Its territory lies within Djibouti and Ethiopia, on the south-western edge of the ᶜAfar area. West of ↗Obock (Djibouti), the Ḥ. have a chiefdom called Kōná ᶜElih Buḍá ('the house of the five wells'), a confederation of five local tribes. In Ethiopia, in Mullu, on the eastern edge of Ifat, the Ḥ. are also associated with other ᶜAfar groups, such as the Tákᶜil in Kurbíli.

The genealogical link between the Ḥ. and the ↗Sāho (↗Ḥazo) indicates an ancient influx of elements from the territory of modern Eritrea. Another tradition says that the ancestor of the Ḥ. was a Yemeni named Yaᶜqūb of the Ṣabbīya tribe, who was buried in Ras ᶜĀra between Sheikh Said and Aden. According to this tradition, the name Ḥ. is derived from the root *ḥ-s-b*, 'idea of good origin'. Four of Yaᶜqūb's descendants crossed the Red Sea. Two of them settled in the area of Obock; one of them died and the other became the ancestor of the Ḥ. of the Mabla mountain (Ḥasōbá Sek-Arbāhinto). The two others went to ↗Tağūra, where the *sulṭān* gave them lands on the Goda mountain. The group, which settled in Ambabbo on the coast, had the same Yemeni ancestor as the Ḥ. of Mabla, is, however, considered as coming from Ethiopia and of lesser prestige. The Ḥ. of Goda are collectively called Dīni-Ḥummaddo or Yaᶜqubto. Their ancestor, Dīni b. Ḥummad (Aḥmad), left for Ethiopia during a time of drought, ca. 1650. One of his descendants, Muḥammad "Tamboyta", came back to the Goda (1760). He is the great-grandfather of ↗Abū Bakr Ibrāhīm Šaḥīm.

Didier Morin

Hassəbe Bähabte

Näggadras H.B. (**ሀሰቤ፡ በሀብቴ**, also **አሰቤ**) was a member of an important family from Šäwa who became established in power in ↗Harär during the governorship of *ras* ↗Mäkʷännən Wäldä Mika'el. Like his father Bähabte and his two brothers Yəggəzu and Ṭänna Gaššaw, H.B. held high positions in Harär. First, in 1909 he was *balambaras* and Director of Customs and in 1910 was appointed *näggadras*. He held the latter position until 1912 when he fell from power after the death of *ras* ↗Täsämma Nadäw and the fall from grace of *ras* Abatä. He was later reinstated as *näggadras* of Harär and removed for a second time in 1918. Thereafter, his fortunes probably continued to rise and fall with the prestige and power of his more famous brothers.

Peter Garretson

Ḥaṣurä mäsqäl

Ḥ.m. (**ሐጹረ፡ መስቀል**, 'Rampart of the Cross') is the general title of a group of Gəᶜəz "canonical" magic texts (according to the classification by Strelcyn 1960) that glorify and praise the Cross (↗*Mäsqäl*). Next to this group, some similar texts such as the litanies published by Grébaut (1935, also entitled Ḥ.m.), the *Wəddase mäsqäl* 'Praise of the Cross' or the *Wəddase wägənay lämäsqäl* 'Praise and homage of the Cross', are equally known for that matter, yet with more pronounced liturgical character (Lifchitz 1940:87ff.).

The average Ḥ.m. texts have the form of hymns or long prayers (mostly ascribed to the Prophet Jeremy) with distinctive protective features, due to the power of the magical names and formulas they include, against all sort of evil and enemies. Usually, those texts are meant to limit or undo the destructive spell of Satan (↗Devil). In amulets and ↗magic scrolls (where the aforesaid litanies are also reproduced), the longer Ḥ.m. prayers (sometimes exceeding 10 folios in mss., s. Lifchitz 1940:92-147) appear in shorter versions, often detectable from the introductory words, **ጸሎት፡ በእንተ፡ ሐጹረ፡ መስቀል**... (*Ṣälot bä'əntä ḥaṣurä mäsqäl*..., 'Prayer for the rampart of the Cross...'), as well as by the subsequent mention of the ↗demons and ↗diseases against which the possessor of the amulet is to be specifically protected by the Ḥ.m.

In literary terms, the Ḥ.m. texts are composed of lines or verses, each containing the word "cross" followed by a list of the latter's attributes or beneficial actions. Parallels are known in Greek and Nubian, where a "Stauros-Text" survives that is a version of the sermon "In venerabilem crucem" wrongly attributed to ↗John Chrysostomos (CPG III, no. 4525; Browne 1984, 1998; for other versions, including Gəᶜəz, cf. Proverbio 1998:75). Although there is no special study in this respect, a few of the texts gathered now under the title Ḥ.m. could really go back (via Arabic?) to a Greek original – as in the case of the Nubian sermon "In venerabilem crucem". On the other hand, manuscript evidence of Ḥ.m. prayers dating back to the 15th cent. suggests that these texts may have enjoyed a particular favour and/or may have been composed in that period, as a reaction against the ↗Stephanites' rejection of the cult of the Cross (Conti Rossini 1941:213).

The apotropaic function of the sign of the Cross in Ethiopian popular beliefs, as well as the established cult of the Cross, played an important role in the development, diversification and spread of this kind of literature. Ḥ.m. texts are common in any collection of Ethiopian scrolls: e.g., among the 652 items of the Sandro Angelini Collection, Bergamo (one of the biggest collection of Ethiopian magic scrolls in the world), there are no less than 157 Ḥ.m. texts (cf. Raineri 1990:315).

Ḥatäta Zärʾa Yaʿəqob

The Ḥ.Z.Y. (**ሐተታ፡ ዘርአ፡ ያዕቆብ**, '[Philosophical] Inquiry of Zärʾa Yaʿəqob') is a ↗Gəʿəz treatise on God and his nature purportedly written by a certain Zärʾa Yaʿəqob in 1667; a continuation of this text, with a more pedagogic and parenetic character, is known under the name of his pupil Wäldä Ḥəywät, who records the death of his master in 1692.

The author of the Ḥ. claims to have been born in Aksum in 1599 and to have pursued his studies in the traditional Ethiopian schools, studying the ↗Psalter and especially the ↗*qəne* technique and ↗exegesis. During the persecutions by *aṣe* ↗Susənyos, he would have managed to escape from Aksum, taking his Psalter with him and then sheltering for two years in a cave. There, in peace and solitude, far from conflicts among humans, he elaborated his philosophy – a form of rational knowledge of the existence of God and of his relationship to man.

Such an unusual "theological" approach and the relevant discussion of religious matters, departing from all known works of ↗Gəʿəz literature, prompted modern scholars to conclude that the author of the treatise was not an Ethiopian, but a Catholic missionary who had to hide his opinions: according to Conti Rossini (1920), followed by Guidi (1932:77 and n. 1), it was Father Giusto da ↗Urbino in the first half of the 19th cent. What can be objected, suggesting a late 18th-cent. date for the composition of both works, is that the author's education does not go beyond the elementary grade of a *qəne* school: in fact, the language of the Ḥ. is rather poor for such a connoisseur of Gəʿəz as Giusto da Urbino, nor does the text show any acquaintance with ideas traditional Gəʿəz literature.

In spite of the scepticism of modern scholars, an attempt at re-establishing the authorship of the Ḥ.Ẓ.Y. and its continuation as original works of Ethiopian philosophy, in no way elaborated from foreign sources, has been made by Sumner (1985:224–29, with detailed summary of his argumentations).

Claude Sumner

Ḥatäz

Ḥ. (**ሐተዘ**) is the conventional form of the name of a Christian king of ↗Aksum toward the end of the 6th/beginning of the 7th cent., for which a vocalization *Ḥetaza is however suggested by its Greek rendering: ΗΘΑΖΑ, i.e. Ἡθαζα, *Hēthaza* (cp. Godet 1986:198). The name Ḥ. has been unduly connected with Gr. Ἀθαθ, *Athath* of 1 Chr 4:13 (actually *Atat* in the Gəᶜəz Bible), and therefore considered to be a biblical one (Altheim 1967:508; Hahn 1983:141f. and 2001:126f., fig. 6; Lusini in StAeth 68 and n. 5; but s. Godet 1986:198). Possibly a successor of ↗Gersem, Ḥ. may well be the "king" mentioned in the Arabic *Annals* of aṭ-↗Ṭabarī as the father of *nəguś* ↗Ǝlla Ṣaḥam, who ascended the throne before 622 A.D. The latter's patronymic *ʾbn ʾbğr*, as it is in the text edited by de Goeje (1881-82:1569f.), has been amended to *ʾbn ʾl(ʾ)ğbz* by Hartmann (1895:299f.), with reference to *nəguś* ↗Ǝlla Gäbäz. Yet, the clearly corrupted *ʾbn ʾbğr* can better be interpreted as *ʾbn ʾlḥtz* (a reading distinguished from Hartmann's by diacritical dots alone), i.e. *ibn *Al(l)a* [= Gəᶜəz *Ǝlla*] *Ḥataz*(*a*) or just *ibn *al-Ḥataz*(*a*), with added Arabic article [< *ibn *Ḥataz*(*a*)]. This would establish a more precise chronology for Ḥ.'s tenure, as well as for his ↗coinage (of which very few perfect specimens survive), sometime divided between two different rulers, "Ḥ. I" and "Ḥ. II" (Anzani 1926:41f., 90f., 93f.; cp. Pankhurst in DicEthBio 83f., and SerHist 202), but listed under one single reign in recent studies (s. Munro-Hay – Juel-Jensen 1995:245–53).

In his most scarce gold coins, one of which discovered at ↗Adulis, Ḥ. appears on both sides, half-length bust rightwards, wearing low tiara or head cloth respectively; the tiara ends in four points topped by discs, a tail-like ribbon falling behind; his figure is flanked by small wheat stalks and further contained in an inner beaded circle with Greek legends. The obv. is inscribed: BACIΛỊ AΞωMI, i.e. Βασιλẹ[ὺς] Ἀξωμι[τ(ῶν)], *Basilẹ*[*us*] *Axōmi*[*t*(*ôn*)], 'King of the Aksumites' (cp. ↗Ǝsraʾel). Thanks to the clearer lettering of new numismatic evidence, the script on the rev., usually read as + IA + Θ + ΛΙ + A, i.e. Ἰαθλια, *Iathlia*, but also Ἰαθαζ(α), *Iathaz*(*a*) (or Ἠθασας, *Ēthasas*), and attributed either to a separate king "Iathlia" (Conti Rossini 1927:208f., no. 34; Pankhurst in DicEthBio 88; Pedroni 1997:74f.) or to "Iathaza (?) = Hataz?" (Type 136 in Munro-Hay – Juel-Jensen 1995:245), can be definitely restored to + H + Θ + AZ + A, i.e. Ἠθαζα, *Hēthaza* (hence Gəᶜəz *Ḥetaza, cp. Gr. HZANA, i.e. Ἠζανα, *Ēzana*, for ↗ᶜEzana, on Aksumite coins).

Equally rare silver examples display, on the obv., the king in a broad plain (or beaded) border, half-length bust full face, wearing either a tiara of four arches (with dots inside) and five spikes topped with discs, and pellets above each arch, or a crown composed of four splayed out ovals surmounted with discs on a base of three arches under further ovals also with discs. There is a Gəᶜəz legend: *ngś ḥtz*, 'King Ḥ.'. The rev. bears a Greek cross, sometimes with tripartite ends to the arms, in a diamond-shaped frame terminated by four crosses dividing the legend *śhl lʾḥzb*, 'mercy to the people', into as many groups of two letters (Type 137 in Munro-Hay – Juel-Jensen 1995:246). The same iconography and inscriptions, with a remarkably elegant design, apply to part of Ḥ.'s copper issues (Types 141-42, ibid., 251ff.). On the obv. of an elaborated copper var., the king is represented head and shoulders bust full face, with a hemispherical crown or helmet, flanked by wheat stalks; on the rev., a Greek, often flared-arms cross stands out in a peculiar octagon composed of usually concave lines and surrounded by the legend *ḥtz ngś ʾksm*, 'Ḥ., king of Aksum' (Type 140, ibid., 248ff.; AfrZion 115, no. 47). Other silver and copper coins have the king head and shoulders profile bust rightward on both sides, wearing a tiara or a head cloth, and labelled *ḥtz* and *ngś*, respectively (Types 138-39 and 142 in Munro-Hay – Juel-Jensen 1995:247f., 253).

Ḥatmīya ↗Islamic brotherhoods

Haud/Haud Reserved Area ↗Ogaden

Hausa

H. is the name used for the Afro-Asiatic language from the Chadic family and its speakers. In the Horn of Africa, H. is spoken by a number of small Muslim groups in western parts of Eritrea and Ethiopia and in large areas in the Sudan. The H. language varieties spoken in these regions remain undocumented (the only exception is the H. wordlist compiled by Ellero in Eritrea in the 1930s; EllLusAnt 99–102).

The most important reason for H. speakers settling in the Ethiopian and Sudanese regions is the *ḥağğ* (↗Pilgrimages). H.-speaking pilgrims might have come via these border regions for centuries. The pilgrimage often took years, as the pilgrims had to earn their living on the way and sometimes stayed. For example, the plantations in ↗Ḥumära attracted H.-speaking workers from the Sudan since colonial times. The same is reported on the ↗Gaš plantations nearby, in the Eritrean–Sudanese border area, where in the 1960s about one quarter of the land was used by West-Africans. Some of these also settled as farmers, manual workers and medicine men in nearby Kunama areas in Eritrea (settling, e.g., at Šambuko, s. Nikodemos Idris 1987:27; and at Dukambiya, s. EllLusAnt 103). Most of the Sudano-Eritrean H. groups are descendants of early-19th-cent. ↗Mecca pilgrims.

The H. speakers of the northern Eritrean highlands and their Sudanese hinterland are generally known as the ↗Tukrir (EllLusAnt 97, 103f.). This Muslim group of farmers and merchants can be found in settlements between Kärän and the Sudanese border town Kassala, and in cities like Täsänäy, Aqordät, Guluğ, ʿOm Hağer etc. (EllLusAnt 103). H. is particularly often spoken by transborder merchants. A prominent minority of Tukrir merchants in Kassala who are known for the production and resale of handicrafts speak H. Most H. speakers form large communities in several villages near Kassala, e.g. in Wagar in the Sudanese Gaš plain (s. Morin 1993/94). Most would use Arabic or/and Təgre as a second language. Like other H.-speaking groups, they show a remarkable degree of adaptation to their cultural environment, taking over the clothing, cuisine and other aspects of material culture of the hosting ↗Beğa society, but their main activity remaining trade.

Another H.-speaking Tukrir community was, at least up to the mid-20th-cent., that of the petty merchants and workers in the Sudanese quarter of ↗Massawa (EllLusAnt 103; Morley 1991: 11). Massawa served as a station on their way to Mecca, but World War II prevented them from reaching their aim. Today they are not identifiable as a group any longer; some H. seem to have merged with local Təgre and ʿAfar seafarers.

Locally H. speakers are often referred to as "Nigerians" (cp. interviews in the 1930s,

Hausa speakers in Beni Šangul, 2002; photo courtesy of Günther Schlee (664–019)

EllLusAnt 97). According to a 2002 estimate, ca. 5,000 "Nigerians" are living in Eritrea and are beginning to get a certain degree of recognition from the government.

Additionally, several small settlements of H. speakers have been recorded recently in the area of the ↗Berta. They are results of recent immigration from Qadarif in the Sudan; they settled south of Qadarif after a pilgrimage to Mecca in the 1930s to 40s, living from rain-fed agriculture. These farmers speak H. and Arabic and some of them Oromiffa. They declare to have followed a written prophecy which says that "you will find a good life in Ethiopia" (Schlee 2002). Their neighbours tend to identify them with the, however ethnically different, ↗Fellata.

Another H.-speaking group of unknown size lives in ↗Käfa. In daily life Käfiččo is spoken, but the H. language is still used in mosques. Their migration history is unknown. Their presence could be explained by an expedition from the Belgian Congo to Käfa in 1898–99, led by the journalist Nebel (↗Expeditions). Their ca. 200 troops consisted of Senegalese and H. soldiers, many of whom took wives on the way and stayed in Käfa (Recking 1936).

Ḥawarya Krəstos

Ḥ.K. (ሐዋርያ፡ ክርስቶስ, also Ḥawarya Kəsos, d. 4 May 1700) was a member of the Gondärine court and royal chronicler. Ḥ.K. belonged to the higher clergy (*liqawənt*) in the court of the Gondärine rulers and to the *curia regis*. As such, he held the title of ↗*azzaž*. Towards the end of the reign of *aṣe* Yoḥannəs (r. 1667–82), Ḥ.K. was also granted the title of ↗*ṣäḥafe təʾəzaz* and was probably the author of the Emperor's Chronicle (GuiIohan). He viewed this literary work as a service to the sovereign and always remained in the narrative loyal to the Emperor's interests. Thus, in describing the Church councils summoned by Yoḥannəs to solve the religious differences between the two theological parties of ↗*Qəbat* and ↗*Täwaḥədo*, Ḥ.K. took the side of the latter, whom the Emperor favoured.

In July 1682 Ḥ.K. and another *ṣäḥafe təʾəzaz*, Wäldä Haymanot, were in charge of sending messages to every province announcing the death of *aṣe* Yoḥannəs and the enthronement of his son *aṣe* ↗Iyasu I. Ḥ.K. completed the Chronicle of *aṣe* Yoḥannəs and began that of *aṣe* Iyasu I, which he continued to write until his death. Well versed in the art of church poetry, on 16 January 1694, during the ceremony of Epiphany, he had the honour to improvise ↗*mäwäddəs* for *aṣe* Iyasu I.

Ḥ.K. was killed in a battle between the royal army and the warriors of the Oromo ↗Gudru. The royal Chronicle was continued by his successor *azzaž* Zäwäld, who in the Chronicle wrote regarding his death: "When Ḥawarya Krəstos was killed, the royal signet-ring was on his finger; then the *ṣäḥafe* who followed him, his direct subordinate, went to the place where he had been killed and brought the royal signet-ring back. And among the clergy [...] Zäwäldä Maryam was speared in the breast, but escaped death by God's mercy" (GuiIohan 228). The "short chronicle" gives also the name of the scribe (*abba* Kəfle) and mentions that "*abba* Zäwäld was wounded in the breast, and the Emperor appointed *abba* Zäwäld in the office of *ṣäḥafe təʾəzaz* of Ḥ.K., and since then he was called *azzaž* Zäwäld" (BassÉt I, 366).

Ḥawaryat: Gädlä ḥawaryat

The G.ḥ. (ገድለ፡ ሐዋርያት, '[Spiritual] Contendings of the Apostles') is the main Ethiopian collection of apocryphal *Acts of the Apostles* – in fact, a "slavish" translation from Arabic, dating not later than the 14th cent. There is no evidence for the translation of apostolic apocryphal texts in the Aksumite period, apart from the *Acts of Mark* (Getatchew Haile 1981; Lusini 2002) and, probably, some lists of Apostles and Disciples: e.g., in the mss. BN Éth. 181 (ChAbb 153f.), fols. 125vb–

127ra, and EMML 3515, fols. 93r–94r. The *terminus ante quem* for the G.ḥ. cannot be sought after in ms. EMML 1767, unlikely to date to 1292/97 (cf. UhPal 68, n. 31), but is still provided by ms. BN Éth. 52 (ZotBNat 53ff.), dating to 1379.

In its most extensive recension, the G.ḥ. comprises the texts indicated in CANT as nos. 190.iv, 197 *longior*, 204–05, 218, 223–24, 235, 238, 240, 245.ii, 252, 260–61, 276 and 282, plus BHO, nos. 891–97. The G.ḥ. is the final stage of a work composed within the Coptic Patriarchate of Alexandria by arranging a comprehensive collection of Arabic translations (13th cent.) of Greek or Coptic originals, generally freed from Gnostic and heterodox elements. The existence of an early collection of Coptic texts, denied by Guidi (1888), is now currently acknowledged (s. Lucchesi 1984).

Besides Guidi's, the main contributions to the study of the G.ḥ. were made by Malan (1871), whose translation from the ms. Manchester, John Rylands University Library, Eth. 6 (cf. Strelcyn 1974:9ff.), served as a basis for Lipsius's study (1883:222ff.), Budge (1899, 1901, 1935), who edited and translated the widest recension of the G.ḥ., from the mss. BritLib Orient. 678 and 683 (cf. WrBriMus nos. 101, 102); and by James (1902), with important remarks on Budge's edition.

There are no less than 68 mss. of the G.ḥ., and on account of the distribution of the texts, a first attempt at a classification has been made (s. Bausi 2000–01, with a full list of mss. and further details). The oldest recension (perhaps 13th cent.) is found in mss. EMML 1767; BN Éth. 52; Ṭānāsee 173 = Dāgā Esṭifānos 62 (cf. SixTana III, 226ff.); BN d'Abbadie 58 (CRAbb no. 45). It includes the following 28 texts, as well as an "Introduction": *Preaching* and *Martyrdom of Peter*; *Martyrdom of Paul*; *Preaching* and *Martyrdom of Bartholomew*; *Acts* and *Martyrdom of Matthew*; *Martyrdom of Luke*; *Preaching* and *Martyrdom of Philip*; *Preaching of Andrew*; *Acts of Andrew* and *Bartholomew*; *Martyrdom of Andrew*; *Acts* and *Death of John*; *Martyrdom of James, son of Alphaeus*; *Acts* and *Martyrdom of Matthias*; *Acts* and *Martyrdom of James, son of Zebedee*; *Martyrdom of Mark*; *Preaching* and *Martyrdom of Thomas*; *Preaching of Judas Thaddeus*; *Preaching* and *Martyrdom of Simon Judas*; *Preaching* and *Martyrdom of James, brother of our Lord*. In the course of time, other texts were added to the original nucleus of the G.ḥ.: short – as in mss. Firenze, Biblioteca Nazionale Centrale, Magl. III 4 (Bausi 1989:24ff.); EMML 1825; Ṭānāsee 43 = Kebrān 43 (HamTana I, 184f.); BritLib Orient. 684 and 685 (WrBriMus nos. 108, 109); BN d'Abbadie 64 (CRAbb no. 46) – and then longer ones: in particular, a second recension of the *Acts of Matthias and Andrew* and five new episodes of the *Acts of Thomas* (also found isolated in mss. EMML 1963 and BN d'Abbadie 91 [CRAbb no. 57]); cf. mss. EMML 1482, 2406, 4442, 5409, 6839, 7604; BritLib, Or. 678; Ṭānāsee 25 = Kebrān 25 (HamTana I, 138f.); VatLib et. 234 (GreTisVat 739ff.) and 296 (van Lantschoot 1962:494f.); Manchester, John Rylands University Library, Eth. 6. The *Acts of Peter* and *Acts of Paul* were integrated later into the collection (around the 17th cent.): mss. BritLib Orient. 683, 681, 679 (WrBriMus nos. 102, 103, 107) and EMML 676 and 813. The same texts appear in three mss. in which the *Martyrdom of Philip* is wrongly attributed to Andrew: BritLib Orient. 680, 682 and 677 (WrBriMus nos. 104–06).

It is possible that the insertion of new texts was also accompanied by the revision of others, as it seems to be the case for the *Martyrdom of Peter*: in all mss. of the oldest recension, the final "Speech of Peter on the cross" is missing, while it is found in some mss. from the 15th cent. onward (s. Bausi 2000–01); however, as G.ḥ. is quoted in the Vita of ↗Absadi of Däbrä Maryam, its circulation in an isolated form already in the 14th cent. is possible (cf. LusStud 73). It seems very unlikely that in the case of the mss. of the G.ḥ. the rule *recentiores non deteriores* applies, since the oldest Ethiopic recension, composed of 28 texts, is exactly the same as the oldest Egyptian Arabic one indicated by Graf (GrafLit vol. 1, 259f.). However, a recent hypothesis on the existence of a different old Arabic collection of 35 apocryphal *Acts of the Apostles* has been put forward by van Esbroeck (1999), to whom we owe the only studies on the Arabic tradition after Graf's 1944 work.

The large number of mss. of the G.ḥ. is due to the enduring fortunes of the work, which has become the main source of inspiration for the cult of the Apostles. The short apostolic entries in the second recension of the ↗*Sənkəssar* are taken from the G.ḥ. (cf. Colin 1988:310f.), and the romanesque adventures of the Apostles are a frequent subject in church wall-paintings. A modern Təgrəñña compendious translation of the G.ḥ. by Yaʿəqob Ṣägga Zäʾab (1991) is also available.

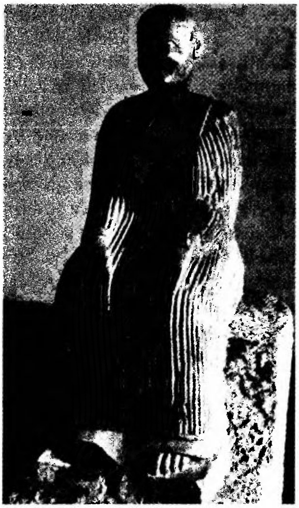
Ḥawəlti

Ḥ. (**ሐውልቲ**, lit. Tgn. 'monument'; cp. Gəᶜəz *ḥawəlt* 'monument') is an archaeological site located in a broad fertile plain approximately 10 km south-east of ↗Aksum in Təgray, Ethiopia.

Archaeological excavations at Ḥ. carried out by the Ethiopian Institute of Archaeology in 1958–59 revealed a probable elite ceremonial centre with two quadrangular-shaped stone buildings and square monolithic pillars likely dating to the ↗Pre-Aksumite culture period. The quadrangular-shaped buildings seem to represent small Pre-Aksumite temples or shrines. These two buildings are oriented on an east-west axis and each has a flight of stone steps leading to a terrace surrounded by a bench-like structure.



Statue of a female figure, Ḥawəlti; from Buxton 1970: 205

Excavations at Ḥ. revealed pottery vessels similar to examples found in Pre-Aksumite assemblages at ↗Yəḥa and ↗Mäṭära and a number of ceramic figurines including depictions of seated female human figures, cattle and wild animal figures, and miniature models of yokes and round and rectangular-shaped houses. These ceramic figurines and models may represent ex-voto offerings left in the temples sometime during the Pre-Aksumite period. Also found at Ḥ. were a ceramic sphinx figure, several white limestone statues (only one of which was intact) and an elaborately carved covered limestone throne or naos. Two of the statues depict seated female figures generally similar in form to the statue found at the archaeological site of ↗ᶜAddi Gälämo (s. Caquot – Drewes 1955).

The most complete statue at Ḥ. is 82 cm in height and depicts a woman seated with her hands on her knees and wearing a long robe-like garment with narrow vertical pleats, a necklace with a large pectoral counterweighted at the back, and four-ringed bracelets on each wrist. The covered "throne" is about 140 cm in height with feet carved in the form of cattle hooves and friezes of ibexes carved onto the front and sides. The covered throne also has low reliefs carved on its sides depicting a tall bearded male figure wearing a cloak-like garment and carrying a fan-like object. The bearded man is preceded by a small beardless figure (female?) holding a staff and wearing an ankle-length robe-like garment with a mantle covering the shoulders. In addition to ceramic artefacts and the limestone statues and throne, two blue faience figurines and a number of bronze artefacts were found during excavations at Ḥ. Bronze artifacts found at Ḥ. include open-faced thin metalwork badges or plaques containing geometrical designs and a variety of bronze tools, including sickles, daggers and axe blades.

Various stone inscriptions (RIÉ nos. 14–17) and bronze monograms in South-Arabian writing known as "identity marks" (RIÉ nos. 293–94), along with the archaeological complex of the site, suggest that H. was an important elite centre during the Pre-Aksumite culture period of ancient Ethiopia. Inscription RIÉ no. 15 from H. contains the name of king WʿRN ḤYWT (also known from RIÉ nos. 1 and 11), RIÉ nos. 16-17, the name of a woman associated with the king, *ʿrky*(*t*)*n* (RIÉ no. 1).

Matthew C. Curtis

Ḥawi: Mäṣḥafä ḥawi

M.ḥ. (**መጽሐፈ፡ ሐዊ**, lit. 'The Book of *Ḥawi*') is a ↗Gəʿəz translation, from Arabic, of a large "encyclopaedia" of Christian doctrine and moral and ascetic theology that is divided into 63 chs. The title comes from Arabic كتاب الحاوى (*Kitāb al-ḥāwī*, lit. 'Book of the Collector'). The work's importance is indicated by a miraculous story concerning the M.ḥ.'s origin and divine protection in the *Miracles of Mary* (↗*Täʾammərä Maryam*; mss. EMML 1606, fol. 50a, miracle no. 112; Paris, BN d'Abbadie 222 [= CRAbb no. 53, fol. 110r–112r, miracle no. 68]).

The Greek original (Πανδέκται τῶν ἑρμηνείων τῶν θείων ἐντολῶν τοῦ Κυρίου, 'Pandects of the Explanations of the Divine Commandments of the Lord') was allegedly compiled in the 11th cent. by Nikon, monk from the monastery of the *Theotókos toû Rhoïdíou* ('Mother of God of the Pomegranate'; sometimes called *toû Rhaïthou*, through mistake, in the manuscripts), near Antioch (GrafLit vol. 2, 64ff., 327). In the introduction to his work Nikon declares that he imitated a previous collection made by Antiochus, a monk from Mar Saba, near Jerusalem, who lived in the 7th cent. (GrafLit vol. 1, 412).

According to the preface of the Ethiopic version, the work was translated from Greek into Arabic by "Gäbrəʾel *wäldä Bäträk*" (?), a monk from the monastery of St. Anthony, in the year 1266, but this dating is cerainly too late and refers only to the copy used by the Ethiopian author (ZotBNat 106). In fact, the tale transmitted in the *Miracles of Mary* assigns the Arabic version to the Egyptian patriarch "Gäbrəʾel *wäldä Tarik*", who wrote it during a three-year period of exile in the monastery of Paul. This personality can be identified with Ǧibrāʾīl (II) b. Tarīk, the 70th patriarch of Alexandria, in office from 1131 to 1145 (Conti Rossini 1925:505), while the introductory passage of the Ethiopic M.ḥ. probably refers to the same person, even if here the date is imprecise.

The Ethiopic (Gəʿəz) version was prepared in 1582 by ↗Salik at the monastery of Däbrä Libanos in Šäwa, during the 20th year of *aṣe* ↗Śärṣä Dəngəl's reign. Philological traces of the Arabic Vorlage are apparent in the Ethiopic text.

The M.ḥ. was not translated into any other Ethiopian contemporary language, with the exception of chs. 50–63, available in an Amharic version (ms. EMML 7424), from a seemingly careless Ethiopic Vorlage (however, precisely these chapters are missing in ms. EMML 4749). The majority of available manuscripts are in good condition. Perhaps the best example is an 18th-cent. manuscript of the work from the collection gathered by Eduard ↗Rüppell, now at the Universitäts- und Stadtbibliothek Frankfurt am Main (ms. orient. Rüpp. III, 1).

Though most of the Church Fathers quoted in the work are from the East, there are also many from the West, like Cassianus, Pope Gregory I and Isidore of Seville (WrBriMus 253). The text contains numerous detailed instructions concerning Christian life: Holy Scripture and doctrine, the clergy's behaviour in the world, monks, nuns and laity, prayer, food, fasting, almsgiving, clothing, relationships between men and women, moral obligations, the right attitude of a spiritual guide towards spiritual children, attitudes to different church orders and ways of worship, attitudes to Muslims and pagans etc.

Hawiye

H. is one of the major ↗Somali clan families. The H. live scattered in a wide belt that extends from the Mudug region along the coast of the Indian Ocean in the east to Bale and north-eastern Kenya in the west. Some of their major clans are, in Somalia, the Habar Gidir, the Abgaal, the Murursade (also known as Murasade or Murusade) and the Sheekhaal, and in Ethiopia the Jiidle. The Gaalǧeᶜel and the Ḥawaadle in the central regions of Somalia and the Dagoodiyo (also known as Digoodiya) in Kenya and southern Ethiopia are usually regarded as H., even though according to several genealogies they don't descend from Irir like the other H.

The term H. was first mentioned by the Arab geographer Ibn Saᶜīd in the 13th cent. (Cerulli 1957:93ff.) in relation to settled people behind ↗Merca. In the following centuries a sultanate led by the Aǧuraan – today a minor H. clan – prospered in the rich agricultural area of the lower Shabeelle (↗Wabi Šäbälle) and had close links with the Muẓaffar sultanate in ↗Mogadishu. The Abgaal and some other closely related H. clans made of Shingaani – one of the historical districts of Mogadishu – the seat of their *imām* in the 18th cent. At the end of the 19th cent. a member of the family of the Majeerteen *sulṭāns*, Yūsuf ᶜAlī Keenadiid, conquered ↗Obbia on the coast where the Habar Gidir border with the Murursade and established an independent sultanate. In later decades, the enmity that was thus kindled between the H. and the ↗Daarood has been frequently evoked, even when they uneasily joined their forces in the Somali Youth League, the major Somali political party in the 1950s–60s.

Like other Somali, the H. are camel- and cattle-pastoralists, but also engage in agriculture where there is enough water and rain. During the colonial occupation and in the subsequent decades, consistent groups of H. migrated to Mogadishu, where they played an important role in the economy. Their lineage-organization, material culture and religious life does not differ substantially from that of the other northern Somali. It is worth mentioning, however, that the Sheekhaal are a religious lineage that frequently lives in small groups among other clans.

Only the H. of the central regions of Somalia, i.e., southern Mudug, Galgaduud, Hiiraan and Central Shabeelle, speak dialects that are somewhat different from those spoken by the mainly Daarood Somali that live around them – they were called Benaadir dialects by Moreno (1955) and Lamberti (1983:58 ff.). The H. participate in the rich oral literary Somali tradition to which they contributed with several well-known poets, such as *šayḫ* Aḥmad Gabyow (b. 1844), and Faaraḥ Šuuriye (d. ca. 1960). It is noteworthy that the Abgaal have two genres of poetry of their own, the *guurow* and the shorter *širib*.

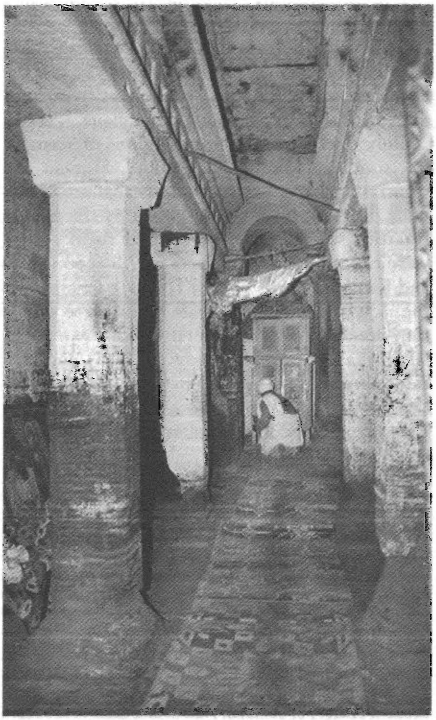
Giorgio Banti

Ḥawzen

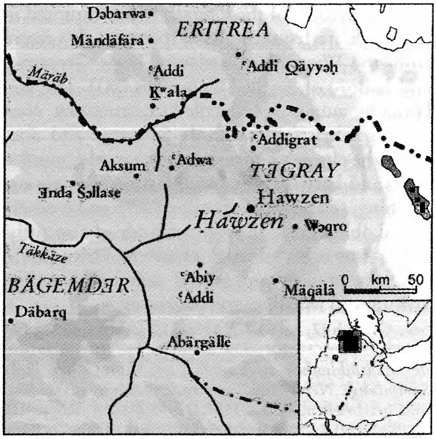
Ḥ. (ሐውዜን) is the name of a *wäräda* (93,300 inhabitants) and its administrative capital (3,250 inhabitants) situated in the West Təgray Zone.

In the past, the Ḥ. plain was part of the historical region of ↗Gärᶜalta, an area important for its cultural heritage. According to a classical hypothesis, the name Ḥ. is reminiscent of the South Arabian place-name Hawzan (HWZN), and this part of the Ethiopian highlands was affected by the Sabaean migration. Aksumite material, including inscriptions, has been found in the Ḥ. *wäräda* (↗Dəgum, ᶜAnza, with RIE no. 218; ↗Aksumite culture). Old hagiographic traditions arose in this area: among the several groups of ↗Ṣadqan, the so-called Ṣadqan of Ḥ. are known.

Such archaeological and traditional evidence seems to point to the importance of Ḥ. in ancient times (as already perceived by Manoel ↗Barradas, Tractatus, II, 43; s. Barradas 1996:153, Beccari 1912:137). The most significant monument, still preserved in the modern town, is a three-aisled south-west-oriented rock-hewn church, possibly of a very early date (10th/11th–12th/13th cent.?). The sanctuary (to the east), which contains a *tabot* dedicated to *abunä* ↗Täklä Haymanot, unusually wide capitals with splayed corners and chamfered columns with stepped bases, recalls similar features in monuments found around the thrones of ↗Aksum.



Ḥawzen, Täklä Haymanot church; central nave, eastward view: chamfered columns with large bracket capitals and stepped bases; photo 2004, courtesy of Michael Gervers



After the decline of Aksum, the Ḥ. area must have kept its important role, as suggested by a series of still visible religious monuments (Bäraqit, Dəgum). According to a tradition transmitted in the 17th-cent. *Gädlä Märqorewos*, at the end of the 13th cent. the province (*bəḥər*) of H. was ruled as a part of one single royal appointment (*śimät əmḥabä nəguś*) over the territories extending from the Täkkäze river to Arho (i.e. the Salt Plain), and including ↗Mänbärta, ᶜAṣbi, ↗ Dära, ↗Ṣəraᶜ, ↗Ǝndärta, ↗Säḥart, ↗Tämben, Gärᶜalta and Amba Sənit, up to the confines of ↗ᶜAdwa (Conti Rossini 1904:33f.).

In the form Ḥawzena (ሐውዜና), the place-name is mentioned in two land-granting documents of the *Liber Axumae* attributed, respectively, to the mythical couple ↗Abrəha and Aṣbəḥa (ca. 4th-6th cent.) and to Aram, *nəburä əd* of Aksum at the end of the 18th cent. (CRAxum 19, 56).

Ḥaydar ʿAssāl al-ʿAwlaqī ↗ʿAbdalkarīm b. Muḥammad b. Abī Bakr

Ḥaydära

Ḥ. (ሐይደራ, or Ḫaydära) was the ruler of ↗Däwaro, tributary to the Christian Emperor ↗ʿAmdä Ṣəyon I in the 1330s. His name, connected with the Arabic *ḥaydar* or *ḥaydara* ('lion'), indicates that he was a Muslim.

Not mentioned in the Muslim sources at all, Ḥ. was, according to the Chronicle of ʿAmdä Ṣəyon, allied in conspiracy with the rebellious ↗Walašmaʿ ruler of Ifat, ↗Ṣabraddīn b. Muḥammad b. Dalḥūy b. Manṣūr. As the Chronicle states, Ḥ. was "like Judas the traitor ... double tongued": perfidiously, he openly professed in words his love to the Emperor whilst secretly approaching Ṣabraddīn to create an alliance to provide mutual support. ʿAmdä Ṣəyon, however, foiled the plot of Ḥ. and his ally and in April 1332 conducted a long and difficult punitive expedition against the two rebels. After having subdued Ṣabraddīn, who had surrendered, ʿAmdä Ṣəyon also captured his friend and former ally Ḥ., bound him in chains and ravaged the whole Däwaro region. Thererupon, the country was placed under Ṣabraddīn's brother, ↗Ǧamāladdīn, as a tributary of Ethiopia.

Ḥ.'s name must have made a deep impression upon the Ethiopians since his defeat is mentioned several times in the songs of the soldiers in praise of ʿAmdä Ṣəyon and ↗Zärʾa Yaʿəqob. In two passages (Guidi 1889:62, 64 [nos. viii, 13; x, 33]) it refers to the governor of Däwaro, in another one (ibid. 63 [no. ix, 6]) it possibly indicates a geographical name (Hedra and many variants).

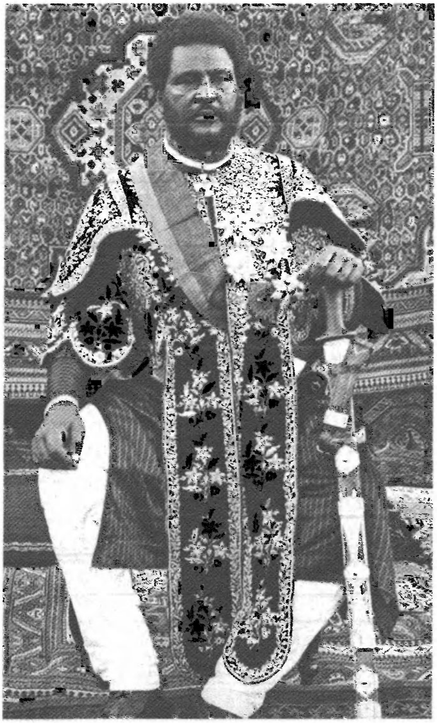
Franz-Christoph Muth

Ḫaylä Giyorgis Wäldä Mika'el

Bitwäddäd Ḫ.G. (ኀይለ፡ ጊዮርጊስ፡ ወልደ፡ ሚካኤል, d. 15 April 1925) was an important politician at the court of *aṣe* ↗Mənilək II. A ↗*näggadras* of ↗Addis Abäba and ↗Dərre Dawa, when the Council of Ministers was introduced in 1907, Ḫ.G. became the Minister of Foreign Affairs and Commerce.

Ḫ.G. tried to westernize bureaucracy in Addis Abäba and centralize control over the city. He introduced a new kind of land tenure in the capital, strengthened police forces and optimized the collection of custom revenues, relying heavily on his French advisors. Ḫ.G.'s economical power was, among other things, based on his co-operation with Ḥasīb Idlibī (↗Ydlibi) and the so-called "rubber monopoly" – a concession given by Mənilək to the English company to grow rubber plantations on the banks of the Baro river.



Ḫaylä Giyorgis Wäldä Mikaʾel in 1917; from the estate of Maurice de Coppet, Helsinki University Library, archive no. 3471

In 1909 Ḫ.G. opposed *ətege* ↗Ṭaytu Bəṭul and was subsequently dismissed from his high positions. The post of the Minister of Foreign Affairs was given to *fitawrari* ↗Habtä Giyorigis. Ḫ.G. was put in chains but released a day later. After Ṭaytu's fall, he was reinstalled in his position, won the trust of *ləǧ* ↗Iyasu and had almost absolute authority in the internal administration of Addis Abäba. Ḫ.G.'s marriage to Iyasu's sister, *wäyzäro* Səhin, helped him in his court career. He was promoted to ↗*bitwaddäd* and got Habtä Giyorigis's position as de-facto prime minister.

During the 1916 ↗coup d'état, Ḫ.G. joined the opposition against Iyasu, which ensured his pardon from Habtä Giyorgis and the new government. In 1917, however, he was arrested and chained; all his property was seized at ↗Zäwditu's and Täfäri Mäkʷännən's (↗Ḫaylä Śəllase I) order. He was released soon thereafter, but never got back to power.

Ḫaylä Mäläkot

Ḫ.M. (ኃይለ፡ መለኮት, b. ca. 1827, d. 9 November 1855) was *nəguś* of ↗Šäwa from 1847 till 1855. The eldest son of *nəguś* ↗Sahlä Śəllase, his mother was Bäzzabbəš, granddaughter of Ṭədu of Morät, who was defeated by *märʿədazmač* ↗Asfa Wässän (Sahlä Śəllase's grandfather). There were rumours that his father preferred the younger son, Säyfu, to succeed him, but when Sahlä Śəllase died, Ḫ.M. was proclaimed king. Nevertheless, he did not imprison his brothers, as had been common in Šäwa until then, modelled on the practice of the imperial court. When the ↗Tuulama Oromo, who had been defeated by Sahlä Śəllase, heard of his death, they revolted and Ḫ.M. spent the first few years campaigning, with great success, against them.

Ḫ.M. aspired to a central role in Ethiopian politics and according to Ḫəruy Wäldä Śəllase (AWTarik 127) he even took the title of ↗*aṣe*, although he was not anointed and was usually known by the title of *nəguś*. In 1853 he invaded Därra and liberated *ras* ↗Ali Alula, who had been imprisoned by the local ruler when he took refuge there after being defeated by *aṣe* ↗Tewodros II. In June 1855 Tewodros invaded Wällo. Ḫ.M. co-operated with the Wällo ruler, ↗Wärqitu, but their plans failed

Ḫaylä Mäläkot; photo courtesy of the IES (no. 92 H10, 71) and Ḫ.M. returned to Šäwa. In October 1855 Tewodros invaded Gəšše and a series of battles ensued with local Šäwan governors, who were all defeated. The main Šäwan army was deployed at Atakəlt, north of Däbrä Bərhan, and followed some skirmishes with the army of Tewodros. But Ḫ.M. was seriously ill and on 30 *Ṭəqəmt* 1848 A.M. (9 November 1855 A.D.; many sources erroneously date it to 1847 A.M.) he died and the Šäwan army fled. They buried Ḫ.M. at Däbrä Bäggə^{c} (20 km south-south-east of Däbrä Bərhan). His young son, Mənilək (later *aṣe* ↗Mənilək II) was proclaimed king of Šäwa.

Svein Ege

Ḫaylä Maryam Gäbre

Däǧǧazmač Ḫ.M. (ኀይለ፡ ማርያም፡ ገብሬ, d. 1826) was a prominent, albeit secondary player in national political struggles. The son of *ras* ↗Gäbre Täsfa, whom in 1815 he succeeded as ruler of Səmen and Wägära, he was subordinate to *ras* ↗Gugsa Märsa of Däbrä Tabor, whose daughter, Ḫirut, he married. They had at least two sons, Märso and Betul (the father of Ṭaytu and Wäle). From another woman he had one more son, Wəbe (later his successor, *däǧǧazmač* ↗Wəbe Ḫaylä Maryam).

Ḫ.M.'s rule over Wägära and Wälqayt was constricted, to the south and south–west, by *däǧǧazmač* Maru and, to the north and north-east, by *ras* Wäldä Śəllase of Təgre. Ḫ.M. was protector of the monastery of ↗Wäldəbba where he was buried. He was one of a group of leaders who sent to Alexandria for a bishop to replace *abunä* ↗Qerəllos, not long before the latter's death. Just before his death he succeeded in deposing *aṣe* ↗Gigar, briefly, in favour of *aṣe* ↗Bä^{c}ədä Maryam III. He died following defeat in battle.

Ḫaylä Maryam Kaḥśay

Ḫ. (ኀይለ፡ ማርያም፡ ካሕሣይ; b. ca. 1894/95, ↗^{c}Addigrat, d. 25 November 1970, ^{c}Addigrat) was a Catholic bishop and the first native eparch of Ethiopia. He was the son of Wälättä Bərhan and Kaḥśay Däbäsay – who was related to Emperor Yoḥannəs IV's mother – the two stemming from a long line of highly respected families from the ^{c}Agamä.

Following the 1897 decree urging Catholics to either convert or to leave the country, Ḫ.'s family went into exile to Mänäkusoyto (Monksoyto), in the recently established colony of Eritrea, where banished Catholics were given asylum. Ḫ. and his brother and sisters followed a religious life. At the age of 13, he attended the secondary school founded by the Lazarists in ↗Alitena and, once completed education, he was sent in September 1919 to the Ethiopian College at the Vatican. Due to poor health, he returned to Təgray 18 months later and continued his studies at the seminary in Alitena. As at the time there was no bishop in the Vicariate of Abyssinia, he was ordained priest in Asmära, on 30 August 1925.

After teaching in Alitena for one year, *abba* Ḫ. was sent to teach at the Vincentian College in Addis Abäba, but for reasons of ill health returned, after a year, to Alitena. Several years later, owing to deteriorating eyesight, he joined his elder brother, *abba* Täklä Maryam, who had been exiled to ↗Jerusalem. There, Ḫ. underwent medical treatment for eight months.

With the Italian occupation of Ethiopia, as native priests were treated with deep suspicion, *abba* Ḫ. was exiled to Ǝnda Śəllase in western Təgray, where he grew popular with the local population. To avoid his popularity from spreading further, he was again removed and sent to Bizät. Once all suspicion of any political intrigue had been removed, he was sent back to G^{w}al^{c}a. With the intention of promoting education in general and sponsoring vocations to the priesthood, he reactivated and reorganized a diocesan college at a new location called Kudḫanay, a few kilometres to the east of ^{c}Addigrat.

After liberation, as the priest-in-charge of the Apostolic Prefecture of Təgray, Ḫ. was nominated Prefect Apostolic. On 1 May 1951, he was consecrated a bishop in Rome, marking a further step in restoring the ecclesiastical structures of the Ethiopian Catholic Church. According to the Apostolic Constitution of 31 October 1951 he became the Apostolic Exarch of Ethiopia and, as the only bishop, he had jurisdiction over 13 of Ethiopia's provinces. From his residence in Addis Abäba, he exercised many initiatives by inviting various religious and missionary congregations to the country and establishing schools. Those initiatives, in fact, extended beyond the capital as in 1952, once his legal claims to the land had been recognized, he established the parish of ʿAddigrat and began building a more permanent diocesan college and a church, which later became his cathedral.

In February 1961, when the Ethiopian hierarchy was established with Addis Abäba as the Metropolitan See, *abunä* Ḫ. declined to be the first Metropolitan. Instead, he withdrew to become head of the newly created eparchy of ʿAddigrat, which replaced the former Apostolic Prefecture of Təgray. To consolidate the formation and education of his priests of the Ethiopian rite, he initiated the construction of a major seminary. In April 1969, the cathedral of the Holy Saviour was consecrated, where he was later to be interred.

Kevin O'Mahoney

Ḫaylä Maryam Mammo

Ləǧ Ḫ.M. (ኃይለ፡ ማርያም፡ ማሞ; d. 6 June 1938, Gafra) was a ↗Resistance fighter. He emerged from being an obscure ↗*balabbat* and farmer in northern Šäwa to become a national hero during one of the most troubled periods in Ethiopian history, 1935–41. Early in his life, Ḫ.M. had been a ↗*šəfta* and was imprisoned for murder. However, on the eve of the ↗Italian war of 1935–36, he was pardoned by *aṣe* Ḫaylä Śəllase I to join the fight against the Italian invasion. Thereafter, he joined the northern front, where he was one of the few to challenge the advance of the enemy, far superior in military weaponry. At a place called Č̣äč̣a Suke Ṣärabi, near ↗Däbrä Bərhan, he ambushed a contingent of enemy troops, causing significant human and material losses. However, the Italians were able to recover from this attack and capture, on 5 May 1936, ↗Addis Abäba.

Ḫaylä Maryam Mammo; photo courtesy of the IES (no. 88 H10)

Following this, Ḫ.M. created a rebel formation of his own and continued fighting against the Italians, joined by such Šäwan patriot leaders as *ras* ↗Abbäbä Arägay. In July 1936, he took part in the unsuccessful assault on Addis Abäba. Contrary to the hesitations of such leaders as Abärra Kaśa of Sälale, he remained determined to continue the struggle. Later, he was joined by several cadets from the ↗Holota Military Academy, who, attracted by his determination and methods, had abandoned Abärra to fight under his command.

Ḫ.M. fought against Italian forces with uneven success in Sälale, Tägulät, Märḥabete, Gindäbärät and Bulga. His final encounter with the Italians was on 6 June 1938 at the Battle of Gafra or Gormesa (Bulga) – in which Abbäbä escaped while Ḫ.M. was mortally wounded. During the post-Liberation period, his remains were brought to Addis Abäba and reburied in a cemetery reserved for patriots at the Holy Trinity Cathedral. His person is remembered in poems and his name was given to a school (in Däbrä Bərhan), a hospital (↗Adaama) and a street (Addis Abäba).

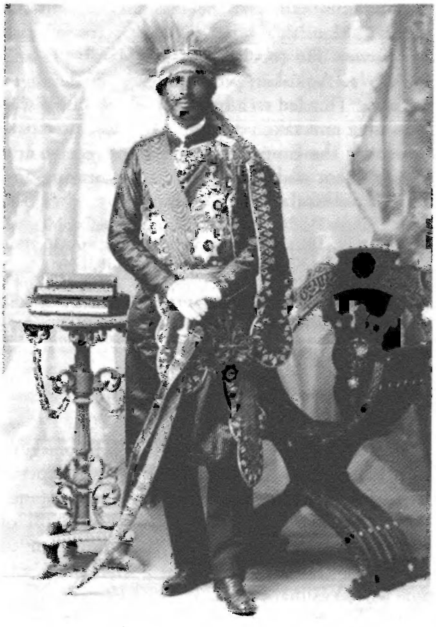
Seltene Seyoum

Ḫaylä Maryam Śärabyon

Ḫ.M. (ኃይለ፡ ማርያም፡ ሠራብዮን, also Haylä Maryam ["*Paša*"], b. 1863, Dänqäz, d. 1929, Addis Abäba) was the son of *aläqa* Śärabyon and *wäyzäro* Ṣəllatä Kidan. Few details are known about his early life: he was a talented student of traditional church school and was sent to be educated in France, where he spent quite a number of



Ḫaylä Maryam Śärabyon; photo by L.M. Yazedjian; courtesy of the author

years. He returned to Ethiopia after the ↗ᶜAdwa battle and soon became one of the top ten advisors of ↗Mənilək II. Ḫ.M. spoke French, German and Italian in addition to Gəᶜəz and Amharic which helped him to be promoted to the rank of Palace Minister (*yägəbbi minister*) with special responsibility for educational affairs. He acted as a translator and sat on the Board of Directors of the Addis Abäba – Djibouti Railway Company as the representative of the Ethiopian Government for several years. In 1905 he was delegated, with *däǧǧazmač* Mäšäša Wärqe and other officials, to Turkey (↗Ottoman Empire), where he successfully worked on settling the question of the rights of the Ethiopian community in ↗Dayr as-Sulṭān (probably, he was called "*Paša*" thereafter).

Founder of eight parish schools in various parts of Ethiopia, which were precursors of modern schools, Ḫ.M. was an intellectual and a promoter of modernisation. He also was the last author of a ↗hagiography in the history of this genre in Ethiopia for he wrote the *Life of Joseph* (ገድለ፡ ዮሴፍ, *Gädlä Yosef*), the mss. of which were deposited in St. Joseph churches in Addis Abäba and Gondär, established by H.M. in 1908 (mss. EMML 894).

Ḫ.M. was entrusted by *aṣe* Mənilək with designing the Imperial coat of arms (↗State symbols). His design, completed in 1905 and rich in symbolism going deep into Judeo-Christian Ethiopian tradition, was accepted and the coat was used from the beginning of the 20th cent. until 1974. After Mənilək's death, Ḫ.M. kept his position, but, a supporter of *ləǧ* Iyasu, he was disliked by ↗Zäwditu and considered potential enemy by *ras* Täfäri Mäkʷännən.

Berhanu Gizaw Haile Mariam

Ḫaylä Mikaʾel Əšäte

Däǧǧazmač Ḫ.M. (ኃይለ፡ ሚካኤል፡ እሸቴ, also Ḫaylu Əšäte, b. 26 June 1753, d. ca. 1809/10) was the son of Əšäte, *däǧǧazmač* of Damot, a close relative of *ətege* Məntəwwab (↗Bərhan Mogäsa), and of *wäyzäro* Wälättä Rufaʾel. Ḫ.M. was one of the most prominent characters of the ↗Gondärine kingdom during the ↗*Zämänä mäsafənt*. On the basis of his life-story, written by his friend and associate *abeto* ↗Abägaz (Guidi 1902; BlunChr 303–57 [tr.]), his biography could be reconstructed in great details (Tekle-Tsadik Mekouria in PICES 8, vol. 2; Kropp 1989:14–22).

Ḫ.M. had a hazardous life, usual for that time, taking part in political struggles, "king-making", riots and military campaigns during the reigns of ↗Täklä Haymanot II, ↗Sälomon II, ↗Täklä Giyorgis, ↗Iyasu III and ↗Həzqəyas. Due to tense relations with *ras* ↗Ḫaylu Yosedeq, Ḫ.M. had to go to a short-time exile in the monastery of ↗Maḫdärä Maryam in Bägemdər, where he met Abägaz. The two aristocrats decided to collect historiographic heritage of the Ethiopian rulers. Ḫ.M. sponsored the work of Abägaz, who completed his large collection of Ethiopian royal chronicles in 1785 (Kropp 1989:20, 26). The collection, which incorporated also some other documents and Ḫ.M.'s biography, became commonly known as "Ḫaylu-compillation" (its portions were published in BlunChr; Conti Rossini 1916).

According to Abägaz's record, in the time when unscrupulous political alliances, treason and murder were common, Ḫ.M. always remained loyal to his sovereign and kinsmen and was always on the losing side. During the second part of his life, Ḫ.M. was an ally of *ras* ↗Ali and *ras* ↗Aligaz of Yäǧǧu, and later of *ras* ↗Märəd Ḫaylu and *däǧǧazmač* ↗Zäwde of Goǧǧam. In 1801, Ḫ.M. had to leave his estate in Bägemdər and thereafter lived under Zäwde's protection; after Ḫ.M.'s death, his enemies tried to hinder the translation of his body to Bägemdər (his daughter *wäyzäro* Mərṣit putting them to shame with her verses, Tekle-Tsadik Mekuria in PICES 8, vol. 2, 209). Finally, Ḫ.M. was buried in ↗Mäkanä Iyäsus at Ǝste, in the church he had estalished.

Sevir Chernetsov – Red.

Ḫaylä Mikaʾel Śahlä Śəllase

Märəd azmač Ḫ.M. (ኃይለ፡ ሚካኤል፡ ሣህለ፡ ሥላሴ; d. 1880s) was a Šäwan lord. The youngest son of *nəguś* ↗Śahlä Śəllase of Šäwa and a Muslim woman (MasMis vol. 10, 190), he governed various districts in Šäwa during the reigns of his brother *nəguś* ↗Ḫaylä Mäläkot and of *ras* ↗Darge Śahlä Śəllase.

In 1856, Ḫ.M. was appointed by *aṣe* ↗Tewodros II over Šäwa, with the traditional title of ↗*märəd azmač*. The next year, although he had not joined other rebel nobles and remained loyal to the Emperor, sending him taxes from his province, he was arrested and at the end of 1858 imprisoned in Tamo. This probably happened because of his unwillingness or inability to deal with a revolt led by his brother ↗Säyfu Śahlä Śəllase in eastern Šäwa.

In 1866, when prison guards deserted Tewodros, Ḫ.M. joined his nephew Mənilək (later *aṣe* ↗Mənilək II). In 1876 he was involved in the plot of Mənilək's wife, ↗Bafäna, to increase her power. He rebelled against Mənilək II and took over Ankobär, where he was made *nəguś* of Šäwa. This led to a battle in which Ḫ.M. was wounded and taken prisoner. He was later pardoned by the Emperor, but did not receive any appointment and died without performing any further political role in the country.

Hanna Rubinkowska

Ḫaylä Śəllase I

Early career

Ḫ.Ś. (ኃይለ፡ ሥላሴ, b. 23 July 1892, Ǝǧǧərsagoro near Harär, d. 1975, Addis Abäba), last Emperor of Ethiopia, was beyond question the outstanding Ethiopian figure of the 20th cent. Son of *ras* ↗Mäkʷännən Wäldä Mikaʾel, governor of ↗Harär and first cousin of *aṣe* ↗Mənilək II, and his wife Yäšimabet Ali, he was named Täfäri, Ḫ.Ś. being both his baptismal and regnal name. He was a descendant, through his father's mother, of *nəguś* ↗Śahlä Śəllase of Šäwa.

Ḫ.Ś. received a mixture of traditional church education and tutoring by Catholic ↗Capuchin friars, including André de ↗Jarosseau and an Ethiopian friar, *abba* Samuʾel. After his father's death in 1906, he was summoned by Mənilək to Addis Abäba, where he briefly attended the ↗Mənilək II Secondary School. Clearly destined for high office, he was first appointed governor of Sälale in Šäwa and then of Därasa *awraǧǧa* in Sidamo (in 1908), returning to Addis Abäba following Mənilək's illness in 1909. In 1910, at the age of 17, he was appointed to his father's governorship of Harär. The following year he married ↗Mänän Asfaw, daughter of *ǧanṭərar* Asfaw of Ambassäl in Wällo, and grand-daughter of *ras* (later *nəguś*) ↗Mikaʾel; they were to have three sons and three daughters.

He remained in Harär, with occasional visits to Addis Abäba, until mid-1916, when *ləǧ* ↗Iyasu reassigned him to Käfa – a move evidently dictated by his own desire to control Harär, a key location for the implementation of his policies. Täfäri however remained in Addis Abäba, and his role in the events that led to the deposition of Iyasu on 27 September has never been fully elucidated. This resulted in his elevation to the rank of *ras*, and regent and heir to the throne, under Mənilək's daughter, the childless *nəgəśtä nägäśt* ↗Zäwditu. He was present at the battle of ↗Sägäle, on 27 October 1916, which confirmed the establishment of the new government.

As regent, *ras* Täfäri was nominal head of a government over which, initially at least, he had little control. The final word rested with the Empress, and other leaders – including *fitawrari* ↗Habtä Giyorgis Dinagde, Minister of War and victor of Sägäle, and *abunä* ↗Matewos – enjoyed independent positions of strength. Although Täfäri's cousin and ally ↗Ǝmməru Ḫaylä Śəllase took over the key province of Harär, other governors including *nəguś* ↗Wäldä Giyorgis and later *ras* ↗Gugsa Wäle in Bägemdər, *ras* ↗Ḫaylu Täklä Haymanot in Goǧǧam, and *däǧǧazmač* ↗Balča Śafo in Sidamo, ruled with little reference to Addis Abäba. *Ləǧ* Iyasu remained at large until 1920. Täfäri's strengths lay in his ability to play a waiting game, and to maintain relations with the outside world, notably through the diplomatic missions in Addis Abäba. Gradually, however, he was able to extend his control over the central government, and infiltrate young and relatively educated appointees into key positions, notably those concerned with revenue collection.

Täfäri used his diplomatic contacts and skills to secure Ethiopia's admission to the ↗League of Nations in September 1923, a move which – though it ultimately failed to protect Ethiopia against external aggression – secured the country's formal diplomatic equality with other states, and also supplied Täfäri with leverage in his attempts to control provincial governors through the suppression of slavery, which had been a key sticking point in the battle for admission. Following a visit to Djibouti and Aden in 1922, he embarked in 1924 on a tour of Europe, including France, Italy and the United Kingdom, taking with him a large retinue including *ras* Ḫaylu and *ras* ↗Śəyyum Mängäša.

Diplomatically the trip was a failure, since he was unable to persuade the then colonial powers to allow Ethiopia unrestricted access to the sea through any of their possessions; he was however able to use Ethiopia's membership of the League to force the retraction of an Anglo–Italian accord that had sought, without reference to Ethiopia, to define their respective spheres of influence in the country. The most important result of the visit was in bringing himself and his country to the attention of the European press and public, and indeed to other Africans and people of African descent. The ↗Rastafarian movement in Jamaica took its name from his name and title at that time.

Däǧǧazmač Täfäri, Harär, around 1910; from Hoffman 1948:194

The death of *fitawrari* Habtä Giyorgis in December 1926 enabled Täfäri to take full control of the central government, and over the next few years he asserted his command over the leading provincial governors. In September 1928 he was elevated to the rank of ↗*nəguś*. The defeat and death in March 1930 of the last major independent governor, Zäwditu's husband *ras* Gugsa Wäle, was immediately followed by the death of the Empress herself. On 3 April 1930, Täfäri was elevated to the throne with the title of *nəgušä nägäśt* Ḫ.Ś. I.

Accession, War and Exile

As Emperor, Ḫ.Ś. rapidly sought to consolidate his position, both at home and abroad. He as-

Ḫaylä Śəllase in coronation attire around 1930; photo courtesy of Basler Mission (QQ-34 001 0032)

sumed an aloof and consciously imperial style, which, added to his natural dignity, made a lasting impression on all who met him. His coronation, on 2 November 1930, was designed to present the most favourable impression to the distinguished delegations, especially from the major European powers; the British delegation was led by the Duke of Gloucester, son of King George V. The following year, he promulgated Ethiopia's first written ↗Constitution, a document that both proclaimed Ethiopia's modernity for external consumption, and unequivocally insisted on the emperor as the sole ultimate source of power domestically, arousing some disquiet from members of noble lineages, who viewed him as no more than the first among equals. Contemporary official prints showed the Emperor's authority as descending directly from God to Ḫ.Ś., who in turn transmitted it – in the form of the constitution – to his people. Though a two-chamber ↗parliament was established, this had no direct elections and no more than titular powers (↗Government).

The remaining quasi-autonomous provincial governments were rapidly brought under central control. *Ras* Ḫaylu Täklä Haymanot of Goǧǧam was an obvious target, since his venality made him unpopular in his own domains; he was implicated in a plot to free the imprisoned *ləǧ* Iyasu in 1932 and was imprisoned. The wealthy sultanate of ↗Ǧimma, governed autonomously by its native ruler under an agreement with Mənilək II, was placed under central supervision. These developments were aided by a programme of road construction, and by the first steps to train a modern ↗army. A team of Belgian officers arrived early in 1930 to train the ↗imperial bodyguard, which was to be the nucleus of the new army. A Swedish adviser, General Virgin, recommended the creation of a military academy, established in 1934 at ↗Holota, west of Addis Abäba. Other foreign advisers were recruited, to work in the ministries of education, finance, interior and justice. Particular attention was paid to education and revenue generation. Though the tasks to be undertaken were almost insuperable, Ḫ.Ś. successfully projected the impression of Ethiopia's transformation into a modern state.

Internationally, however, the situation grew steadily more threatening, as the fascist government of Italy finalized plans to conquer Ethiopia from its colonies of ↗Eritrea and ↗Somalia. It remains open to question whether more adept diplomacy on Ḫ.Ś.'s part could have induced France and the United Kingdom to provide effective support against Mussolini's ambitions, though it is likely that these powers would have sacrificed Ethiopia to their European priorities. Certainly, Ḫ.Ś. greatly overestimated the effectiveness of the League of Nations in preventing aggression, and continued to pursue diplomatic attempts to resolve the crisis. Even though these had little impact on the immediate situation, they were important in establishing Ethiopia's moral position in the eyes of the outside world.

Ḫ.Ś. had little military experience, and after the Italian attack on 2 October 1935 he left the army under the command of the minister of war, *ras* ↗Mulugeta Yəggäzu, moving north to Däse in late November. Only in late March 1936, when the military situation was already disastrous, did he move to the front at ↗Mayč̣äw, where for honour's sake and to meet the expectations of his people, he launched a doomed attack. After its failure, and with Ethiopian resistance collapsing, he made his way back to Addis Abäba, where on 30 April he faced one of the most critical decisions of his life: whether to stay and fight, retreating towards the south-west, or to go into exile, and continue the struggle by diplomatic means. The decision in favour of exile, though criticized by some as an abandonment of his country, was unquestionably correct. On 2 May, he left Addis Abäba for Djibouti, where he embarked on a British warship. After a stop in Jerusalem, he travelled to the United Kingdom, which he left to address the League of Nations in Geneva on 30 June.

The speech to the League, drafted by ↗Lorenzo Täʾəzaz, was the most memorable in that organisation's undistinguished history, and dramatically counterpoised the promise of collective security and the horrors inflicted on Ethiopia. Delivered with unquenchable dignity, it established Ḫ.Ś. on the world stage, and presaged the forthcoming ↗World War II. For the following four years, however, he lived in exile in the small English city of Bath, remaining in touch as best as he could with resistance leaders within Ethiopia. Only after Italy's entry into the World War II in June 1940 did he once more gain an international role, when he was flown by the British to Khartoum to help foster resistance to the Italians in Ethiopia. It was only in January 1941, however, that was he able to re-enter Ethiopia, at ↗Omedla on the Sudanese frontier with Goǧǧam, with a small force which included two battalions raised from Ethiopian refugees. On 5 May 1941, aided by the defeat of the main Italian armies to the north and south, he re-entered Addis Abäba and resumed his reign.

The Restored Empire

Ḫ.Ś.'s first task on returning to Addis Abäba was to regulate his relations with the British government, elements within which sought to treat Ethiopia as an occupied enemy territory, or implicitly as a British protectorate. Having already secured a statement by the British government that it would welcome Ethiopia's restoration to independence under his leadership, he asserted his position by immediately appointing a number of ministers, even though his actual exercise of power was still subject to irksome constraints. The British position was first regulated by an agreement of 31 January 1942, which recognized Ethiopia's independence but nonetheless gave the United Kingdom a privileged position within the country, including the exclusive right to appoint "advisers" to the Ethiopian government. Though these included some individuals, such as Daniel ↗Sandford and Wilfred ↗Thesiger, with strong personal connections to Ḫ.Ś., he never permitted them to exercise executive functions; at the same time, he sought to reduce British influence by strengthening his relations with the United States. A second agreement in 1944 removed the special status of the United Kingdom, which however continued to govern the Somali-inhabited ↗Ogaden region into 1948 and the Haud until 1954.

Ḫ.Ś. had also to establish his supremacy over the "Patriots" or *arbäññočč*, Ethiopian ↗Resistance leaders, many of whom welcomed his return, while others regarded him as having deserted his country in its hour of need, and returned on the backs of foreign soldiers. A mixture of skilful conciliation with the imprisonment or even execution of recalcitrants enabled him to re-establish control. The ↗*Wäyyane* rebellion in Təgray in mid-1943, which resulted from a combination of local grievances, could only be suppressed with British help.

Within Ethiopia, Ḫ.Ś. steadily constructed a highly centralized administration, in which even trivial decisions had to be referred to himself, and in which key positions were overwhelmingly held by his own protégés, most of whom were educated Šäwans from relatively humble backgrounds. During the period between 1941 and 1955, *ṣäḥafe təʾəzaz* ↗Wäldä Giyorgis Wäldä Yoḥannəs enjoyed a position almost equivalent to that of a prime minister, while the three brothers ↗Mäkʷännən, ↗Aklilu and ↗Akalä Wärq Habtäwäld also gained influential roles. Ḫ.Ś. made little use of his own family members, save in constructing dynastic alliances through his daughters and granddaughters.

Although the regime's official rhetoric was constructed around a narrative of modernization, with education receiving special emphasis, this equated in practice to the creation of a centralized state, without any effective representation of independent or popular interests. The federation (or "reunion") of the former Italian colony of Eritrea with Ethiopia in 1952 (↗Eritrean–Ethiopian Federation) exemplified both Ḫ.Ś.'s diplomatic skills (notably in enlisting US support, in exchange for agreeing to a US communications base near Asmära), and his failure to recognize the desire of Eritreans to run their own autonomous government, which was reduced to dependence on Addis Abäba by a succession of imperial nominees, without regard to the longer-term political consequences. Similarly, although a revised constitution was introduced in 1955, allowing for the first time for the election of the Chamber of Deputies by universal adult suffrage, no political parties were allowed to form, and parliament as a whole remained only marginal to the political process.

Ḫ.Ś., accustomed since his youth to be lauded as a "modernizer", came during the 1950s to be regarded as the embodiment of an anachronistic political system, all the more evidently by comparison with the populist and anti-colonialist regimes then arising elsewhere in Africa. The first visible break in the façade of benevolent imperial rule came in the ↗coup d'etat of December 1960, when a small group of plotters led by the commander of the imperial bodyguard, ↗Mängəśtu Nəway, seized control of the palace, and announced Ḫ.Ś.'s deposition and replacement by his eldest son, Crown Prince ↗Asfa Wäsän. Though the coup d'état was put down by force, and its leaders killed or executed, the aura of imperial omnipotence was shattered, and for its remaining years the regime was living on borrowed time.

Decline, Overthrow and Death

Throughout the 1960s and early 1970s, Ḫ.Ś. came to be regarded, especially by younger educated Ethiopians, as an increasingly anachronistic figure in a rapidly changing Ethiopia. Although every attempt was made to associate him personally with each modernizing initiative, especially in education, his own mentality remained locked in the early 20th cent. Ethiopia in which he had been raised. The deaths of his favourite son prince ↗Mäkʷännən in 1957, and of his wife Empress Mänän in 1962, intensified his isolation. His political and manipulative skills remained as great as ever, but were decreasingly relevant to the management of a government that had spread well beyond the palace, or of a population that made increasing demands for a level of political participation that his regime was in no position to satisfy. Student demonstrations intensified from the mid-1960s onwards (↗Student movements), and drew the attention at least of the urban population to demands for radical reform, not least in land tenure.

One area in which Ḫ.Ś. continued to exercise considerable skill, and enjoyed important achievements, was foreign affairs. He adeptly positioned himself to benefit from the African decolonization movement of the 1950s and 1960s, profiting from the role of an elder statesman whose own resistance to Italian ↗imperialism had aroused the admiration of fellow Africans in the 1930s, and making common cause with African nationalists whose own mentalities and regimes were actually very different from his own. His moment of greatest triumph was in May 1963, when he hosted the summit of independent African leaders that established the ↗Organization of African Unity, and secured its headquarters for Addis Abäba. This success, together with the recognition of the shared interests of Ethiopia and of most post-colonial African states in maintaining their existing frontiers, was of enormous benefit in securing African and global diplomatic support for Ethiopia in its struggles against Somali irredentism and the growing secessionist threat in Eritrea. Much of his time in his later years was spent in state visits and attempts to mediate African conflicts, to the detriment of attention to domestic issues. He continued to seek military aid from the United States, where however his influence gradually declined, while maintaining at least correct relations with the Soviet Union and its satellite states, as well as with radical Arab nationalists.

His downfall in 1974, though prompted in part by ↗famine, was due more to his own age and declining powers, and especially to the incapacity of the court administration that he ran to cope with the sudden release of pent-up demands from urban groups of every kind. All of his efforts to manage and manipulate the chaotic events of the first half of 1974 (↗Revolution) came to nothing, until on 11 September, with all of his key agents already removed from power, he was simply deposed and driven into detention in the back of a small car. Early in 1975, he was secretly murdered by the new regime (↗Provisional Military Administrative Council), and his body buried beneath the bathroom in one of the buildings in the ↗Jubilee palace used by the new dictator, Mängəśtu Ḫaylä Maryam. Their whereabouts revealed after Mängəśtu's overthrow in 1991, his remains were disinterred and reburied in 2000 in the vault of the Qəddus Śəllase cathedral in Addis Abäba that he had prepared for them.

Character, Significance and Legacy

Ḫ.Ś.'s significance and legacy will long be debated, and only a preliminary assessment can be attempted here. His public face, honed over many years of deliberate self-control, is less contentious. Immediately on ascending the throne in 1930, he assumed an aloof and dignified style,

Ḫaylä Śəllase I surrounded by his family, Crown Prince Asfa Wäsän to his right; photo ca. 1965

which maximized his imperial aura; normally dressed in military uniform, he forsook the traditional dress of an Ethiopian nobleman that he had usually worn during the regency, though in later life (especially on diplomatic occasions) he appeared increasing in an ordinary western suit. Numerous accounts from foreigners testify to his personal charm. There is no reason to regard his lifetime devotion to the ↗Ethiopian Orthodox Täwaḥədo Church as anything but sincere.

This public persona masked an acute political mind, which closely conformed to the leadership style advocated in Macchiavelli's *The Prince*. He conceived the art of rule essentially as the manipulation of individual human beings, in which he was extremely adept. He was cautious and secretive, and – even during the regency period, when he was viewed as the leader of the modernizing tendency within the government, as against more traditional figures – he rarely took bold initiatives. His style was instead to encourage others to take such initiatives, whereupon he would himself act as an ostensibly neutral arbiter, without evidently taking sides, or assuming direct responsibility. It was an inclusive form of leadership, which encouraged different factions and individuals to work within the imperial system, while at the same time enabling him to remain central to the process, by playing off one faction against another. Keeping his options open, he very seldom resorted to brutal measures, even against those who had plotted against him – the leaders of the failed coup d'état of December 1960 providing a rare exception. Disgraced politicians were instead relegated to titular positions, from which they could aspire to return to imperial favour.

Compared with other leading Ethiopians of his generation, he was always acutely aware of the international dimension, and constantly sought diplomatic support to strengthen his position within the domestic political arena. His courting of the allied legations at the time of the 1916 ↗coup d'état against the Iyasu government set a pattern that continued. At the same time, he remained entirely Ethiopian in his own intellectual formation and allegiance. He never succumbed to the attractions of foreign ideologies, and when, as his regime was collapsing in early 1974, he had the option of seeking an honoured and comfortable exile, he refused it. He lived and died an Ethiopian.

As early as the 1920s, he was widely regarded as financially acquisitive, and in the later years of his reign, rumour ascribed to him a vast overseas fortune. There is however nothing to indicate the truth of such assertions. At the time of his wartime exile in 1936–40, he and his entourage lived in extremely straitened circumstances, while if he did possess a large fortune at the end of his life, he certainly took no steps to enjoy it. It is more likely that, in keeping with his highly personal sense of power, he simply failed to distinguish between his personal wealth and that of the state. Surprisingly, perhaps – and contrary to the dynastic clauses of the 1931 and 1955 constitutions – he never took any active steps to establish a dynasty. Though his two elder sons held titular provincial governorships, the Crown Prince in Wällo and prince Mäkʷännən in Harär, neither they nor any other of his descendants were given the opportunity to acquire the practical experience of government on which his own career had been founded. Instead, they were reduced to the role of idle appendages of the court.

Ḫ.Ś.'s broader historical role was that of a state-builder, adapting the legacies of his predecessors Tewodros II, Yoḥannəs IV and Mənilək to the circumstances of the central 50 years of the 20th cent. He readily appreciated and adopted those modern technologies, including aircraft, improved communications, taxation systems, and the bureaucracy, that could be used to strengthen imperial rule; but he had no evident conception of a modern state, as an organization that rested not just on hierarchical structures of rule, but on ideas and institutions that could link the population to the means by which they were governed. "Nation-building", insofar as it was pursued at all, took the form only of the extension of political and social forms characteristic of the central highlands, such as Christianity and the Amharic language, to other parts of the country.

The Italian war apart, Ethiopia was far more peacefully governed during his reign than either before or afterwards; and though this was at one level the result of benefiting from the pause between the ending of resistance to central government led by regional lords, and the rise of resistance derived from popular regional and ethnic nationalisms, it also reflected Ḫ.Ś.'s own lack of vindictiveness and skilful management of dissent. At the same time, he was quite unable to appreciate or adapt to the demands for popular engagement in political life, which in his own time were most evident in Eritrea and which subsequently spread to other parts of the country. Nor could he recognize ideologically based demands for social change, most powerfully expressed in the slogan "land to the tiller", that led to his own overthrow by a Marxist military regime. Many of the subsequent problems of Ethiopia were inherent in the state that he had done so much to form. While his status as one of Ethiopia's greatest rulers is assured, the exact nature of his rule and legacy is likely to remain deeply contested.

Ḫaylä Śəllase Gugsa

Ḫ. (ኃይለ፡ ሥላሴ፡ ጉግሳ, b. 1900, d. 1974, Addis Abäba) was a noble and collaborator of the Italians. He was the son of *ras* ↗Gugsa Arʾaya. In May 1934 *aṣe* ↗Ḫaylä Śəllase I appointed *ras* ↗Śəyyum Mängäša as provisional military commander for all Təgray in the event of war. He also reorganized the region's administration by appointing Ḫ. over eastern Təgray, excluding Aksum, Bora (Šinašša) and Säläwä, which were given to Śəyyum. Ḫ. reacted by secretly meeting with the Italian authorities in Asmära. On 27 May 1934 he suggested to them that, once they invaded Ethiopia, he would open the road for them from Mäqälä down to Däse. This act of treason had far-reaching implications for ↗Mussolini's decision to initiate the war (↗Italian war 1935–36).

Unsuspected by the Emperor, Ḫ. was put in charge of a central unit in the line of defense planned in September 1935. Upon receiving the appointment, he immediately revealed its details to the Italians. In response he was instructed by the Fascists to continue as normal until Ethiopian and Italian forces met. However, on 9 October 1935, six days after the Italians invaded Təgray, Ḫ. panicked and joined the opposition forces, a move that infuriated the Italians. In prematurely exposing his betrayal, he took away the Italian's element of surprise. Though they could now take Təgray quite easily – Ḫ. did open the main road for them – they could not beat, as they had expected, a substantial number of Ethiopian soldiers and had to resort to guerrilla tactics for the rest of the year. The Italians nevertheless continued to use Ḫ. in their campaign. Although they proclaimed him governor of Təgray on 16 October 1935, in practice they had little confidence in his abilities. During the entire Italian occupation of Ethiopia, Ḫ.Ś. was confined to Addis Abäba, where he lived in luxury, and it was only in 1938 that the Fascists promoted him to *ras*.

During the British campaign to liberate Ethiopia, Ḫ. continued to serve foreign interests. On 17 April 1941, he appeared in British-occupied Asmära and reported to their authorities. He repeated the same arguments he previously made to the Italians, that he was a representative of Təgrayan nationalism oppressed by a Šäwan emperor. At that time the British officers in charge of Eritrea were themselves contemplating the idea of a separate Təgrayan entity (↗British

Military Administration). They recognized Ḫ. as a *ras* and began financing his renewed government in eastern Təgray, but when he failed to pacify the Azäbo Oromo in his territory, the British confined him to Asmära on 18 May 1941. They refused, however, to hand him over to the Emperor, who considered putting the traitor on trial as an act necessary for both national recuperation and for re-establishing central authority over eastern Təgray. On 30 July 1941, Ḫaylä Śəllase filed a legal demand for Ḫ.'s extradition but the British officers in Asmära claimed they had promised Ḫ. never to hand him over to the Emperor (the documents available in the British archives attest, to the contrary, that he was specifically told there would be no such British commitment). Based on this claim, the British War Cabinet exiled Ḫ. to the Seychelles on 24 October 1941, from where he was allowed to continue corresponding with his men in eastern Təgray until a demand by the Emperor from December 1942 halted this activity. After four years of continuous pressure from the Emperor, London finally agreed to hand Ḫ. over for trial in Addis Abäba on September 1946. The trial lasted from August to October 1947 and Ḫ. was condemned to death, later commuted to life in prison. In September 1974 he was released by the new *Därg* regime and died in Addis Abäba some time later.

Ḫaylä Śəllase I Secondary School

The Ḫ.Ś. was the first secondary school in Ethiopia. In popular parlance, it was known as Kotäbe, after the neighbourhood in which it stands. It was opened on 23 July 1943, coinciding with the Emperor's 51st birthday, on the site of an agricultural research station that the Italians had built during the Occupation. Much of the school's initial equipment was also supplied by the Office of the Custodian of Enemy Property, while the food for the boarding students was provided by the Imperial Palace.

The school was modelled on the English public school and its management remained in foreign hands until 1964, alternating between the British (through the British Council), the Canadians (through the Sudan Interior Mission) and the Swedes. Starting in 1948, the students also began to take the British matriculation examination, the General Certificate of Education (G.C.E.), a pattern that was followed by other secondary schools until superseded by the Ethiopian School Leaving Certificate Examination (E.S.L.C.E.).

The school's first batch of students had had their prior education either inside Ethiopia before the Italian War or while in exile in Europe and the Middle East during the Occupation. Subsequently, sons of provincial chiefs and scholarship students from other African countries (Kenya, Tanganyika, Uganda) also joined in. The school, which was noted also for its rich extra-curricular life (with clubs numbering 16), served as a springboard for higher education, sometimes even before the completion of the courses at Kotebe, and as a major source for recruitment into the ↗Harär Military Academy, the Imperial Air Force and the Harär Teacher Training Institute.

The graduates of the school ultimately became prominent members of the country's political and cultural elite in the 1950s and 1960s. These included ministers (↗Ǝndalkaččäw Mäkʷännən, ↗Kätäma Yəfru, Mika'el Ǝmməru and Zäwde Gäbrä Śəllase), writers (↗Mängəśtu Lämma) and one of the leaders of the abortive 1960 coup, ↗Gärmame Nəway.

The Ḫ.Ś remained a boarding school even after all other boarding schools became day schools in 1961. It had its first headmaster, Zäwdenäh Yəmtatu, in 1964. A satellite primary school, subsequently named Däǧǧač Wändyerad School, was opened through the initiative of Ḫ.Ś. students, who raised the funds to start the school. In 1968, the Ḫ.Ś. was transformed into a teacher-training college, known as the Kotebe College of Teacher Education.

Bahru Zewde

Ḫaylu

Ḫ. (ኃይሉ) was the name of several important figures active in the period before and during the reign of *aṣe* ↗Tewodros II.

The first to be mentioned is the Emperor's assumed father, Ḫaylu Wäldä Giyorgis, a lesser ruler from the early-19th-cent. Qʷara, who in all probability was also the father of *däǧǧazmač* ↗Kənfu, who eventually brought Tewodros up. Not much is reported about him, chronicles of the time giving partially controversial information on his role and family situation. His first wife, Wälättä Täkle, was a niece of *däǧǧazmač* ↗Maru of Dämbəya and he had in all probability two sons by this marriage, Kənfu and Gäbru. He probably had other wives, but only one more of them is reported in the sources, ↗Attəṭägäb, a low-born woman from Gondär who bore him a third son, Kaśa (future *aṣe* ↗Tewodros). Probably, Ḫ. died soon after Kaśa's birth in the early 1820s as he does not figure actively in any of the chronicles or sources after this time.

Another Ḫ. we know from the time is *käntiba* Ḫ., a close advisor and perhaps godfather to Tewodros, who was allowed to participate in a church council (MonVidTheo 27). In 1854 Giustino De ↗Jacobis was placed in his custody. In 1867 *käntiba* Ḫ. became disconnected from the Emperor and is not mentioned in the sources of later times.

An *azzaž* Ḫ. was one of Tewodros's military leaders. He fell in a battle, pursuing the troops of ↗Bərru Goššu in May 1854 (ZanLitTheod 17).

Two years later, a certain *baša* Ḫ. was appointed governor of Goǧǧam along with *ras* ↗Əngəda.

Däǧǧazmač ↗Ḫaylä Märyam of Səmen is also often mentioned in the sources under the abbreviated form of his name, Ḫ.

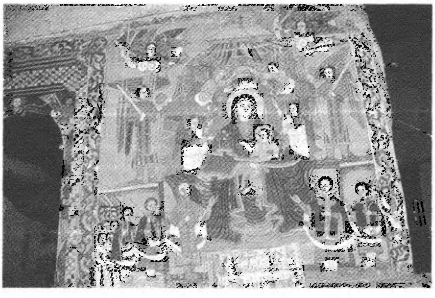
Ḫaylu Käbbädä

Däǧǧazmač Ḫ.K. (ኃይሉ፡ ከበደ, b. 1893/94, d. 1937, Walah) was a resistance leader during the ↗Italian war of 1935 and the occupation years. The son of *wag šum* ↗Käbbädä Täfäri, on his mother's side he descended from *ras* ↗Aligaz of Yäǧǧu and was married to the family of *aṣe* Yoḥannəs IV. Ḫ.K. lived in the court of *ras* Täfäri Mäkʷännən (later *aṣe* ↗Ḫaylä Śəllase) and joined the Parliament as a member of the Senate in 1931. At the end of 1934, with the Italian conflict near, he was sent to Wag to support his father and to organize the war effort. In March 1935, following the orders to prepare for mobilization to the forces of Wag, he travelled with his group of 300 armed fighters to Koräm, where there was a telegraph line to communicate with Addis Abäba.

Before the mobilization edict against the Italians was issued in November 1935, the forces of Wag under Ḫ.K. had already started their northward march as vanguard forces to garrison ↗Ambalage. On the defection of *dağğazmač* ↗Ḫaylä Śəllase Gugsa in October 1935, Ḫ.K. was ordered by the Emperor to proceed to Mäqälä, but later withdrew because of the approach of heavy Italian forces. In early November 1935, two Italian aeroplanes bombed the forces of Wag near Ambalage, in what was the first serious action of Italian aviation.

In early December 1935, Ḫ.K. was again ordered to lead his forces towards Tämben, whose capital city ↗ᶜAbiy ᶜAddi had fallen to the Italians. On 18 December 1935, the forces of Wag engaged the well-fortified Italian army and recaptured the strategic peak of Amba Ṣällare and ᶜAbiy ᶜAddi. This victory, which was ac-



Virgin Mary with donors: ᶜAlämayyähu Dästa, Käbbädä Täfäri, Ḫaylu Käbbädä and Täfäri; cloth mural, western wall, Säqoṭa, Mädhane ᶜAläm church, ca. 1915; photo 1993, courtesy of Michael Gervers claimed by the Amharic weekly *Bərhanənna Sälam*, strengthened the morale of the Ethiopian forces in the north. It boosted the heroic zeal of the Ethiopian army to repeat a second victory in what later came to be known the First Battle of Tämben, in January 1936. However, in February 1936, on the defeat of the Ethiopians in Tämben, the forces of Wag suffered the worst casualties due to Italian air superiority. Following the battle of ↗Mayč̣äw on 31 March 1936, Ḫ.K. and his forces went to the countryside to continue with the resistence.

Däǧǧazmač Ḫ.K. then organized one of the earliest patriotic ↗Resistance movements, establishing his quarters in the valley of the Täkkäze in Dəhana, Wag. The Italians, who by then had lost control of the rural areas of Wag, regarded him as their strongest enemy. Thus, in early September 1937, aiming at an attack on Ḫ.K.'s forces from different directions, they mobilized a large army from Təgray, Lasta and Koräm, across the Ṭərari River, supported also by the Rayya-Azaboo Oromo. Although the forces of Wag scored the first victories, the Italians overpowered them on the last major battle on 22 September 1937 at Walah, near ↗Säqoṭa, capital of Wag. Ḫ.K. was wounded and died soon afterwards. His forces retreated in disarray, whilst the Rayya-Azaboo Oromo inflicted heavy damage, burning down churches and villages and looting the countryside as far as the Täkkäze valley.

Ḫ.K.'s body was transported by the Italians to Säqoṭa, barbarously mutilated and his head posted on a long pole for three days both at Säqoṭa and Koräm, to frighten the people into submission. They dropped leaflets to mark their victory and as a warning to other patriotic leaders. The surviving patriots of Wag rallied under Ḫ.K.'s wife, *wäyzäro* ↗Šäwanäš Abrəha, and moved to Qʷalisa, beyond the Täkkaze into Bägemdər, continuing the struggle.

Wudu Tafete

Ḫaylu Täklä Haymanot

Ras Ḫ. (ኃይሉ፡ ተክለ፡ ሃይማኖት, birth name Śəyyum, "horse names" Abba Ṣäḥay, Abba Ḫayyal, Abba Tänna; b. ca. 1868 [?] Mänqʷärär, Däbrä Marqos, d. 2 May 1951) was a controversial and important Goǧǧame figure active during the first part of the reign of ↗Ḫaylä Śəllase I.

Ḫ. was the third son of *ləǧ* Adal Täsämma (↗Täklä Haymanot). At the age of 14 he was named *fitawrari* and appointed governor of Däga Damot. In 1896, he was promoted to *däǧǧazmač* of Mäč̣č̣a. On the death of his father in 1901, *aṣe* Mənilək II chose him, before his half-brothers ↗Bäläw and ↗Bäzzabbəh, as his successor. The following year, accused of having falsified a seal, he was imprisoned and replaced by Bäzzabbəh. Released in December 1906, he was made *ras* and was reappointed over Goǧǧam. He adopted then the name of Ḫaylä Iyyäsus II, in remembrance of his ancestor Ḫaylä Iyyäsus I "the Great". This name, "Ḫaylä", he would keep until death. In 1911, he married his daughter Säblä Wängel to *abeto* ↗Iyasu.

On the rise of *ras* Täfäri Mäkʷännən (↗Ḫaylä Śəllase I) in 1916, Ḫ. adopted a calm but diffident approach. Later, during the campaign of Däse which ended with the capture of Iyasu, he submitted formally to the authority of the new regent (June 1921). However, Täfäri included him, along with many other dignitaries whom he wanted to watch, in the delegation that visited Europe in 1924. Having passed under the influence of the Italians around 1928, Ḫ. helped Iyasu to escape in 1932. After that he was detained and sentenced to prison, but through his agents he could continue to manage his properties and interests. While fleeing Ethiopia to Djibouti in 1936, Ḫaylä Śəllase first took Ḫ. along with him but later freed him in Dərre Dawa.

During the Italian occupation, Ḫ. collaborated with the occupants, who paid him significant subsidies, while maintaining contacts with the resistance. For a short period, in February 1941, Italians gave him back Goǧǧam. On the return of Ḫaylä Śəllase he surrendered in Däbrä Marqos (April 1941), but the Emperor sent him to Addis Abäba under house-arrest. Shortly after, during the trial of *däǧǧazmač* Bälay Zälläqä and his own son, Mammo Ḫaylu, both accused of sedition, the Emperor obliged him to be a member of the jury (Greenfield 1965). After a long disease, Ḫ. died and was buried in Däbrä Marqos. His

Ras Ḫaylu Täklä Haymanot of Goğğam, from Hartlmeier 1953:162

family enjoyed for a long time an unquestionable prestige in Goğğam.

Very rich, active in several commercial operations, open to foreign travellers and married several times, Ḫ. appears as a picturesque early-20th-cent. figure rather than the odd and tyrannical enemy of progress that has often been depicted. He was also a typical example of the traditional Christian Amhara and Təgrayan aristocracy. Like a number of local princes, he never accepted the hegemonic policies of the house of Šäwa, nor did he ever abandon his own political ambitions over Ethiopia. There is hardly any work dealing with contemporary Ethiopia or a travel book written between 1920 and 1950 where he is not mentioned.

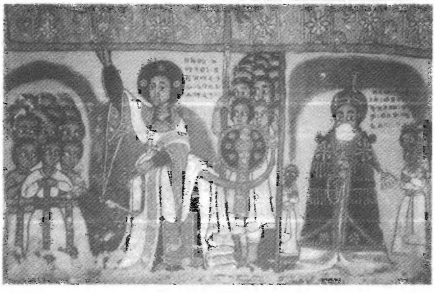
Ḫaylu Täwäldä Mädḫən

Däğğazmač Ḫ. (ኃይሉ፡ ተወልደ፡ መድኅን, nicknamed Habal, 'skew-eyed' [s. RubActa II, 63]; d. 17 July 1876, Wäkki Dəbba, Ṣäʿazzäga) was a local lord and an ally of *aṣe* ↗Tewodros II. A member of the local nobility of ↗Ṣäʿazzäga in Ḥamasen, he became in the 1830s governor of Ḥamasen with the title of ↗*däğğazmač*. Whilst in office he did his best to consolidate and enlarge his control over the province, an ambition cherished by many pretenders. Ḫ. was prudent enough to rely on the rising fortune of Tewodros II.

In September 1858, Ḫ. fought in Ḥamasen on the Emperor's behalf with *däğğazmač* Agäw Nəguśe (↗Nəguśe Wäldä Mikaʾel) and later pushed back the Egyptian advance, remaining completely loyal to Tewodros. He maintained his loyalty for long and as late as on 3 October 1867 ↗Ǝmnätä Maryam wrote to Antoine d'↗Abbadie that "*Däğğač* Ḫaylu is the only one loyal to the king" (RubActa II, 335). However, as the imminent downfall of Tewodros became obvious, Ḫ. wrote on 17 November to *ḫidīw* ↗Ismāʿīl Ibrāhīm asking for Egyptian support against his Christian rivals. With the arrival of the British expeditionary corps his loyalty toTewodros vanished completely and he joined Kaśa Mərç̣a (the future *aṣe* ↗Yoḥannəs IV), who had declared himself independent ruler of all Təgray.



Däğğazmač Ḫaylu Täwäldä Mädḫən of Ḥamasen and his wife Warka; diptych found in 1868 in Mäqdäla, painting on wood, 19th cent.; London, the British Museum (inv. Af 1979 01.3130); photo 1995, courtesy of Michael Gervers

In December 1868 Kaśa Mərça imprisoned Ḫ. and appointed *ras* ↗Wäldä Mika᾽el Solomon to rule Ḥamasen instead. In March 1876 Yoḥannəs IV once again appointed Ḫ. and dismissed Wäldä Mika᾽el. The latter, though, attacked Ḫ., who was killed on 17 July 1876 in the battle at Wäkki Dəbba near Ṣä῾azzäga (in the same battle, a Swedish misionary Per Erik Lager was killed, for which Wäldä Mika᾽el later apologized, s. ArEvang 197–201; RubActa III, 282).

Sevir Chernetsov

Ḫaylu Wäldäyäs

Ḫ.W. (ኃይሉ፡ ወልደየስ, b. Wälläga, fl. in the first decades of the 20th cent.) was one of the pioneers, together with ↗Bälaččäw Yəmär, of Ethiopian folk-painting, or so-called tourist painting, in the early 1930s.

Believed to have come from a high-ranking family, Ḫ.W. started his career by painting scenes from Ethiopian everyday life. He sold many of his paintings to the members of foreign delegations who were attending the coronation of *aṣe* ↗Ḫaylä Śəllase I in 1930. He became famous for his portraits of important personalities, such as Theodore Roosevelt, King Fārūq I of Egypt or Leopold III of Belgium. Among the subjects of his works were the first landing of an aeroplane in Addis Abäba in December 1929, the animal fable *Cats and Mice* and a banquet given by *aṣe* Ḫaylä Śəllase I. Adolf ↗Jensen bought up a large number of Ḫ.W.'s paintings and deposited them at the ↗Frobenius Institute. Ḫ.W.'s pictures can also be found in several European museums (e.g., the Lindenmuseum in Stuttgart).

Girma Fisseha

Ḫaylu Wänd Bäwässän

Ras Ḫ. (ኃይሉ፡ ወንድ፡ በወሰን, fl. ca. 1791–1818) was the son of *daǧǧazmač* ↗Wänd Bäwässan of Lasta, one of the king-makers in the early part of the ↗*Zämänä mäsafənt*, and himself an important political figure.

Ḫ. became governor of Lasta in 1791/92. He demonstrated his opposition to *ras* ↗Aligaz of Yäǧǧu by releasing *aṣe* ↗Täklä Giyorgis from detention in Əmäkina, where he had been imprisoned by Aligaz in 1789, after a failed attempt to regain power.

Ḫ. stayed in good terms with Täklä Giyorgis and his family. In 1810 he is reported to have visited the court of his heir, *ras* Wäldä Śəllase, where he received gifts of firearms.

To defend Lasta from the constant raids of the Yäǧǧu Oromo, Ḫ. established closer relations with *ras* ↗Wäldä Śəllase of Təgray and *wag šum* ↗Kənfu of Wag. They allied to defend their regions from Yäǧǧu Oromo incursions. In 1808 they mobilized their forces, attacked and killed Goǧǧe Aligaz, the Yäǧǧu chief and son of *ras* Aligaz.

Ras ↗Gugsa Märsa, the Yaǧǧu king-maker, repeatedly attacked Lasta in an attempt to suppress Ḫ.'s resistance. The last attempt in 1818 failed when Ḫ. avoided capture by withdrawing to his mountain stronghold of ↗Wähni Amba.

Wudu Tafete

Ḫaylu Yosedeq

Ras Ḫ.Y. (ኀይሉ፡ ዮሴዴቅ, d. 1795, Nazret) was ruler of ↗Goǧǧam and an important player during the ↗*Zämänä mäsafənt*.

Born of *däǧǧazmač* ↗Yosedeq Wäldä Abib and ↗Wälättä Əsra᾽el, daughter of *ətege* Məntəwwab (↗Bərhan Mogäsa) and sister to *aṣe* ↗Iyasu II, Ḫ.Y. succeeded his father as governor of Goǧǧam. He was given the rank of *ras* by *aṣe* ↗Täklä Giyorgis (BTafA 416). Following this, he made his capital at ↗Bəčäna and was one of the principal actors during the *Zämänä mäsafənt*.

Involved in the long struggle that removed and installed the rulers claiming to be the heirs to the Solomonic throne, Ḫ.Y. was also engaged in continous raids, battles and alliances with princes and kings. He confined Iyasu III in his own castle and ruled beyond Dangal Bar (Täklä Iyäsus 1975:79). He went to war against *aṣe* ↗Həzqəyas, siding with *aṣe* ↗Täklä Giyorgis I.

Later, however, he abandoned Täklä Giyorgis and conspired with others to install Iyasu, thus effecting the break-up of the Gondärine monarchy. He also nursed personal enmity with *däǧǧazmač* Ḫaylu Əšäte, who was his kinsman, although at times they were reconciled (Tekle-Tsadik Mekouria in PICES 8, vol. 2, 207).

Ras Ḫ.Y. died suddenly in Nazret (Goǧǧam) on 30 *Sane* in the year of the Creation of the World 7287 [5 July 1795] (BlunChr 435). He was buried at Däbrä Iyäsus (Täklä Iyäsus 1975: 83). Known for his love for churches, he built, among others, Däbrä (Mäkanä) Iyäsus in Nazret, Ǧəb Amba in Bäränta, Ṣəd Maryam in Qəmbʷat, Yägäwärä (Qʷəsqʷam) in Liban, Yädäränä in Gozamen, Mänkusä Gäbrəᵓel in Ṭähənän – still today existing – and sponsored church paintings. In Bəčäna he commissioned the well-known artist *aläqa* Asadu to draw St. George on a horse. He acted as a model for the artist by mounting personally on a horse and demonstrating to the artist how the horse lifted its hooves (Täklä Iyäsus 1975:81).

Ḫ.Y. had five children: his successor *däǧǧazmač* Mared, born to Məskäb, Dənqənäš, born to Malidama, Fasil, Yawəbdär and Wälättä Giyorgis. His counsellors were *däǧǧazmač* Walta, *käntiba* Iyoram, *fitawrari* Gigar and *fitawrari* Haleltu (*aläqa* Täklä Iyäsus [Täklä Zäbəḥerä Goǧǧam] 1975:83). The chronicler paints Ḫ.Y. as a kind and righteous man and calls him "the nourisher of the whole world" (BlunChr 435).

Fentahun Tiruneh

Haymanot mäsiḥawit

H.m. (ሃይማኖት፡ መሲሐዊት, 'Christian Faith' or 'Messianic Faith', i.e., 'the Faith Pertaining to the Anointed One'), is a concise and precise Gəᶜəz treatise, where the faith of the Unctionists (↗ *Qəbat*) is systematically exposed. The text, attempting an explanation as to what anointment or unction means to Jesus the Son of God, was probably written during the reign of *aṣe* Fasilädäs (1632–67), or perhaps even earlier. In any case, according to the H.m. itself (Getatchew Haile 1990:35), the text is the decision of an ecclesiastical council summoned to discuss the question of the Unction of Jesus Christ on 23 June 1655 at ↗Aringo, in the presence of *aṣe* Fasilädäs.

The H.m. is the earliest elaborated exposition of the problem originating from the initial controversy over the significance of the "unction" (*qəbᶜat*) of Jesus Christ. The subject matter is the question of unction and its relation to the heresy of ↗Nestorius and the formula of faith adopted at the council of ↗Chalcedon; other heresies, such as those of Sabellius, Macedonius and Arius, are also reviewed and condemned. Although strictly keeping to the *Qəbat* position, the treatise gives an evidence on all the three schools of ↗Christology which emerged in the first half of the 17th cent.

As recorded in the Chronicle of Susənyos, the definition of the Unctionists' faith was first uttered by the Emperor himself (cf. Getatchew 1990:vii [tr.]), probably in 1612/13 or in 1619/20: "Unction for Our Lord and Saviour Jesus Christ is the grace of the Holy Spirit given to his humanity at the time of the union of humanity and divinity. Although he gives grace to all in his divinity equal with the Father and the Holy Spirit, he received grace in his humanity to give it to his brothers, the children of Adam. The grace which he received from the Holy Spirit was not by measure, as in the case of the Prophets and the Apostles, but without measure [...] This unction is like the grace of the Holy Spirit which makes the martyrs firm at the court of martyrdom and the righteous strong at the time of their strife with devils in the wilderness, and which assists the preachers in their preaching" (PerChron 237f. [text]). In 1621/22, passages of the treatise *Mäṣḥetä ləbbuna*, 'Mirror of Intelligence', are clear evidence of the same discussions (cf. Cerulli 1960:xiiff.).

From an historical point of view, the Unctionists' faith might be considered a consequence of the attempts by ↗Jesuit missionaries in the 16th–17th cent. to put the ↗Ethiopian Orthodox Church under the suzerainty of the Roman Pope. Although the Emperor had traditionally the last word in any dispute, including theological, this time he did not, and not all monastic leaders went quietly along with this definition. The attempt to convert and the teachers' forceful reaction created a schism in the Ethiopian Church, causing the emergence of three schools: the *Qəbat*, maintaining that Christ became the natural Son of God by the unction or anointment of the Holy Spirit (*bäqəbᶜat wäldä baḥrəy*); the ↗*Ṣägga* (↗*Yäṣägga ləǧ*) or ↗*Sost lədät*, teaching that Christ at the third birth became the incarnated Son of God by grace (*bäṣägga*); and the ↗*Täwaḥədo* or ↗*Karra haymanot*, believing that the Son himself is unction and that Christ became the natural Son of God by unity of the flesh with the divinity (*bätäwaḥədo wäldä baḥrəy*).

The H.m. quotes extensively verses from the Old and New Testaments that refer to unction (as Susənyos did) and the works of the Church Fathers as preserved in the ↗*Haymanotä abäw* and the ↗*Qerəllos*. Interestingly, the other schools rely on the same sources and only differ in their interpretations.

Preserved either as an independent work by itself, or within other compositions (s., e.g., Getatchew Haile in PICES 6, or Guidi 1893, 1900-01), the text of the H.m. has been published on the basis of mss. Manchester, John Rylands Library, Eth. MS 1; EMML 2163; Paris, BN, Éth. 149; and Ṭānāsee 53 = Kebrān 53 (s. Getatchew Haile 1990:i (text), xiiif. [tr.]).

Getatchew Haile

Haymanot rətəᶜət

H.r. (**ሃይማኖት፡ ርትዕት**, 'Orthodox faith') is a Gəᶜəz theological treatise probably written by *ᶜaqqabe säᶜat* Käbte, the prominent scholar of ↗Exegesis in 18th-cent. Gondär. Named after its *incipit* ("... we shall begin by the help of God writing the matter of Orthodox Faith"), the H.r. is concerned with five major points of the Orthodox doctrine (some of them are the same, though different in order, as in ↗*Amməstu aᶜəmadä məsṭir* texts): belief in the Father, belief in the Son, belief in the Holy Spirit, belief in the Church and belief in the Resurrection. In a manuscript, presently in possession of the author of the article, the work is entitled "The Treatise [*məᶜəlad*] of *ᶜaqqabe säᶜat* Käbte, the Five Pillars of Mystery [*Amməstu aᶜəmadä məsṭir*] he composed". The manuscript previously belonged to a traditional scholar of ↗*andəmta*, most probably an adherent of the ↗*Ṣägga* teaching. However, it is difficult to say whether Käbte followed the *Ṣägga* school. According to Admasu Ǧämbäre (1961/62:303), Käbte represented the ↗*Qəbat* position (*bäqəbat yäbaḥrəy ləǧ*). In any case, the assumption "that the H.r. is originally a treatise of the Adoptionists [*Ṣägga*]" (Getatchew Haile in PICES 6, 208) seems questionable, for the essential statement of the text hardly confirms it: *Ḫadärä laᶜəlehu mänfäs qəddus... wäzəntu ḫədrätu täsämyä qəbᶜatä* ('The Holy Spirit dwelled upon Him [the Incarnate Son] ... and this dwelling was called Unction').

The work is arranged in the form of a fictitious dialogue with alternation of questions and answers, e.g.:

> Question: If anyone asks how faith can be one while there are five ["objects" of belief]?
> Answer: We shall say to him ...
> Question: Do you have evidence from the Scriptures, or is it your own invention?
> Answer: We say to him: yes we have ..., etc.

As usual in this kind of works, the evidence presented by the H.r. is fetched from the ↗Bible and patristic literature.

Gəᶜəz text of the H.r. is preserved in mss. EMML 632 (19th cent.) and 6983; London, BriMus Add. 16199; Cambridge, University Library, Or. 1801 (19th cent.); an Amharic version is preserved in EMML 1131 (19/20th cent.).

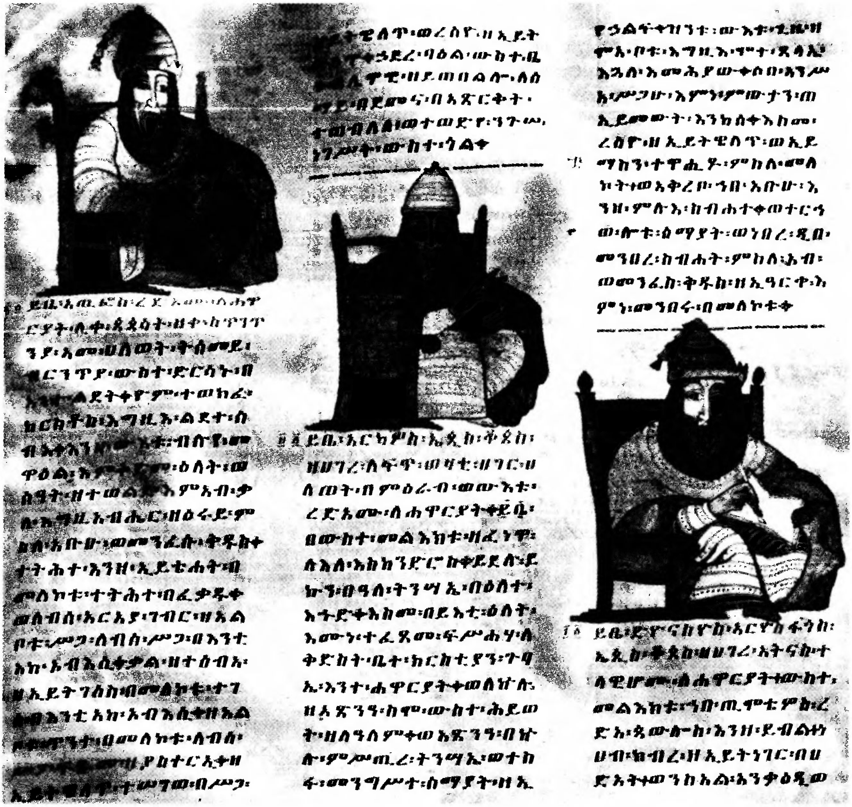
Fisseha Tadesse Feleke

Haymanotä abäw

The H.a. (**ሃይማኖተ፡ አበው**, 'Faith of the Fathers') is the title of the Gəᶜəz version of a large Arabic compilation of writings of early Church Fathers and later Patriarchs of Alexandria and Antioch. A section is devoted to anathematize any deviation from what they confess. The work



Folio from a 17th-cent. ms. of the *Haymanotä abäw* showing Church Fathers; Čäläqot, Śəllase Church, fol. 12r; photo 1993, courtesy of Michael Gervers

mainly deals with the doctrines of the Trinity and Incarnation and its main goal is to defend the non-Chalcedonian ↗Christology (Bandrès 2003; Cowley 1998:285). Translated from an 11th-cent. Arabic Coptic florilegium اعتراف الآباء (*Iʿtirāf al-abāʾ*, 'The Confession of the Fathers', s. GrLit II, 321ff.), the H.a. has become part of the corpus of patristic and post-patristic literature in Ethiopia, the so-called **የሊቃውንት፡ መጻሕፍት** (*Yäliqawənt mäṣaḥəft*, 'The Books of the Doctors').

According to Ricci (RicLett 839, n. 17), the H.a. was translated before 1577, since it is quoted in the ↗*Mäzmurä Krəstos*. Isenberg (1841:198) holds that the translation is by Mäbaʾa Ṣəyon son of *ras* ʿAmdu and that it was done during *aṣe* Gälawdewos's reign (1540–59). This statement has been repeated by many scholars; however, no manuscript shows evidence for this attribution.

Graf has made an exhaustive analysis of the Arabic Coptic compilation and given references to Greek texts that have served as a source for its elaboration. However, neither the H.a., nor its Arabic Vorlage have been hitherto critically edited. The only edition is that of the Gəʿəz text with its Amharic translation, prepared within the Patriarchate of the Ethiopian Orthodox Täwaḥədo Church (1967 A.M.).

At the beginning of the 17th cent., the H.a. acquired importance in the context of the controversies with the ↗Jesuits, who considered it as the most important book in connection with the Ethiopian creed at that time. For this reason, they did not attack directly the Fathers' writings, and Pedro ↗Paez even made use of them to defend the Catholic doctrine (BecRASO, vol. 3, 430; vol. 6, 235; vol. 11, 328), while Father Antonio ↗Fernandes said that he made some corrections in it between 1622 and 1624, erasing the "blasphemies" against Pope Leo and the Council of ↗Chalcedon (BecRASO, vol. 11, 510; vol. 12, 55).

Those controversies have been studied by Cerulli, who also gave trails for the study of the different recensions of the H.a. (Cerulli 1942). According to him, four states could be found: the "primitive" one; the Jesuits' one; a "monophysite" version which would be contemporaneous to the Jesuits'; and finally the "revised" version, corrected after the departure of the Jesuits. Unfortunately, as the indication that manuscript Paris BN Eth. 111 would date from the 16th cent. is quite uncertain, the earliest manuscripts known are from Emperor Yoḥannəs's reign (1667–82): ms. EMML 3459, dated 1671, from Yäǧǧu, Wällo; ms. EMML 1 which had formerly belonged to Məṭraha Maryam church at Lake Ṭana (Heldman 1993:242) and ms. Ṭānāsee 182, from Qaḥa Iyäsus, Gondär (SixTana III, 247–50). Those last two are illustrated with a frontispiece miniature of the 318 bishops at the Council of Nicaea, then with portraits of each of the 37 patriarchs. Also decorated similarly are the two following volumes: Śəllase church, in Ç̣äläqot (Heldman 1993:243), probably from the beginning of the 18th cent., a volume belonging to Gondäročč Giyorgis church, Gondär (Leroy 1967). Finally four other volumes of the end of the 17th cent. are known: a manuscript used by Graf, ms. Tübingen aeth. 18, dated 1688, belonging to the Enno Littmann collection and now preserved in Halle; ms. BritLib Orient. 784, dated from 1695 (WrBriMus 232ff.); EMML 2051, 17th cent., Ḥayq Ǝsṭifanos; EMML 4753, 17th cent., Boru Śəllase, Täkʷəlädäre, Wällo.

As far as the liturgical use is concerned, all the services of Holy Week, until the vigil of Easter Sunday, include lessons from the H.a. (↗*Fasika*; ↗*Gəbrä ḥəmamat*). At Mass, it is often read during the communion of the clergy.

The H.a. should not be confused with **ሃይማኖተ፡ አበው፡ ቀደምት** (*Haymanotä abäw qäddämt*, 'Faith of the Ancient Fathers'), the title of an Amharic history of the Ethiopian Orthodox Church produced by two generations of Ethiopian scholars: *däbtära* ↗Kəflä Giyorgis and ↗Kidanä Wäld Kəfle.

Haymanotä abäw

H.a. (**ሃይማኖተ፡ አበው**, 'Faith of the Fathers') was a religious association of college students. It was set up in November 1957 by Orthodox Christian students from the three colleges then existing in Addis Abäba, the University College, the Engineering College and the Building College (today all part of the ↗Addis Ababa University). The Association's scope was the deepening of religious knowledge with the help of new scientific and philosophical ideas and the preservation of religious traditions, hence its name.

Those who drew up the initial constitution of the Association were: Asfaw Damte, Ǝste Gännät Zäwde, Getahun Nägaš, Ḫaylu Fulas, Näbyat Täfäri, Taddäsä Täʾammərat, Yäšimmäbet Ǝmaññu and Zäwdnäh Yəmtatu. The latter and Taddäsä Täʾammərat became the first officers of the H.a. as President and Secretary, respectively. A representative was also assigned for each of the colleges in order to facilitate co-ordination of the activities of the colleges with the overall central body, as well as with one another.

The primary object of the H.a. was to educate its members in the fundamentals of their religion. This was achieved through conducted evening classes under a teacher thoroughly versed in the teachings of the ↗Ethiopian Orthodox Täwaḥədo Church and one who took account of the special needs of the college students. *Abunä* ↗Tewoflos, then the deputy Patriarch, assigned three successive teachers for the University College, the third being Paul Verghese, from the Indian Orthodox Church of Malabar and versed in Amharic.

In the spring of 1958, after an invitation by the Patriarch of the Indian Orthodox Church through a letter to Ḫaylä Śəllase, the H.a. sent two delegates to attend the Golden Jubilee of the Indian Orthodox college students association. It also organized a conference attended by the Patriarch and other prominent leaders of Church and state. These activities brought the H.a. to greater public notice.

However, with the coming of the *Därg* and its anti-religious policies, H.a.'s activities were severely curtailed and eventually the Association became dormant. After the fall of the *Därg*, during the first years of the 1990s an attempt to reactivate it faced the opposition of the Patriarch. In its place a youth association named *Maḫbärä Qəddusan*, having a wider scope and under the lead of the Patriarchate, was established sometime in 1993–94.

Asfaw Damte

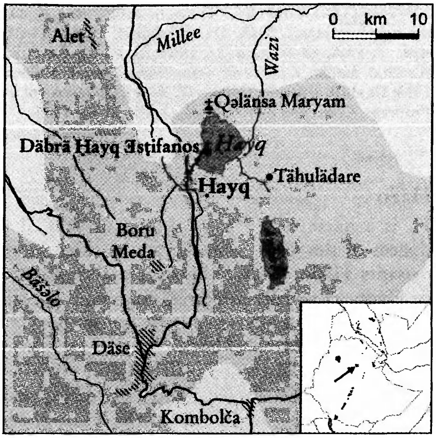
Ḥayq

Lake Ḥ. (**ሐይቅ**) is located 60 km north of ↗Däse and east of the Mäqälä road in Amhara *kəlləl* (currently South-Wällo zone, ↗Ambassäl). The diamond-shaped lake lies at the bottom of a formerly eroded volcanic crater. This intensively cultivated depression towers in a 500 m escarpment above the lowlands of Wärräbabbo, which form a balcony high above the ↗ᶜAfar Triangle. In Amharic, *ḥayq* means 'lake' (cp. Gəᶜəz *ḥayq* 'seashore, riverbank'); hence the designation Ḥ. Ǝsṭifanos ('Lake Ǝsṭifanos'), after the name of the venerable isolated Ǝsṭifanos monastery (↗Däbrä Ḥayq Ǝsṭifanos) located on the island of the same name.

The waters of the lake come from an outlet of Lake Ardibbo, to the south, and its surface can vary as much as 40 %, according to the rainfall. Its waters leave the lake through the ↗Millee, crossing the highlands until they join the ↗Awaš in ᶜAfar. Its once-marshy shores support between 150 and 200 inhabitants/km^2 (5-9 persons per cultivated km^2) and have recently seen the development of agriculture irrigated through water-pumps. The proximity of the urban markets of Däse (130,000 inhabitants) and Kombolča (63,000 inhabitants) offers good opportunities for vegetable production.

The reputation of Ǝsṭifanos monastery in Ethiopian history since the 13th cent. and the impressive scenery of the lake are an attraction for many pilgrims and tourists. A new road leaves Ḥ. eastwards and joins the ᶜAsäb road below the town of ↗Bati, the largest market in Ethiopia. The town of Ḥayq (11,000 inhabitants) lies next to the track leading to the lake branches off the main road. It offers a few hotels, garages, petrol stations, various shops and *wäräda* Tähuladare (↗Täkʷəlädäre) office buildings. The road to the north, the former Italian *Strada della Vittoria*

Lake Ḥayq; photo courtesy of Marie-Laure Derat



(‘Road of the Victory’) has lost some of its importance since the independence of Eritrea.

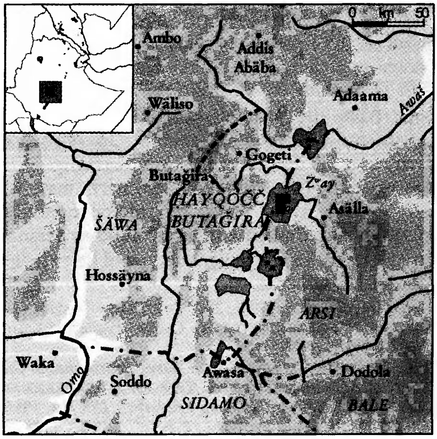
Ḥayqočč-Butağira

Ḥ.-B. (**ሐይቆችና፡ ቡታጂራ**, *Ḥayqoččənna Butağira*, ‘Lakes and Butağira’) *awrağğa* was, together with the ↗Kämbata [and Hadiyya] and ↗Čäbo-Gurage *awrağğas*, one of the southern sub-provinces of Šäwa province. Ḥ.-B. covered ca. 10,900 km² in the region south of the Awaš river between the edge of the Gurage – Kämbata highland range or the Bilate (Weera) river, respectively, and the Rift Valley lakes (Lake ↗Qoqa, Lake ↗Zʷay, Lake ↗Langano, Lake ↗Abyata, Lake ↗Šala and Lake ↗Awasa). The population of the *awrağğa* was ca. 489,400 inhabitants in 1970 and increased to 1,288,178 in 1984 (CSO 1971; CSA 1984).

From its integration into the Ethiopian Empire till the Italian occupation, the north of the region was part of ↗Gurage province (administrative centre: ↗Wäliso) and the south was part of Kämbata province (administrative centre: Hosaʾəna [↗Hossäyna]). Under Italian rule the region was integrated into the “Galla e Sidama” *governorato*, the north becoming the sub-province “Residenza dei Guragè Orientali” (administrative centre: Gogeti near ↗Butağira), the south the “Residenza del Cambátta” (administrative centre Hosaʾəna). In 1962 the whole area became part of Šäwa province under the name of Ḥ.-B. (BrHad 353, 357, 360, 369; Guida 548). Ḥ.-B. was suspended as a administrative unit during the re-organization of Ethiopia’s administrative divisions after the fall of the *Därg* regime.

Ḥ.-B.’s administrative capital was ↗Adamii Tulluu (s. EAE V) at the southern shore of Lake Zʷay, later Mäki in the north of the lake and finally the newly founded town of Zʷay. In the 1960s the *awrağğa* consisted of seven *wärädas* (administrative centres and number of sub-districts in brackets): ↗Mäsqan (Koto, 2), ↗Səlṭi (Qəbät, 2), ↗Soddo (Buʾi, 3), ↗Alaaba [1970 Alaaba Qolito] (Qolito, 2), ↗Nagallee (Nagallee, –), Adamii Tulluu (Adamii Tulluu [in 1970 Mäki], 3), Šašämänne (↗Šašämänne, 2) [CSO 1964:183; 1970:198].

The composition of the population of Ḥ.-B. *awrağğa* was characterized by ethno-linguistic diversity. Highland East Cushitic was represented by the Hadiyya (subgroups of Šaašoogo and Baadaawwaččo were partly, and Maraaqo fully included into the *awrağğa*) and Alaaba. Lowland East Cushitic-speakers in H. and B. were the Arsi and Ğəle (↗Tuulama), East Gurage was spoken by the different Səlṭi groups and other Gurage languages were represented by Mäsqan, ↗Dobbi (↗Gogot) and the Kistane/↗Soddo.



Islam is predominant in most of the area. It is traditionally linked to the Muslim centres of Abrät (Čaha Gurage), Qoliṭo (Alaaba), Alkäso (Səlṭi) and ↗Šayḫ Ḥusayn in Bale. The Orthodox Church has its strongest following among the Mäsqan and Kistane.

The region of Ḥ.-B. had long great importance as a passage-way for trade as well as migration. The route via Maraaqo, Qəbät and ↗Wəlbaräg into the Hadiyya and Kambaata highlands, which is more or less similar to the all-weather-road of today, has long been a caravan route (especially for the trade in ivory, slaves and coffee from the south), connecting central Šäwa with Wälaytta.

Hayyuu

H. is an honorary Oromo title traditionally given to holders of secular offices who had been chosen by consensus and had specified responsibilities, such as *hayyuu gosa*, H. of a moiety or clan; *hayyuu* ↗*hariyyaa*, H. of an age-set; *hayyuu adu-ulaa*, H. of the council. Some were selected for life and some for periods of some years, but all were expected to be wise, knowledgeable, experienced and devoted to the maintenance of custom and peace ↗*aada*, *nagaa* (↗Greetings) through their wise counselling and sagacious judgements. Nowadays, H. is commonly used colloquially as 'judge' (Leus – van de Loo – Cotter 1992:109), 'eliticist, intellectual or wise' (TilDic 298) or 'member of council of elders' (GraggDic 205).

It is possible to delineate the portrait of the sage from the prominence which the notion occupies in Oromo ↗proverbs. In terms of frequency of occurrence, it ranks amongst the keywords most employed. Sagacity may be acquired in many ways: by inference, study, through suffering, moulding by another person, by the heart. Such a sapiential type of knowledge diminishes violence.

Hazo

H. is a name of a ↗Sāho sub-group and of a dialect of the Sāho language; it has three more variants: Ḥádo, Ḥádu or Ḥázu. The forms Ḥádo or Ḥádu are usually preferred, so as not to recall the day when the two brothers ᶜUmar "Tarūᶜá" and Aḥmad "Ḥazwān" had to "cut" (*ḥaz*) in two the flock they shared. This division occurred in a place called Lā Ḥazén ('cows divided'), near Mount Gadam. Traditionally, the H. wander during the winter from Mount Wangābo, south of Iḍāfalu, to *wadi* ᶜIndēli (Asad), which is the limit of their seasonal migration in summer. The H. neighbour the ᶜAfar Balᶜossuwa to the east. According to the Italian census, the H. numbered around 3,000 in 1931. They are divided into seven lineages (*gaysa* or *fire*): ᶜAsa ᶜAlīla (or ᶜAsa-Alila), ᶜAsa-ᶜAli *gaysa*, Konsubi *fire*, Ḥammadi *gaysa*, Maḥammad-Kayyūya, Mūsabbago and ᶜUmarto. The H. and the Saho Tarūᶜa are linked genealogically with the ᶜAfar ↗Ḥasoba.

According to a recent hypothesis the H. might be identified with the Ḫasa of an inscription by King ↗ᶜEzana (DAE no. 11 [=RIÉ 189.9]), as well as with the Ḫāsu of Ibn Ḥawqal (Kramers 1930:55f.), whose name might have survived in the Təgrəñña toponym Ḥasa Zäga (↗Hazzäga; Lusini in StudAeth 73ff.).

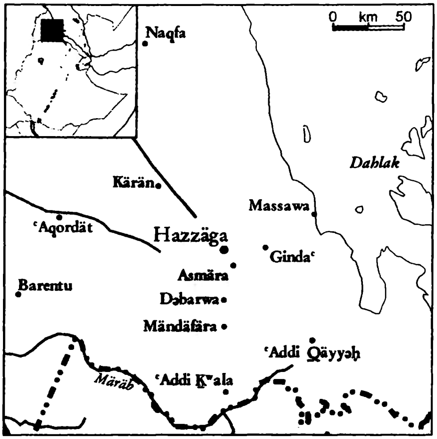
Hazzäga

H. (**ሀዘጋ** [cp. ↗Hazo]; 15'N, 38'E; 2,129 m A.S.L.) is today a village of ca. 2,000 inhabitants, belonging to the Minabä Zärᵓay descent group, in the ↗Däqqi Täššəm district in Ḥamasen, Eritrea.

Historically, H. was the seat of a branch of the Däqqi Täššəm dynasty of ↗Ḥamasen rul-



ers, called Ǝnda Hazzäga ('House of H.'), which competed with the other, more dominating branch of nearby (Ǝnda) ↗Ṣäᶜazzäga. Oral tradition reports that the dynasty's 17th-cent. ancestor Täsfa Ṣəyon was a native of H. It was in his time that the rivalry between the two settlements initiated; his two younger sons founded Ṣäᶜazzäga, while the older remained in H. Power came into the hands of the younger branch, but the Ǝnda Hazzäga retained claim to governorship.

In the 18th cent., a descendant of the H. branch, *käntiba* Qälätä, was briefly put into power by the ruler of Təgray, *ras* ↗Mikaᵓel Səḥul. This revived the old claim, culminating in a bloody struggle between the family of his grandnephew *ayte* Sälomon (son of Zärᵓay, who ruled Ḥamasen for over 40 years) and the house of Ṣäᶜazzäga in the 19th cent. After the death of his father, Sälomon claimed the governorship by succession. He was followed by his widow ↗Ǝllen as the regent of Ḥamasen in the 1850s (in the name of her young son ↗Wäldä Mikaᵓel). The long, sometimes interrupted, governorship of their rival, *däǧǧazmač* ↗Ḫaylu Täwäldä Mädḫən from Ṣäᶜazzäga, was marked by the fierce blood-feud led by *ras* Wäldä Mikaᵓel. He always rose to power when Ḫaylu was deposed (e.g., in 1868 and in 1875).

A number of local leaders of different districts and descent groups of Ḥamasen in his time built houses in H., to be present at the governor's court.

A crucial moment for the final fall of both houses, however, was the year 1876, when Wäldä Mikaᵓel declared himself and Ḥamasen subject to Egypt in order to consolidate his rule. In the following battle of Wəkkidəbba, his rival lost his life, he himself had to flee from the Təgrayan armies. The governorship was then in the hands of appointees from Təgray and thus lost for ever. In July 1889 H. was burnt and pillaged by *däǧǧazmač* ↗Ḫadgä Anbäsa, by then in Italian service, and subsequently brought under Italian rule (KolTrad III, A110; KolTrad II, 198f.).

The ancient rivalry between both houses deeply influenced the development of the ↗Märäb Məllaš and also dominates the traditional oral historiography, the most monumental documentation of it being called **ዛንታ፡ ጸዐዛጋን፡ ሀዘጋን** (*Zanta Ṣäᶜazzägan Hazzägan*, 'The Story of Ṣäᶜazzäga and H.'), collected and translated by Johannes ↗Kolmodin in the early 20th cent. (KolTrad). The last chapter of the collection is concluded with a note on the end of the rivalry between two "houses". This was ended in the time of Italian colonialism, but was to revive one day in the future, in a battle near ᶜAddi Yaqob "before the arrival of Tewodros", the mythical leader who would bring eternal peace to Ethiopia (KolTrad II, 204; ↗*Fəkkare Iyäsus*).

Wolbert Smidt

Coup d'état 1916

Lǝǧ ↗Iyasu, son of *ras* Mikaʾel Ali of Wällo and grandson of *aṣe* Mǝnilǝk II, became a de-facto ruler of Ethiopia after the death of *ras* ↗Täsämma Nadäw in 1910. With the growth of his power, the Šäwan party, lead by *fitawrari* ↗Habtä Giyorgis, *ras* ↗Wäldä Giyorgis and probably *däǧǧazmač* Täfäri Mäkʷännǝn (later *aṣe* ↗Ḫaylä Śǝllase I), among others, grew afraid of losing its central position in the country. The international context of ↗World War I and the ruler's support for the Central Powers was also of some meaning for the Šäwan party, mostly connected with the Allies. The Ethiopian Orthodox Church felt at the same time threatened by the pro-Islamic sympathies of *lǝǧ* Iyasu.

As a result, in 1916 the nobles and clergy used Iyasu's visit to Harär for a coup. At a meeting on 27 September in Addis Abäba, they accused *lǝǧ* Iyasu of betraying both Mǝnilǝk's will and the Christian religion. They proclaimed Mǝnilǝk's daughter ↗Zäwditu the new Empress and Täfäri Mäkʷännǝn the Heir to the Throne, with the title of *ras*. *Fitawrari* Habtä Giyorgis became the third member of the triumvirate. On 11 February 1917, Zäwditu was crowned Empress (*nǝgǝśtä nǝgǝśtat*). The Wällo army led by *ras* Mikaʾel was defeated by Šäwans under *fitawrari* Habtä Giyorgis at ↗Sägäle on 27 October 1916. *Lǝǧ* Iyasu would spend the next years hiding until he was arrested and imprisoned in 1921.

Hanna Rubinkowska

Coup d'état 1960

On 13 December 1960 A.D., Brigadier General ↗Mängǝśtu Nǝway, commander of the Imperial Bodyguard, and his younger brother ↗Gǝrmame Nǝway, governor of Ǧiǧǧiga province, occupied the imperial palace in Addis Abäba. Their supporters included General ↗Mulugeta Buli, former Imperial Guard commander and personal Chief of Staff to the Emperor, *aṣe* ↗Ḫaylä Śǝllase I; Brigadier General Ṣǝgge Dibu, Chief of Police; Lieutenant Colonel ↗Wärqǝnäh Gäbäyyähu, chief of security; and Getaččäw Bäqqälä, Acting Minister in the Marine Department; and parts of the Imperial Bodyguard's rank and file.

On 14 December 1960, the rebels detained *alga wäraš* ↗Asfa Wässän Ḫaylä Śǝllase, announced the overthrow of *aṣe* Ḫaylä Śǝllase who was in Brazil on a state visit and appointed *alga wäraš* Asfa Wässän Ḫaylä Śǝllase as the new Emperor. The rebels also appointed *ras* ↗Ǝmmǝru Ḫaylä Śǝllase, *aṣe* Ḫaylä Śǝllase I's cousin, as premier for a government that advocated an 11-point socialist and nationalist program under a constitutional monarchy. Major-General ↗Märǝd Mängäša, chief of staff of the armed forces, and Major-General Käbbädä Gäbre, chief of ground forces, opposed the rebels. The rebels sought to avoid a battle by opening negotiations with these two loyalist officers through the US military attaché. However, Märǝd Mängäša and Käbbädä Gäbre used the interlude to gather reinforcements.

On 15 December 1960 Märǝd Mängäša announced that troops had deployed throughout Addis Abäba and called on all Ethiopians to remain loyal to the Emperor. The following day, he declared that the C. had failed. On 17 December 1960 countless thousands of Ethiopians lined the streets to welcome the Emperor's return. However, fighting continued on the outskirts of Addis Abäba for some days. On 21 December 1960 the authorities captured Getaččäw Bäqqälä while Mulugeta Buli, Ṣǝgge Dibu, Wärqǝnäh Gäbäyyähu committed suicide. On 24 December 1960 soldiers killed Gǝrmame Nǝway and captured Mängǝśtu Nǝway.

On 12 January 1961 the Emperor pardoned all Imperial Guard privates and non-commissioned officers who had participated in the C. but indicated that officers would be placed on trial. Two officers eventually received prison sentences of 15 and 10 years respectively. On 30 March 1961 Mängǝśtu Nǝway was hanged in a public square in Addis Abäba. The failed C. attempt resulted in numerous casualties in the armed force (29 killed; 43 wounded), Imperial Guard (174 killed; 800 wounded) and among the civilian population (121 killed; 442 wounded). At least seven foreigners also died in the fighting.

The events that led to the C. attempt centred on dissatisfaction with the growing corruption, inefficiency and incompetence of the Imperial government. The C. plotters also expressed sympathy for the plight of the landless peasants and believed they could be freed from exploitation by a more socially conscious government.

The most important consequence of the C. concerned its impact on Ethiopia's intelligentsia, students and armed forces, all of which became more convinced that a more modern, responsive government would ensure social and economic progress for all Ethiopians.
